What Can Californians Do About Invasive Species?

Do you farm? Fish? Hike, bike, boat, camp? Garden? Ride horses? Swim, ski, surf, sightsee or birdwatch? Californians resoundingly reply "Yes"—and they do it all without leaving the state. Californians know their home is among the most beautiful and varied places on earth. Its wild ocean beaches, its flowery mountain meadows, its streams and lakes, its rich farmland and unmatched variety of specialty crops—these treasures are in our keeping, the heritage we guard for posterity.

Unfortunately, the same attractions that make California so desirable to us are equally inviting to many invasive species—plants, insects, mollusks, diseases. More arrive every day, courtesy of growing international travel and transport and the disruptions caused by climate change.

Our best response to this influx varies from one species to another, although prevention is always the best approach. When prevention fails, the most effective (and usually the cheapest) way to handle it is prompt action to control and—if possible—eradicate while the problem is still small and localized. Some species quickly become so widespread that ongoing control measures are necessary.

You can help. If you travel, don't bring back food, animals, plants or other articles that might be or might harbor an invasive species. If you see a situation that might lead to a new infestation, point it out. Prevent it. California deserves no less from those who call this unmatched destination "home."

On the Cover

Truckee Inspection Station. The border stations are the first line of defense in our pest exclusion efforts. However, once a pest or disease is detected, then the department must work to eradicate or control the infestation. The Truckee Inspection Station (pictured on the cover and above) works with private and commercial motorists to keep unwanted pests and diseases out of the Golden State.

From 2008 to 2010, the 16 agricultural border inspection stations rejected nearly 121,000 lots of plant materials in violation of state or federal quarantine laws. Of these interceptions, inspectors found and submitted approximately 20,500 specimens to the department's lab for identification. From those interceptions, more than 5,700 were exotic invasive species capable of causing serious damage.

In much the same way our state's firefighters protect people and property, our border stations and staff protect California's food supply from "bio-fires" that can erupt if invasive species are not intercepted.

Asian longhorned beetle.

Tunnels through hardwoods, killing timber, nursery stock, shade trees and others.

Plum pox. A devastating viral disease of stone fruit that can ruin its marketability by causing bitterness and deformities. Tree destruction is the only eradication option.

* **Zebra mussel.** Clogs water systems and crowds out natives; especially prolific—one female can release up to 1 million eggs.

Mediterranean fruit fly. Lays its eggs inside fruit and the emerging larvae tunnel through its pulp, rendering it unmarketable.

* **Japanese dodder.** Aggressive, parasitic plant that can completely engulf and kill host crops, ornamental trees and plants.

* **European grapevine moth.** Larvae of multiple generations feed primarily on grapes and their flowers, exposing clusters to rot and disease.

* Currently found in California.

FOREWORD

By A.G. Kawamura, Secretary
California Department
of Food and Agriculture

In my lifetime—and especially during my seven years serving Californians and Governor Schwarzenegger as the secretary of food and agriculture—I have watched our industry lead the world in progressive cultural practices, marketing concepts and value-added innovations. All of these efforts have helped to make California agriculture more competitive in the marketplace. However, the need for predictable water and labor supplies, a balanced regulatory environment and an active pest and disease prevention, detection and eradication system are critical for success in the years ahead.

This year's California Agricultural Resource Directory focuses on efforts by the department, State Board of Food and Agriculture and stakeholder groups to create clear goals and strategies for a sustainable future. This process is the California Agricultural Vision for 2030; also known as Ag Vision.

continued next page

FOREWORD continued

The initial Ag Vision framework is a set of strategic goals to safeguard California's agricultural and environmental heritage. Included among these goals is the urgent need to build a strong coalition of diverse stakeholder groups and governmental agencies aimed at coordinating cost-effective and environmentally sound ways of preventing harm from invasive species.

In February 2009, we came together to form the Invasive Species Council of California. Using open dialogue and relying on sensible science to determine the best courses of action, our mission is to restore, protect and enhance the environment, and to ensure public health, environmental quality and economic vitality. Invasive species pose a persistent and pervasive threat to that mission.

Invasive species threaten the state's agricultural lands, natural environment, state and national parks, waterways and urban landscapes. This is why six state agency secretaries are members of the council. Agencies represented are the California Department of Food and Agriculture; California Natural Resources Agency; California Environmental Protection Agency; California Business, Transportation and Housing Agency; California Health and Human Services Agency; and the California Emergency Management Agency.

Advising the Invasive Species Council of California is its advisory committee. The committee is comprised of experts representing more than 20 organizations spanning such broad interests as the University of California Cooperative Extension, California Farm Bureau Federation and county agricultural commissioners to the Sierra Club, National Marine Fisheries Service and the Nature Conservancy. Charged with making recommendations to prioritize an Invasive Species Action Plan—a statewide plan for dealing with unwanted species—the committee will help to promote a consistent approach to invasive species at the state level and enhance regional collaboration and inter-state efforts. Education and cooperation are key components to an effective strategy.

