California Agricultural Statistics Districts by County

Agricultural Overview

California agriculture experienced a 15 percent increase in the sales value of its products for 2011. The state's 81,500 farms and ranches received a record \$43.5 billion for their output last year, up from the \$38.0 billion reached during 2010.

California's increase in revenue was led by the dairy sector. Dairy producers received a record \$7.68 billion for their milk production in 2011, up 30 percent from 2010, and 5 percent above the previous high reached in 2007. Milk production from the state's dairy farms increased 3 percent. Milk prices received by producers rose from \$14.69 per hundred pounds of milk sold in 2010 to \$18.54 in 2011. California once again led the nation in milk production and produced 21.1 percent of the nation's milk supply last year. Milk prices rose during the beginning of 2011, peaking in the summer months. Prices weakened towards the end of the year. The higher price of milk was offset by record high feed costs, which created some hardship for California dairies in 2011.

California remained the number one state in cash farm receipts in 2011, with its \$43.5 billion in revenue representing 11.6 percent of the U.S. total. The state accounted for 15.0 percent of national receipts for crops, and 7.4 percent of the U.S. revenue for livestock and livestock products.

California's agricultural abundance includes more than 400 commodities. The state produces nearly half of U.S.-grown fruits, nuts, and vegetables. Across the nation, U.S. consumers regularly purchase several crops produced solely in California.

Top 5 Agricultural States in Cash Receipts, 2011

State	Rank	Total Value Billion Dollars
California	1	43.5
Iowa	2	29.9
Texas	3	22.7
Nebraska	4	21.8
Illinois	5	19.8

Notable Increases in California Cash Receipts:

Cottonseed	159%
Barley	92%
Wheat	80%
Hay	68%
Cotton	67%
Peppers, chili	45%
Corn	42%
Mohair	41%
Potatoes	41%
Cattle and calves	37%

Notable Decreases in California Cash Receipts:

Olives	-61%
Honey	-33%
Pecans	-32%
Pistachios	-24%
Cherries	-24%
Spinach	-19%
Plums	-18%
Sweet potatoes	-17%
Prunes	-14%
Dry beans	-13%

Crop and Livestock Commodities in which California Leads the Nation 1/

Almonds	Figs	Melons, Cantaloupe	Plums, Dried
Apricots	Flowers, Bulbs	Melons, Honeydew	Pluots
Artichokes	Flowers, Cut	Milk	Pomegranates
Asparagus	Flowers, Potted Plants	Milk Goats	Raspberries
Avocados	Garlic	Nectarines	Rice, Sweet
Beans, Dry Lima	Grapes, Raisins	Nursery, Bedding Plants	Safflower
Bedding/Garden Plants	Grapes, Table	Nursery Crops	Seed, Alfalfa
Broccoli	Grapes, Wine	Olives	Seed, Bermuda Grass
Brussels Sprouts	Greens, Mustard	Onions, Dry	Seed, Ladino Clover
Cabbage, Chinese	Hay, Alfalfa	Onions, Green	Seed, Vegetable and Flower
Cabbage, F.M.	Herbs	Parsley	Spinach
Carrots	Kale	Peaches, Clingstone	Strawberries
Cauliflower	Kiwifruit	Peaches, Freestone	Tomatoes, Processing
Celery	Kumquats	Pears, Bartlett	Vegetables, Greenhouse
Chicory	Lemons	Peppers, Chile	Vegetables, Oriental
Cotton, American Pima	Lettuce, Head	Peppers, Bell	Walnuts
Daikon	Lettuce, Leaf	Persimmons	Watermelons
Dates	Lettuce, Romaine	Pigeons and Squabs	Wild Rice
Eggplant	Limes	Pistachios	
Escarole/Endive	Mandarins & Mandarin Hybrids 2/	Plums	

1/ California is the sole producer (99 percent or more) of the commodities in **bold**.

2/ Includes tangelos, tangerines and tangors.

Farm Facts

In 2011, 81,500 farms operated in California, 3.7 percent of the national total. Over 24 percent of California farms produced commodity sales totaling over \$100,000, compared to 18 percent for the U.S. as a whole. During 2011, California lands devoted to farming and ranching totaled 25.4 million acres, unchanged from 2010. The California average farm size was 312 acres, while the U.S. average farm size was 420 acres.

Land Values/Cash Rents

In 2011, the average value of California farm real estate increased \$200 per acre to \$6,900 per acre. Irrigated cropland valued at \$11,500 per acre increased 4 percent, while non-irrigated cropland valued at \$3,600 per acre increased 3 percent. All cropland was valued at \$9,450 per acre, an increase of \$320 per acre from 2010. Pastureland was valued at \$2,800 per acre for 2011, down 2 percent from the previous year.

Irrigated cropland rental rates were valued at \$335 per acre, a decrease of \$10 per acre from the previous year. Non-irrigated land rental rates were \$50 per acre, unchanged from the previous year. Pastureland rental rates at an average of \$12.50 per acre decreased 4 percent from the previous year.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$35.8 billion in value for 2011. Eleven commodities exceeded \$1 billion in value for 2011. Thirteen of the 20 commodities registered an increase in value from the previous year. Almonds continued their prolific increase in value, surpassing grapes by a small amount to become California's second ranked commodity. Final grower returns could change the sales values for the commodities, resulting in an updated dollar amount in next year's report.

Top 20 Commodities for 2009-2011

Commodity	2009		Value and Rank		2011	
			\$1,000			
Milk and Cream	4,537,171	1	5,928,150	1	7,680,566	1

1/ Carrot, All value for 2009 and 2010. Carrot, Fresh value for 2011.

Weather Highlights for 2011

Early January started with a weak high pressure ridge lying just off the Southern California coast with a fast moving frontal system approaching far Northern California. That system brought heavy rain to the North Coast, with moderate showers across the interior of Northern California. Another fast moving storm then moved across the state, spreading showers across the entire state while gusty offshore winds continued to plague Southern California. After the rain, a ridge of high pressure settled just off the Southern California coast resulting in a more or less stagnant weather regime remaining in place over much of California. This meant cool and foggy conditions across the Central Valley, while Southern California enjoyed sunny and warm conditions. Occasionally, a couple of weak weather systems passing through the Pacific Northwest would brush the North, bringing some showers to the northern coast and interior. The strongest brought measurable rain to the Sacramento and San Joaquin Valleys.

February started with a high pressure ridge developing off the California Coast bringing dry and mild to warm conditions across the state. The San Joaquin Valley would develop persistent morning fog. Still, the weather was warm for much of the state. No significant precipitation was recorded during the first half of the month. A series of weather systems helped bring the state near to or beyond the normal year-to-date precipitation the second part of the month. These systems arrived to the northern half of the state and brought only light precipitation and slightly cooler temperatures. A brief break in the weather followed as this weak system migrated further south. A series of short wave troughs, rotating around a much deeper and colder low, would impact the state, bringing heavy precipitation and much colder temperatures. The cold low pressure system created a variety of weather elements. Small hail and locally intense precipitation to the Central Valley and Sierra Nevadas, snow levels were down to 1,000 feet in the mountains, two feet of new snow fell in some foothill areas, especially near Grass Valley, California. Three to four feet of new snow fell at the highest elevations throughout the mountains and funnel clouds and one F0 tornado were spotted in the Sacramento Valley.