As you read the articles in this directory, you will see the tremendous amount of work underway to protect agriculture into the 21st century; whether from an onslaught of pests and diseases that threatens our food supply, environment and public health, or the need to address water security and better access to healthy foods for all Californians.

I have hope for great progress. With so many thoughtful and concerned individuals and organizations committed to this effort, I see some vibrant and dynamic recommendations coming forward from Ag Vision and the Invasive Species Council and Invasive Species Advisory Committee. An important step is for everyone to remain actively engaged in this process. California agriculture must have a clear consensus on where it wants to go. Then, we must understand who can help us to get there. Strategic outreach and collaboration with non-agricultural partners can be of great benefit; because, in the end, all Californians have a stake in the food and necessities of life that come from agriculture.

Working together, I believe we can create solutions from the land for a better California. Thank you for doing your part in creating and implementing a sustainable systems approach for our collective future.

Finally, it has been one of the greatest joys in my life to serve as secretary and to serve the people of our great state. I will take away from this experience great memories and satisfaction for the accomplishments of this administration in ensuring that agriculture in California is stronger and better positioned to succeed in the coming years. Most of all, I want to say what a pleasure it has been to get to know and work with all the many people in our state who have made California agriculture the envy of the entire world.

CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE EXECUTIVE TEAM, 2010

Members of the department's executive team work in partnership with industry, academia and government to adapt public policy to a rapidly changing and innovative industry – California agriculture. They seek to protect and promote the abundant products of this vigorous and vital sector of our economy.

In memoriam:

Will Brown, Undersecretary, October 2008–September 2010
David Nunenkamp, Deputy Secretary for Legislation, December 2003–June 2006

We wish to extend our thanks to all the dedicated employees of the California Department of Food and Agriculture, as well as California's county agricultural commissioners, and the men and women who work diligently in agriculture to provide the abundance and quality that have become a hallmark of our industry.

California is a land of unmatched beauty, scenic wonders and agricultural abundance. Yet, we are always challenged by forces, both natural and man-made, that can mar these iconic qualities of our great state. Forces such as invasive species threaten to disrupt and damage our ecology, which in turn will have devastating effects on all of us. For this reason, we have created both a high-level government council on invasive species and an advisory committee. The following articles will provide you with an overview of these efforts. For more information visit www.iscc.ca.gov.

Protecting Our Heritage: Involving the Public in Invasive Species Efforts

We live in an age of \$49 flights, overnight deliveries and international shopping at the click of a mouse. People and stuff are moving around the globe faster and more frequently than ever in our history. These advancements certainly enhance our society, but what are the risks involved in moving so much, so fast?

One cost that seems to be rising on pace with globalization is the cost of dealing with invasive species. Sure, growers have to deal with insect pests and ranchers have to thwart livestock diseases, but is that all there is to the equation?

Of course not. And that's where the California Invasive Species Advisory Committee (CISAC) comes into the picture. This committee advises the Invasive Species Council of California (ISCC), which is led by California's secretary of agriculture and includes the appointed leaders of the California Natural Resources Agency; California Environmental Protection Agency; California Business, Transportation and Housing Agency; California Health and Human Services Agency; and California Emergency Management Agency. That list alone should indicate pretty clearly that the impacts of invasive species are felt far beyond the fences of our state's farms and ranches.

The council was formed in February 2009 and represents the highest level of leadership and authority in state government regarding invasive species. The advisory committee is made up of stakeholders and is designed to take input from local, federal and tribal governments as well as environmental organizations, academic and scientific institutions, affected industry sectors, impacted landowners and concerned citizens. The committee and council dedicated their initial efforts to developing a "California Invasive Species List." Next steps include working from that list to develop and implement an Invasive Species Strategic Framework and related documents that will serve as a roadmap for prevention activities as well as response plans when invasive species are detected.

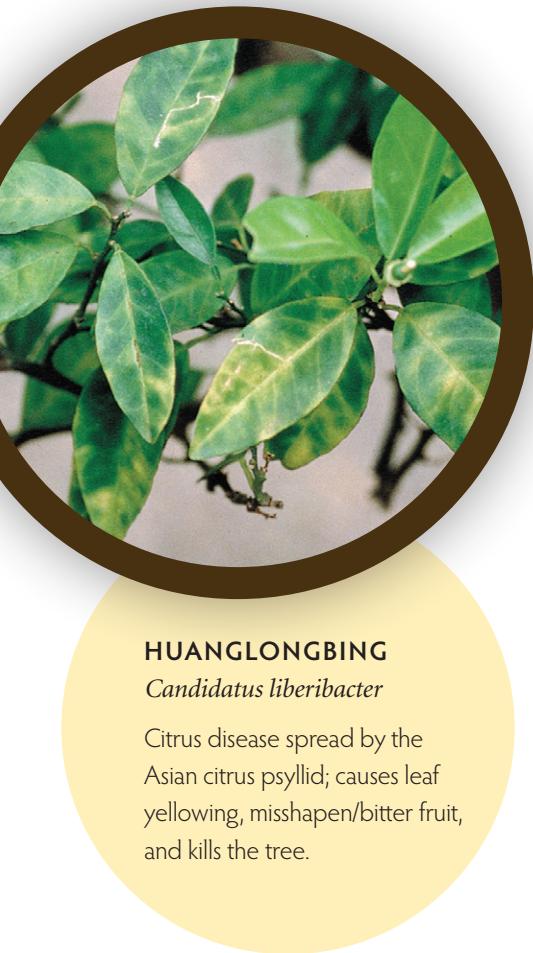

It's a long-term project, to be sure, but it has begun in earnest and is already bearing fruit. The council and committee have produced a video and published a booklet and poster that are designed to spread the word about invasive species and our collective responsibility in preventing their

Citrus disease spread by the Asian citrus psyllid; causes leaf yellowing, misshapen/bitter fruit, and kills the tree.

introduction to our state. One thing that all involved can agree on is that the public's help is urgently needed to deal with the waves of invasive species already rolling up on California's shores.

Zea Sonnabend, a CISAC member and policy specialist with California Certified Organic Farmers, points out that it's not a one-size-fits-all situation: "Some of the species are really significant in that they can harm wild plants as well as our crop plants, or cross a lot of different crop species, whereas others are very limited in scope as to what they're affecting."

Doug Johnson, CISAC chair and executive director of the nonprofit California Invasive Plant Council, explains: "'Invasive species' is a pretty specific term and it is misinterpreted frequently. There are two factors that define an invasive species: one, it's not from here, so somebody has brought it actively to California, particularly from another continent, either by accident or on purpose; and two, an invasive species is a non-native species that has an impact here—that has a cost to us through the environment or the economy."

The most predictable and quantifiable costs of invasive species happen in agriculture, where farmers can easily track the costs of quarantines and impacts on crop yields and quality. However, invasive species are a problem that requires a dynamic response, not only by farmers and public servants, but also by stakeholders and the general public. But how aware are Californians that invasives are a problem, let alone what to do about it?

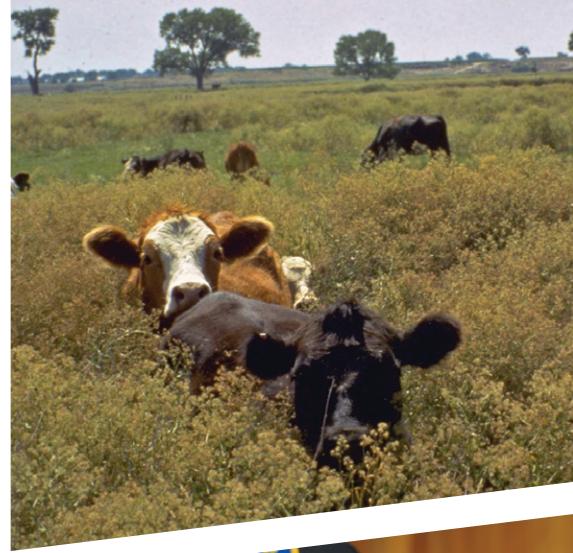

Advisory committee member Andrea Fox, legislative policy analyst for the California Farm Bureau Federation, says: "It is important for farmers and environmentalists to work together on the invasive species problem. Because it's not just a farm problem, it's a problem for all Californians. It impacts our beautiful natural landscape; it impacts the food and fiber that we depend upon to survive.

"We have become very accustomed to beautiful fruits and vegetables and agricultural products... We have become very accustomed to beautiful park lands and beautiful landscapes... I'm sure if you ask a Californian if they wanted to maintain those, their answer would be yes, yes."

CISAC member Joe DiTomaso, a UC Davis cooperative extension specialist in weed control, has seen progress in terms of public awareness. "In the past 15 years, the awareness of invasive plants has increased tremendously. We still have a long way to go, but it's been a tremendous amount of recognition on the issues related to invasive plants through legislators, land managers and even in some aspects of the general public. Invasive species can impact their lives tremendously today, but will impact the lives of their children and their grandchildren even more so in the future if we don't do anything about it."

Officials working in the arena of invasive species are unanimous that the public's help is needed, just as they are in agreement that the public is a significant source of the problem.

"I'm not against suburbanization at all," says Kristina Shierenbeck, CISAC member and professor of botany at CSU Chico. "I think that it's part of what

we do as humans. But we need to realize that everything we do has an impact and that we need to mitigate those impacts. We're in California because we love this place, most of us, and we want to conserve its beauty, and part of that requires the responsibility of each citizen to do their part."

"As we continue to develop our society, we move more," echoes fellow advisory committee member Ricardo De Leon, who serves as microbiology unit manager for the Metropolitan Water District. "We go to more places, we travel, we like to have a lot of different activities and the risk of moving invasive species increases with that."