At the start of March, a weak, Pacific frontal system brushed Northern California bringing measurable precipitation to the Central Valley, as well as to the coast and mountains. Strong, high pressure then developed in the wake of this system, and an offshore wind flow brought drying conditions, especially to Southern California. Dry and mild weather was the rule all across California at the start of the week, as a high pressure ridge built over the region. Another cold front approached the Northern Coast bringing widespread showers to the entire state spreading from the North Coast, sweeping south and east across California, and increasing clouds across Northern California. A Pacific ridge of high pressure led to dry, sunny, and increasingly warm conditions through the start of April. Temperatures reached their warmest levels of the year across the state during the apex of this pressure. Soon after, cold unsettled spring low pressure systems moved onto the North Coast, sliding south into the central state and Southern California. Temperatures dropped to much below normal, with some maximum temperatures at 10 degrees below normal for early April. Multiple reports of winds up to 60 mph were reported in Southern California and the southern San Joaquin Valley. Snow levels accumulated throughout the month, the state received fair amounts of precipitation with the heaviest in the Eureka area.

The most prominent features in May were low fronts that dropped along the Pacific coast from the Gulf of Alaska. Cold air with these systems forced the coolest daytime or minimum high, temperatures to Northern California in 100 years. Instability in the cold air behind these systems spawned multiple thunderstorms throughout Sacramento and the San Joaquin Valley. Most of the state including Los Angeles and San Diego received some precipitation. Two confirmed tornadoes occurred in the Sacramento Valley between Willows and Paradise, with extensive tree wreckage and minor damage to a few homes. June started very wet with daytime high temperatures 10 to 20 degrees below normal throughout the state. Continuous rain fell over most of Northern California at one point for 12 consecutive hours, mainly from Fresno northward. Southern California remained dry but cooler than normal. For the second half of the month, the Central Valley remained seasonably warm, with highs mostly in the 80s and 90s while there were isolated shower activities in the mountains of Northern California, and some coastal drizzle and light rain along the immediate Southern California coast.

A vigorous and unseasonably powerful storm system originating from the Gulf of Alaska strafed California and dished out record amounts of precipitation and cold to the northern half of the state to end June and start of the month of July. Precipitation from this system would be sufficient to break records for the entire month of June at many northern sites. Temperatures quickly rebounded with very high temperatures due to high pressure over the state. Highs ranged from 100 degrees to 106 degrees near Bakersfield, it was very hot in the desert region with temperatures ranging from 100 to 119 degrees near Death Valley. This was a typical weather pattern for July in the Golden State. At times though, rain would fall in the Southern California deserts from monsoonal moisture from the Gulf of California. Rain was heavy on occasion, especially near Blythe.

Temperatures tended to be near or a little below normal, and dry conditions prevailed over most of the state throughout August. Often, monsoonal moisture from Mexico would remain south and east of California while a few Sierra locations and some localities on the northwest coast of the state received some precipitation. September saw the familiar weather pattern of high pressures over the Central United States while low pressure troughs laid over the West Coast. These resulted in seasonable temperatures across California with light precipitation as temperatures were rising.

October saw fluctuation in weather patterns. At times, temperatures were ranging from normal to above normal and reflected summer-like conditions. Other times, unseasonably strong low pressure systems spread clouds and precipitation into the state. Coming from the northern Pacific, these systems began spreading moderate to heavy rains across the North Coast then spread across Northern California, bringing moderate to heavy rainfall there and then spread into Southern California where heavy rains were also reported.

At the start of November, a low pressure system passed to the east of California. Cool wet conditions associated with this system lingered, with the heaviest rains being reported across the Western Slopes of the Northern Sierras, the North Coast, and the foothills and mountains of San Diego County. Warm temperature followed throughout the State with some reports of highs in the lower 80s in Southern California. The month ended with unpredictable weather patterns. Cool showery weather followed by warm fronts and fog in between.

December began with a strong and cold but relatively dry, low pressure system through British Columbia moving into the Great Basin and setting the stage for a strong offshore wind event. This pattern brought strong damaging winds to California, with Santa Ana conditions in Southern California. These down-slope winds packed very dry air, and temperatures warmed under the sunny conditions. In fact record high temperatures were experienced in the Sacramento as no significant precipitation was recorded. It also caused concerns about wild fire hazards to the Southland.