When it comes to invasive species, CISAC member and Sierra Club volunteer Victoria Brandon says it's not merely a matter of the government telling people that they have to comply with certain rules or refrain from certain activities. "People do not want to be told what to do and what to think. They want their views and their concerns to be part of the dialogue," she offers. "So we're trying, on our committee, to develop ways in which we can foster dialogue as ... the core of our educational outreach."

So what can we do, as an agricultural industry, as public servants, as volunteers with an interest in preventing invasive species from damaging our state? "Act locally" is one popular theme, as advisory committee member David Pattison points out. As part of his work on the board of the California Association of Pest Control Advisors, Pattison was involved in a project that put plant pathologists in elementary classrooms, and the results were fantastic.

"A few years ago we started an outreach program with third, fourth and fifth graders where we went into the classroom and spoke about pesticide- and food-related issues, and I think that's an incredibly effective means of outreach," Pattison said. Any time you can get kids thinking and talking about where their food comes from, and how their own activities can affect the safety of their food supply and the protection of their environment, you're on the right track.

Committee member John Randall, who works as the associate science director for the Nature Conservancy, advises that the public needs to be encouraged that they can make a difference, even in the face of a seemingly huge task. "When people learn about the problem, they learn how widespread it is and how multifaceted it is, they can become discouraged and

photos, clockwise from top left:

Hydrilla: An invasive, non-native, water plant. It reduces water storage and movement, damages fish and wildlife habitat. First found in California in 1974, it has been successfully eradicated 22 times and several other eradication efforts are ongoing.

Yellow star thistle: A plant that likely arrived in California in the mid-1800s. It currently infests more than 12 million acres and pressures 48 threatened and endangered plant and animal species. It is one of California's worst noxious weeds infesting rangeland, pastures, hay fields, orchards and other disturbed areas. Program activities are focused on slowing the spread and minimizing its impacts.

Border inspection: Dan Rudolph, station manager of the Truckee Inspection Station, finds a wood boring pest inside a load of firewood.

think there's not much we can do, but that's not true ... We can prevent new invasions fairly simply by addressing the relatively few pathways that invaders use to move into the country and into the state of California."

And people are getting involved, according to CISAC member Linda Arcularis, a member of the Inyo County Board of Supervisors. "People come in to our county offices all the time and they've picked something or they've gotten something out of their yard, or they've been out walking on a trail ... and bring it in to make sure if it's something that we should be concerned about."

She's working on getting her constituents to take bigger steps, too. "One of the interesting things that have developed in our small county over the last year or so is the whole master gardeners program," Arcularis says. "We have many people that have taken that course and now are very interested in planting their own gardens and growing their own crops and experimenting with a lot of crops that we haven't even seen in our county."

With the arrival of the California Invasive Species Advisory Committee, that kind of get-your-hands-dirty education and awareness will be on the increase in the years to come. California's agriculture, environment and habitat are counting on it.

Says CISAC Chair Doug Johnson: "Invasive species are a major environmental problem. In fact, I would say they are probably the biggest environmental problem that most Californians have never heard of." And, lucky for all of us Californians, that's exactly why he and his fellow CISAC members took this job.

Sustaining Agriculture through Innovation: Using Technology to Solve the Challenges of Our Time

California's farmers and ranchers are at the forefront of agricultural advancement and technology, focusing on innovative and environmentally safe growing methods and management practices. It's no wonder then that California's agricultural community is a leader in the global food chain, producing half of the nation's fruits and vegetables.

These past few years have been particularly challenging for those in agriculture. California is repeatedly inundated with invasive pests and diseases, such as the Asian citrus psyllid and European grapevine moth, which threaten to destroy

crops and challenge our ability to sustain the increasing demand for food in today's global economy. In response to these challenging times, California agriculture continues to achieve a competitive advantage by using best management practices aimed at reducing environmental damage and disease incidence, creating renewable energy sources, recycling agricultural waste products, and using biological methods for reducing pest populations... just to name a few.

Spurred by scientific and technological innovation, these best management practices

will allow California to remain at the forefront of sustainable farming. Growers and producers throughout the state are working hard to provide the best products for consumers. Here are just a few examples of the many ways in which the men and women in agriculture are harnessing innovation to solve the issues of our day.

Montna Farms—"Growing" Solar

With more than 100 years of farming experience in Sutter County, Montna Farms has a long history of commitment to sustainable agricultural practices. Owner Al Montna is continuing the practice of responsible stewardship, in part by developing a solar project to help minimize the farm's impact on the energy grid.

The system currently provides two-thirds of the 3,500-acre rice farm's energy needs. Not only does the solar project control the farm's energy costs, but it protects the environment by conserving energy during peak power use. "Here at Montna Farms, we are very conservation minded, and we do a lot of conservation enhancements on our properties," says Montna.