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

Field Crops

The total value of California field crop production increased to \$5.46 billion, up 23 percent from 2010. Alfalfa, cotton and wheat had a large impact on California's field crop totals in 2011. In what otherwise would have been a static year for total field crop value, the large increase in these values led to the increase in total field crop value.

Cotton continued to expand in 2011, with acreage and value increasing. The price of Upland cotton was \$1.08 per pound, up 3 percent from 2010. The total value of Upland cotton increased from \$192 million in 2010 to \$280 million in 2011, an increase of 46 percent. California growers planted 274,000 acres of American Pima cotton, up 92,000 from 2010. The American Pima cotton price decreased from \$1.80 to \$1.64 per pound in 2011. The somewhat lower price was more than offset by the increased production and resulted in the value of American Pima cotton growing from \$400 million in 2010 to \$614 million in 2011.

California produced the second most alfalfa hay in the country, slightly behind South Dakota's production. In 2011, California produced approximately 6.07 million tons of alfalfa hay, valued at \$1.44 billion. Production of hay other than alfalfa decreased 7 percent, while its total value increased 54 percent. Total hay production declined 5 percent from 2010, while record high prices increased hay's value 68 percent.

Rice plantings increased by 5 percent, with 585,000 acres planted in 2011. Medium grain rice contributed to 91 percent of the total rice acreage and 93 percent of the total production. While the acres planted and harvested increased, as well as the production, a significant decrease in the price caused the overall value to decrease. The total value of rice production was \$774 million, a decline of 17 percent from the previous year.

California corn for grain production was valued at \$172 million for 2011, a 4 percent decrease from 2010. Harvested acreage and yield decreased while price increased from the previous year. Harvested acreage decreased 17 percent to 150,000 acres; yield decreased 5 percent, but price increased by 22 percent. Harvested acres of corn silage increased by 12 percent to 475,000 acres. Production of corn silage increased to 12.35 million tons, up 10 percent from 2010.

Sixty-eight percent of the California wheat crop was harvested for grain in 2011. Wheat was planted on 790,000 acres and 535,000 were harvested for grain. Overall, production increased 23 percent and value increased 69 percent. The production of winter wheat increased 24 percent from 2010, and Durum wheat production increased 20 percent from 2010. The value of winter wheat production increased 62 percent to \$243 million, and the value of Durum wheat production increased 85 percent to \$116 million.

Notable Increases in Value:

Cottonseed	124%
Hay, All	68%
Wheat, All.....	69%
Barley	59%
Cotton, All	51%

Notable Decreases in Value:

Oats.....	-28%
Potatoes, Sweet.....	-17%
Rice, All.....	-17%

2011	790,000	535,000	2.71	1,447,050	226.67	359,336	

- 1/ Area planted includes preceding fall.
- 2/ Production is on a clean basis.
- 3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.
- 4/ Includes varieties not listed separately. Excludes beans grown for garden seed.
- 5/ Planted acreage is for all purposes.
- 6/ Value derived from Minor Commodities Cash Receipts and updated with previous County Agricultural Commissioner data.
- 7/ Production ginned. Cotton bales are 480 lbs. net-weight.
- 8/ Preliminary Marketing Year Average Price.
- 9/ Estimates began in 2005.
- 10/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.
- 11/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.
- 12/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.
- 13/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.
- 14/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.
- 15/ Beginning in 2010, winter and summer estimates included in spring total.
- 16/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.
- 17/ Excludes wild rice.
- 18/ Estimates began in 2000.
- 19/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

Floriculture

California's floriculture crop leads the nation with a value of \$1.01 billion in sales, comprising 24.8 percent of the U.S. total wholesale value. Sales slightly decreased 0.35 percent from the revised 2010 total. California producers decreased in number from 408 in 2010 to 384 in 2011.

California accounted for 18.5 percent of the total value of annual bedding and garden plants, the highest-valued crop category in the 15-state program. The wholesale value of California grown bedding and garden plants increased 2.4 percent from \$241 million in 2010 to \$247 million in 2011.

California also led the country in potted flowering plant value for 2011, with a total value of \$243 million wholesale, down less than a percent from the 2010 valuation. California accounted for 38.0 percent of the 15-state total wholesale value reported.

California was the dominant State in cut flower production, accounting for about 77.3 percent of the total cut flower wholesale value. The \$278 million in value for 2011 was down 3 percent from the 2010 valuation of \$286 million.

Fruit and Nut Crops

California accounts for 58 percent of the U.S. non-citrus fruit and nut production and 68 percent of the national value. Of the citrus crops, California accounts for 31 percent of the U.S. citrus production and 40 percent of the national value. In total, the state produced 15.7 million tons of fruit and nuts, 49 percent of the national total, down 1 percent from 2010. The state's total production value of all fruits and nuts in 2011 was \$15.3 billion, up 11 percent from 2010.

For the first time ever, almonds overtook grapes as the top valued fruit and nut crop in California. At \$3.87 billion, almond farm cash receipts were slightly higher than the all grape value of \$3.86 billion. California almonds accounted for 100 percent of the nation's almond production, while the California grape crop accounted for 90 percent of the 2011 United States utilized grape production. Crops with record production in 2011 were almonds, dates, table grapes, kiwifruit, other pears, blueberries, and tangerines. California accounted for all or nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

According to the USDA's Economic Research Service, in 2011 California was the number one exporter of agricultural commodities in the United States. Tree nuts were the number one agricultural export for California, followed by fruit and vegetables. The most exported fresh fruit in the United States are apples, grapes and oranges and Canada is the leading destination.

The United States is among the top producers and consumers of fruit and tree nuts in the world. The typical American consumes around 270 pounds of fruit and tree nuts (fresh and processed products) each year. Oranges, grapes, apples, and

bananas are the most popular fruit while almonds, walnuts, and pecans are the most preferred tree nuts.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage, Florida almost twenty percent, and Washington around ten percent.

The value of U.S. tree nut production in 2011 was nearly \$7 billion in annual farm cash receipts, with almonds, walnuts, pistachios and pecans accounting for most of the sales. California is the nation's number one producer of tree nuts. Almonds are closing in on \$4 billion per year in farm cash receipts, and walnuts and pistachios both passed \$1 billion in farm cash receipts in 2010. Over 92 percent of the U.S. tree nut production was harvested from Golden State orchards in 2011.

Notable Increases in California Production:

Raspberries.....	33%
Kiwifruit.....	28%
Almonds.....	24%
Blueberries.....	18%
Pears, Bartlett.....	15%

Notable Decreases in California Production:

Olives.....	65%
Avocados.....	45%
Pecans.....	35%
Cherries, Sweet.....	30%
Pistachios.....	15%

	2010	54,000	---	---	327,000	---	281,326
	2011	39,000	---	---	231,000	---	228,220

1/ Non-bearing shown only in year when acreage surveys were conducted.

2/ Return at processing plant door or packinghouse door.

3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1998-2000 - zero; 2001 - 41,000; 2002 - 27,000; 2003-2010 - zero. These acres were deducted from bearing acres before calculating yield.

4/ Production is the fresh equivalent of dried and not dried.

5/ Acreage by county, variety and year of planting for 2007 are available upon request.

6/ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

1/ Non-bearing shown only in year when acreage survey conducted.

2/ Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value:

2000 - 15.9 million pounds, 2001 - 16.8 million pounds, 2002 - 8.30 million pounds, 2003 - 20.8 million pounds, 2004 - 14.5 million pounds, 2005 - 16.1 million pounds, 2006 - 23.5 million pounds, 2007 - 17.5 million pounds, 2008 - 14.0 million pounds, 2009 - 20.0 million pounds.

3/ Data for 2008 acreage by county, variety and year of planting available upon request.