Montna Farms has been producing clean power to offset energy use for a little over a year now, with great success. They are so happy with the results that they are initiating a solar project at their rice milling operation in Colusa County. With incentives becoming more attractive and technology getting better by the minute, the ability to harness green energy is becoming a reality, rather than a dream.

By Josilyn Preskar

Drake Enterprises—It's All About the Soil

Growing more than 850 acres of avocados and 250 acres of grape vineyards in the Riverside and San Diego counties, Ben Drake, owner of Drake Enterprises, is known for his leadership and farming practices. With 30 years of farming experience, Drake has always been at the forefront when it comes to best management practices.

For example, Drake puts recyclables to good use, such as working with waste management companies and turning some of the bio-solids into compost for the vineyards. "By composting, I'm putting the carbon back into the soil where it belongs, thus improving the water holding capacity, nutrient level and soil structure." Using these composting measures not only cuts down on applying nitrogen phosphates in the vineyards, but also helps with soil retention and water moisture.

Another example of an innovative tool in the field is called Adcon. This tool provides updated information every 15 minutes on soil moisture in the vineyards, allowing Drake to know when to apply water and when to put stress on the vine to improve fruit quality. The Adcon uses telemetry, which sends a radio frequency from the field to a gateway, which then transmits to the Internet; this information can be accessed from any computer. This valuable tool can also be used for degree days, which help with insect modeling. Using this tool allows one to know exactly when certain pests should come out and when to treat for those insects.

These innovative farming operations are clear examples that wise investments in agriculture are producing results. A healthy agricultural sector is essential for providing the ever-growing demand for food worldwide. Growers and producers in this state will always

continue to find new ways to meet this demand using the best practices available, but it's also up to us as consumers to support our growers and encourage our leaders to continue investments in agriculture... for the health and prosperity of all.

AG VISION: Grassroots Efforts for a Thriving and Sustainable Agricultural Future

Over the last two years, the California State Board of Food and Agriculture has been working on the California Agricultural Vision (Ag Vision)—a process to create a strategic plan for the future of the state's agriculture and food system. This effort is being motivated by the rapidly growing list of challenges facing agriculture, from regulations and water supplies to urbanization and climate change.

What makes this process so encouraging for the future sustainability of agriculture in California is the diversity of individuals and organizations participating: farmers and ranchers, conservationists and environmentalists, local and organic advocates, as well as labor and food access representatives.

As this crucial process moves forward, several key questions have arisen. Can diverse groups work together to find solutions? Will Ag Vision result in deliverables? As the participants work collaboratively to answer these questions, California agriculture remains committed to the process.

"It is the dialogue that matters," said Luawanna Hallstrom, chair of the state board's Ag Vision committee. "Discussions are beginning between stakeholder groups that have never occurred before, building trust and understanding."

To help continue the momentum, the California State Board of Food and Agriculture is working with

American Farmland Trust to maintain a stakeholder working group, the Ag Vision advisory committee, which will begin the necessary groundwork for policy action. This advisory committee includes 17 stakeholders representing agriculture, environment, nutrition, local/organic and conservation groups. This committee will make recommendations to the state board in late 2010 regarding various aspects of agricultural policy.

"The Ag Vision process will not only recommend key policy changes needed to ensure a viable California agricultural economy into the future, but has also led to new partnerships that are already working together," said Ralph Grossi, Marindale Ranch and co-chair of the Ag Vision advisory committee.

One such partnership, highlighted by the increased demand on food banks throughout the Central Valley, allows California farmers to join with food banks to encourage increased donations of agricultural products. Sue Sigler, executive director of the California Association of Food Banks explains: "Awareness of various food donation options among farmers has been very low, by working with the state board and providing outreach to farmers we hope to double contributions over the next three years." Sigler is a member of the Ag Vision advisory committee and will serve as an advocate for policy options concerning food access.

By Joshua Eddy

Together these stakeholders, acting as one voice, can provide the grassroots effort needed to generate public policy and impact legislation, particularly as organizations across the nation prepare policy platforms for the 2012 federal farm bill.

Through a series of work sessions involving more than 90 leaders from agriculture and other stakeholder groups, seven diverse action priorities have been established:

- Ombudsman for improving regulatory administration
- Workforce and immigration reforms
- Water security for agriculture
- Agricultural lands and natural resources policy
- Better access to healthy foods
- Protection of agriculture and ecosystems from invasive species
- Promotion of agricultural stewardship as a feature of the California “brand”

“The Ag Vision is not a document that will sit on the shelf and gather dust,” said Al Montna, president of the California State Board of Food and Agriculture. “It is a process that will continue with the leadership of agriculture’s various stakeholder groups working together.”

The process that began with so many diverse stakeholder groups in April 2008, under the direction of President Al Montna and Secretary Kawamura, will continue to gain momentum and achieve the vision of “better health and well-being for Californians, a healthier state and world, and thriving communities.”