Livestock and Dairy

California's total livestock and livestock products cash receipts were \$12.4 billion in 2011, up over 25 percent from 2010. Over 70 percent of the change from 2010 was due to the increase in dairy products total value. Accounting for nearly 12 percent of total US livestock cash receipts, California displaced Iowa to rank second nationally, behind Texas. Dairy products remained the state's leading commodity and accounted for 19.4 percent of receipts for US dairy products. Cash receipts made cattle and calves the state's 5th leading commodity in 2011.

The Golden State's dairy industry began to recover in 2011 as the national and global economies strengthened. Milk prices increased substantially with the average price paid to producers up nearly \$4 per hundredweight from the average 2010 price. Prices peaked in June at just over \$20 per hundredweight but ended the year at \$17.38. Higher milk prices helped with margins, but feed availability continued to plague producers. Feed costs, according to the California Department of Agriculture (CDFA) annual cost of production survey, increased from the first quarter of 2011 to the last quarter by over 22 percent. In June and July CDFA held hearings on proposed modifications to the Stabilization and Marketing Plans for Market Milk and amended the Class 4a and 4b pricing formulas effective September 2011. Proposals to reform the dairy industry continued to be floated throughout the year on the national and state level to address the volatility in prices and supply management. Dairy processors also considered the impact of EU regulations on allowable somatic cell counts as negotiations between the USDA and EU stretched through the year before the implementation deadline in March 2012. Cooperatives Working Together (CWT) helped member cooperatives with export sales totaling 92.4 million pound of cheese. CWT membership grew in 2011 to achieve 70 percent participation needed to move forward on the implementation of a voluntary production assessment to fund CWT export efforts. With the unsettled economy, shrinking margins and the pending Farm Bill there was a flurry of activity in the dairy industry in 2011. The year also saw dairies in foreclosure. Some dairies relocated to other states or shut down completely with a net loss of 48 California dairies in 2011, up 11 from 2010 but better than the 100 dairy drop in 2009.

The state's dairy industry is subject to a myriad of environmental regulations. In 2011 San Joaquin Valley dairy producers with 500 or more head had to comply with Air quality regulations to reduce volatile organic compounds (VOCs). Water quality regulations regarding waste discharge were behind the success of the Central Valley Dairy Representative Monitoring Program (CVDRMP) membership growth as this nonprofit monitors well water across nine counties in a cost sharing program. Other regions of the state worked to complete water quality plans and workshops were held to assist producers with compliance. Additionally new dairy operations are subject to the comprehensive California Environmental Quality Act (CEQA).

Since 1993, when it surpassed Wisconsin in milk production, California has been the nation's leading dairy state. Sales of milk and cream contributed \$7.68 billion in 2011. Wisconsin, Idaho, New York, Pennsylvania and Idaho were the next leading states in total milk production. The top five dairy states accounted for over 53% of the total US dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter and nonfat dry milk. California was second in total cheese production behind Wisconsin, though the difference in production between these two states continued to decline. The state ranked 4th nationally in milk produced per cow per year.

California's dairies produced 41.5 billion pounds of milk, accounting for over 21 percent of the nation's milk supply. For the fifth year in a row, all 12 months of 2011 recorded more than 3.1 billion pounds in milk production. Milk utilization continued the trends of 2010 with declines in fluid, soft and frozen products and increases in cheese. California milk going into cheese production increased to 43.1%, an increase of 13.8% from 2010. Mozzarella, which in recent years has accounted for over 50 percent of California cheese production, was responsible for most of the increase in cheese production in 2011.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-producing counties in California accounting for over 71 percent of the state's total milk production were Tulare (27 percent), Merced (14 percent), Kings (11 percent), Stanislaus (10 percent) and Kern (10 percent). Sales of fluid milk in California averaged 29 percent whole milk, 39 percent reduced fat milk, 14 percent low fat milk, 15 percent skim milk and 3 percent half-and-half.