California AgVision is made possible in part by grants administered by the Columbia Foundation, Clarence E. Heller Charitable Foundation, the S.D. Bechtel, Jr. Foundation, California Agricultural Technology Institute and California State University Agricultural Research Initiative. Special thanks to American Farmland Trust for their continued work.

Agricultural Statistical Review

California agriculture experienced a 9 percent drop in the sales value of its products for 2009. The state's 81,500 farms and ranches received \$34.8 billion for their output last year, down from the all-time high of \$38.4 billion reached during 2008. The state's agricultural sales for 2009 were the third highest recorded, behind only 2008 and 2007.

California's decline in revenue was led by the dairy sector. Dairy producers received \$4.54 billion for their milk production in 2009, down 34 percent from 2008, and down 38 percent from the 2007 record high of \$7.34 billion. Herd size decreased 3 percent from 2008. Milk production from the state's dairy farms decreased 4 percent. Milk prices received by producers continued to fall from \$18.05 in 2007, to \$16.82 in 2008, to \$11.49 per hundred pounds of milk sold in 2009. California produced 20.9 percent of the nation's milk supply last year. Milk prices remained low for the first seven months before beginning to recover.

California remained the No. 1 state in cash farm receipts in 2009, with its \$34.8 billion in revenue representing 12.3 percent of the U.S. total. The state accounted for 16.5 percent of national receipts for crops, and 6.5 percent of the U.S. revenue for livestock and livestock products.

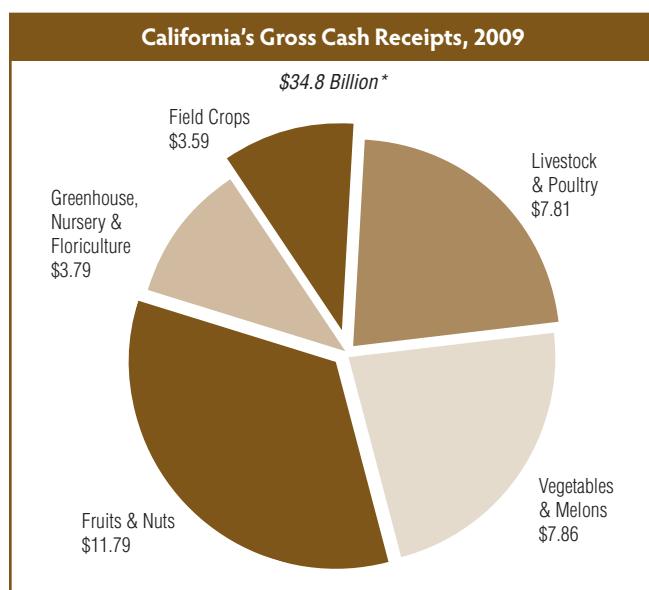

California's agricultural abundance includes more than 400 commodities. The state produces nearly half of U.S.-grown fruits, nuts and vegetables. Across the nation, U.S. consumers regularly purchase several crops produced solely in California.

Notable Increases in Value:

Kiwifruit	79%
Blueberries	46%
Safflower	44%
Plums and Dried Plums	36%
Walnuts	32%
Beans, Dry	26%
Nectarines	24%
Aquaculture	22%
Pecans	20%

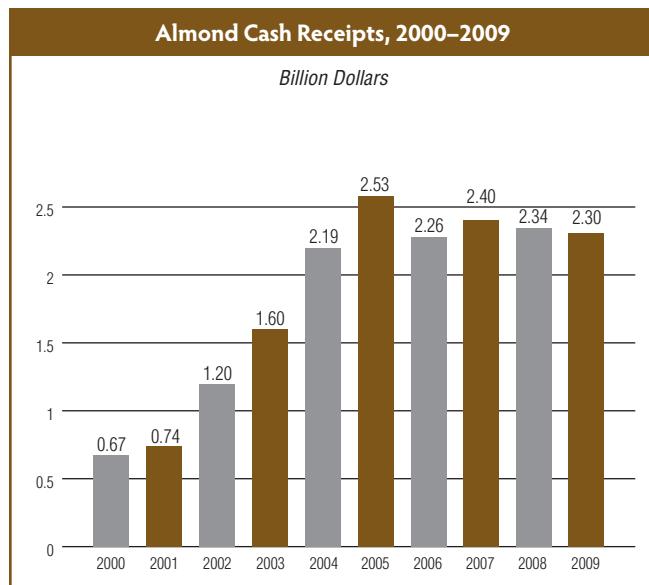

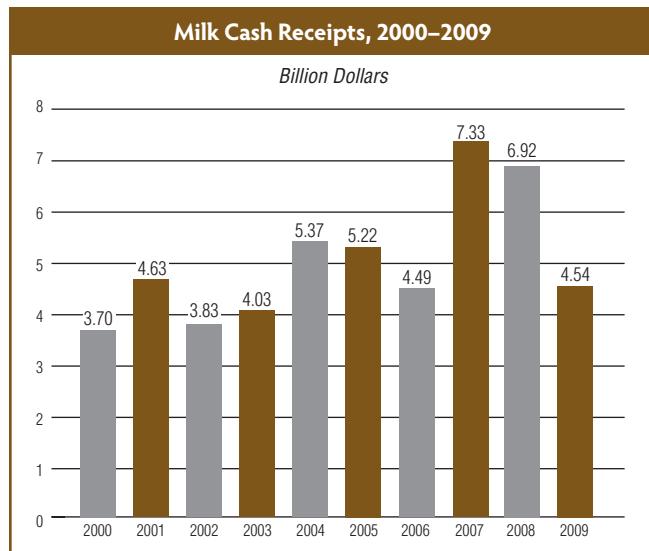

Notable Decreases in Value:

Cotton	52%
Hay	44%
Oats	38%
Misc. Fruits and Nuts	38%
Wool	37%
Honey	36%
Avocados	36%
Milk, Wholesale	34%
Other Berries	31%
Olives	31%
Wheat	29%

Farm Facts

In 2009, 81,500 farms operated in California, less than 4 percent of the national total. More than 23 percent of California farms produced commodity sales totaling \$100,000, compared with 17 percent for the U.S. as a whole. During 2009, California lands devoted to farming and ranching totaled 25.4 million acres, unchanged from 2008. Both the California and U.S. average farm size remained steady from the previous year at 312 and 418 acres, respectively.

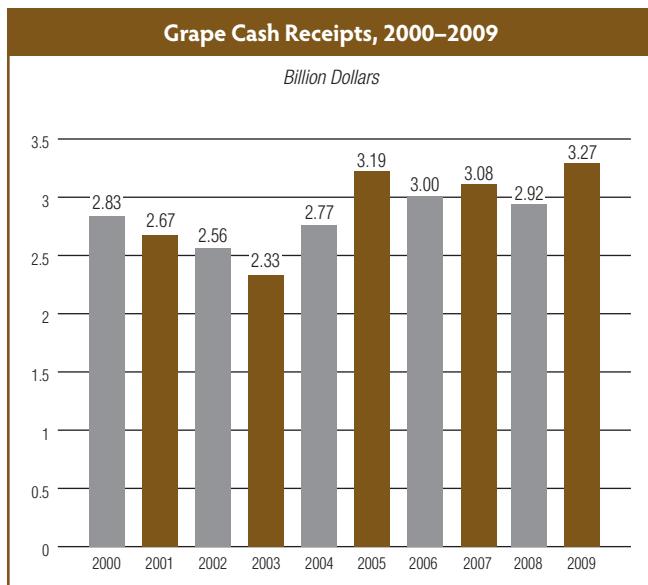

Land Values/Cash Rents

In 2009, the average value of farm real estate increased \$160 per acre to \$6,600 per acre. Farm real estate increased over the past year in California, whereas all types of farmland showed modest decreases across the United States. Irrigated cropland valued at \$11,600 per acre and non-irrigated cropland valued at \$3,400 per acre both decreased 6 percent and 5 percent in value from the previous year. All cropland was valued at \$9,480 per acre and decreased \$400 per acre from 2008. Pastureland was valued at \$2,900 per acre for 2009, down 4 percent from the previous year.

Because crop and pasture land values decreased from the previous year, so too did their respective rental rates. Irrigated cropland rental rates were valued at \$350 per acre, a decrease of \$10 per acre from the previous year. Similarly, non-irrigated land rental rates decreased 5 percent to \$56 per acre. All cropland was valued at \$274 per acre. Pastureland was valued at \$14 per acre, a decrease of 7 percent from the previous year.

Leading Counties

California is home to some of the most productive counties in the nation. According to the 2007 Census of Agriculture's ranking of market value of agricultural products sold, nine of the nation's top

10 producing counties are in California. The sales of these nine counties accounted for 6.6 percent of the nation's total sales value.

California's counties reported a decrease of 8.5 percent in the value of their agricultural production for 2009. Four counties reported agricultural production exceeding \$3 billion each and 13 counties reported a value of production in excess of \$1 billion. Fresno continued as the leading county with an agricultural production value of \$5.37 billion, a decrease of 4.7 percent from the 2008 value. Tulare County was second in value of production with \$4.05 billion,

Source: Summary of California County Agricultural Commissioners' Reports, 2008-2009.

a 19.4 percent decrease from 2008. Monterey had an increase of 5.4 percent in production to \$4.03 billion, moving the county to third in value. Kern's decrease of 10.6 percent dropped their value of agricultural production to \$3.61 billion, fourth in value.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$27.2 billion in value for 2009. Eight commodities exceeded \$1 billion in value for 2009. Eleven of the 20 commodities registered an increase in value from the previous year. The same was not true for California's leading commodity, milk and cream, which decreased by more than \$2 billion in value, due to lower production and lower prices. Final grower returns could change the sales value for hay, berries and other commodities, resulting in an updated dollar amount in next year's report.