Milk production per cow increased 1.8 percent to 23,438 pounds. California's total cheese production of 2.25 billion pounds was up nearly 2 percent from 2010. United States cheese exports increased nearly 30 percent from 2010 to 224 thousand metric tons per the USDA Foreign Agricultural Service (FAS). Butter exports increased by 10 percent to 65 thousand metric tons. Nonfat dry milk powder exports increased by nearly 14 percent to 436 thousand metric tons. The recent US dairy in roads into Asian markets due to poor weather in New Zealand and Australia were eroded in 2011 as the herd, production and feed supplies recovered with some Australian dairymen reporting the best yields in more than a decade. US suppliers continued to take advantage of the burgeoning Asian market demand for dairy products. According to FAS the volume of 2011's US cheese exports to China and South Korea were up 217% and 183%, respectively. This contributed to the \$4.82 billion of US dairy exports, up \$1.1 billion from 2010. The percentage of annual change in all US dairy product export value for 2011 was up 30 percent, down from the prior year's 63 percent increase.

California cash receipts for cattle and calves increased almost 37 percent from 2010. Sales totaled \$2.83 billion, compared with \$2.07 billion in 2010. Receipts for hogs and pigs were up nearly 9 percent from the previous year. Aquaculture receipts were up 10 percent from 2010.

California's 2011 honey production, at 17.8 million pounds, was 65 percent of the prior year. Producing colonies totaled 370 thousand, down 10 percent from 2010. The yield per colony averaged 48 pounds, compared to 67 pounds produced in 2010 and 33 pounds in 2009. The average price per pound was 161 cents per pound. Though average price per pound was up five cents from 2010, the low production pushed cash receipts for honey down to 67 percent of 2010's total.

The market for lambs and wool was very good in 2011 with exports significantly higher than the previous year. The state's poultry sector continued to be concerned with food safety, rising feed costs and stagnant domestic consumption. Impacts from the 2008 Prevention of Farm Animal Cruelty Act to be implemented in 2015 are not yet apparent as there has not been a significant decline in egg production since the act was passed.

1/ An operation is any place having one or more head of cattle on hand at any time during the year. Percent of inventory reflect average distributions of various probability surveys conducted during the year, but are based primarily on beginning-of-year and mid-year surveys.

2/ After 2007, data will only be published from the Census of Agriculture which is conducted in five-year intervals.

1/ Steers and heifers over 500 pounds (including fed cattle) and slaughter cows.
 2/ Steers and heifers (all qualities) over 500 pounds (including fed cattle).
 3/ Beef cows and cull dairy cows sold for slaughter.
 4/ Steers and heifers (all qualities) under 500 pounds
 5/ Beginning with January 2011, state level cow, calf, beef steer and heifer prices were discontinued.

Grazing Fee Annual Average Rates, 2000-2011 1/

Year	Per Animal Unit 2/	Cow-Calf		Per Head
		Dollars Per Month		
2000	12.30	15.50	12.70	
2001	13.00	16.00	13.50	
2002	12.80	16.50	14.00	
2003	13.50	17.50	14.30	
2004	14.50	19.50	15.50	
2005	15.40	20.50	17.00	
2006	16.50	21.00	17.00	
2007	16.50	21.50	17.30	
2008	17.80	22.10	18.50	
2009	16.70	21.00	17.50	
2010	16.40	20.50	17.00	
2011	17.30	21.50	18.20	

1/ The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833).

Milk Cows, Milk Production and Value, 2000-2011

1/ An operation is any place having one or more head of milk cows, excluding cows used to nurse calves, on hand at any time during the year. Percent of inventory reflect average distributions of various surveys conducted during the year.

2/ Data will only be published during the Census of Agriculture which is conducted in five-year intervals.

1/ Preliminary 2011 data.

2/ Excludes processed cheese and cottage cheese.

3/ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

4/ Includes all cheeses not included in the above categories.

5/ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

6/ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

7/ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink."

Contains less than 10 percent milk-fat required for ice cream.

8/ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

1/ Live weight; adjustments made for changes in inventory and for in-shipments.

2/ Live weight; excludes custom slaughter for use on farms where produced and inter-farm sales within the state.

3/ Receipts from marketing and sale of farm slaughter.

4/ Livestock total does not include sheep and lambs after 2010.

Vegetables and Melons

California continued as the leading fresh market vegetable producing state in 2011, accounting for 44 percent of the U.S. harvested area, 50 percent of the national production, and 52 percent of the value, for the 24 selected vegetables and melons estimated.

Fresh market production increased for artichokes, broccoli, cabbage, cauliflower, sweet corn, garlic, head lettuce, watermelon, summer non storage onions, bell and chili peppers and fresh tomatoes. Fresh vegetable crops with decreased production included, asparagus, snap beans, carrots, celery, cucumbers, romaine and leaf lettuce, cantaloupes, honeydew, summer storage and non spring onions, pumpkin, spinach and squash.

California also led the nation in processing vegetable production during 2011, with 26 percent of the U.S. harvested acreage, 72 percent of the national production and 55 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2011 fresh and processing vegetable and melon production was \$7.4 billion, down from 2010's revised total of \$7.2 billion. Lettuce remained the leading vegetable crop in value of production, at \$1.5 billion, followed by tomatoes with \$1.3 billion.

Vegetable crops that had value increases were artichokes, fresh carrots, cauliflower, celery, sweet corn, cucumber, garlic, head and romaine lettuce, cantaloupe, watermelon, honeydew, agaricus mushrooms, bell and chili peppers, and fresh tomatoes. Crops that had decreased value included asparagus, snap beans, broccoli, cabbage, leaf lettuce, spring, processing, summer storage and non storage onions, pumpkins, fresh and processing spinach and squash.

California's cash receipts for vegetables ranked number one in the nation and accounted for 35.3 percent of the U.S. total. Valued at \$7.4 billion, vegetables represented 17 percent of the state's total cash income from agriculture in 2011.

According to the USDA Economic Research Service, per capita use of vegetables, melons, potatoes, sweet potatoes, pulse crops and mushrooms in the United States increased from 421 pounds in 2010 to 400 pounds in 2011.

Fresh market consumption per capita in 2010 was 170 pounds, 1 percent higher than in 2009. Utilization increased for asparagus, snap beans, cabbage, carrots, eggplant, lettuce, onions, bell peppers, pumpkins, radishes, tomatoes and watermelon. Declining utilization was observed for broccoli, cauliflower, garlic, spinach, squash and honeydew melon.

Per capita consumption of U.S. processing vegetables decreased 2 percent from 122 pounds in 2009 to 120 pounds in 2010. Processing vegetables whose utilization increased in 2010 included snap beans, processing tomatoes and green lima beans. Consumption decreased for processed sweet corn, green peas, cucumbers, spinach, beets, processed cabbage, chili peppers and dehydrated onion.

Notable Increases in Production:

Chili Peppers	45%
Honeydew	33%
Cantaloupes	28%
Fresh Carrots	22%
Watermelon	20%

Notable Decreases in Production:

Spring Onions	26%
Leaf Lettuce	25%
Fresh Spinach	19%
Summer Non Storage Onions	19%
Processed Spinach	17%

1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

2/ Includes both fresh marketing and processing vegetables.

3/ Estimates discontinued in 2002.

4/ Not published to avoid disclosing data for individual farms.

5/ Estimates began in 2000 and discontinued in 2002.

6/ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 2000 to 2009 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.

7/ Estimates began in 2000.

8/ Included in summer storage onions.

9/ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.

10/ Estimates began in 2002.

11/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.

Non-Discrimination Statement

The U.S. Department of Agriculture (USDA) prohibits discrimination in all of its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex (including gender identity and expression), marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Assistant Secretary for Civil Rights, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, S.W., Stop 9410, Washington, DC 20250-9410, or call toll-free at (866) 632-9992 (English) or (800) 877-8339 (TDD) or (866) 377-8642 (English Federal-relay) or (800) 845-6136 (Spanish Federal-relay). USDA is an equal opportunity provider and employer.