Top 5 Agricultural States in Cash Receipts, 2009

California	1	34.8
Iowa	2	21.0
Texas	3	16.6
Nebraska	4	15.3
Illinois	5	14.5

Weather Highlights for 2009

January began with a cool and foggy weather over much of the interior. Earlier in the month some isolated shower activity occurred along the extreme northern coast and across the far northern counties while Southern California was basked in sunny and unseasonably warm weather. This was followed by a warm front passing through the north coast bringing about rain. The latter part of the month going into early February was dominated by unseasonably warm and dry conditions. Early plantings were progressing well from the recent wet weather while winter wheat and grains were growing well due to warm conditions. For the remainder of the month, the state experienced unsettled weather as a series of low pressure systems brought significant rainfall amounts and snow to northern parts of the state.

Even though temperatures across the state were very mild, rainfall continued in the northern two-thirds of the state throughout the first half of March while Southern California remained dry. The remnant of the month was characterized by fluctuations between low-pressure systems, which brought scattered showers and high-pressure systems with milder temperatures.

A series of high-pressure ridges brought clear skies and mild temperatures to California in the month

Crop and Livestock Commodities in which California Leads the Nation

Almonds	Escarole/Endive	Limes	Plums
Apricots	Figs	Melons, Cantaloupe	Plums, Dried
Artichokes	Flowers, Bulbs	Melons, Honeydew	Pluots
Asparagus	Flowers, Cut	Milk	Pomegranates
Avocados	Flowers, Potted Plants	Milk Goats	Raspberries
Beans, Dry Lima	Garlic	Nectarines	Rice, Sweet
Bedding/Garden Plants	Grapes, Table	Nursery, Bedding Plants	Safflower
Broccoli	Grapes, Wine	Nursery Crops	Seed, Alfalfa
Brussels Sprouts	Greens, Mustard	Olives	Seed, Bermuda Grass
Cabbage, Chinese	Hay, Alfalfa	Onions, Dry	Seed, Ladino Clover
Cabbage, F.M.	Herbs	Onions, Green	Seed, Vegetable and Flower
Carrots	Kale	Parsley	Spinach
Cauliflower	Kiwifruit	Peaches, Clingstone	Strawberries
Celery	Kumquats	Peaches, Freestone	Tangelos
Chicory	Lemons	Pears, Bartlett	Tangerines
Cotton, American Pima	Lettuce, Head	Peppers, Bell	Tomatoes, Processing
Daikon	Lettuce, Leaf	Persimmons	Vegetables, Greenhouse
Dates	Lettuce, Romaine	Pigeons and Squabs	Vegetables, Oriental
Eggplant		Pistachios	Walnuts
			Wild Rice

California is the sole producer (99 percent or more) of the commodities in **bold**.

of April and mostly throughout the month of May, resulting in above seasonal normal temperatures across the state throughout Memorial Day; however, amid these high pressures were moderate precipitation, gusty winds and cooler temperatures across the state. The heaviest rainfall was focused across the central portion of the state, from the coast to the Sierra Nevada Mountains. High winds throughout much of the Sacramento Valley hampered orchard spraying and bee pollination. A strong offshore flow developed over Southern California, resulting in ideal wildfire conditions along the Santa Barbara region.

June began with some excitements. First, a trough of low pressure slowly moving across the northern part of the state causing unusual cooling and, due to this, some locations in the valley broke previous rainfall records. A series of thunderstorms then aligned across the state to create an unusual event. Brief heavy rain, small-sized hail, and frequent dangerous lightning dominated the sky in the path of these thunderstorms. There were nearly 2,800 lightning strikes recorded on the very first week of the month just in the northern part of the state. Most of California stayed relatively cool during the month of June with temperatures in the valley and foothill locations 10 degrees below normal. By the end of the month, temperatures rose drastically through most of the state. Due to rain, wheat harvest slowed and some fruits were lost to splitting.

A typical weather was observed for the month of July. Strong high pressure settled over the Desert Southwest, resulting in a common summer-time pattern with very hot temperatures observed across most of California. Fire hazard remained high in some areas due to the extremely dry conditions.

The month of August began with strong high pressure over the entire southwestern portion of the United States, including California, bringing very hot weather to the Golden State. An upper level low pressure system then approached the Central California coast resulting in an increased onshore flow, which cooled off many coastal areas as well as the Sacramento-San Joaquin River Delta. This low also sparked a few showers across the mountains, especially across the Northern Sierra Nevada range. It even managed to spread a few sprinkles down to the Northern

Sacramento Valley. Although this pattern continued throughout the month, seasonal weather dominated. Some cotton fields received their last watering and were treated for aphid as more bolls opened.

Southern California remained under the influence of strong high pressure, which brought hotter than normal temperatures to that region at the start of September. The high pressure rebuilt over the entire state as the month progressed as unseasonably hot temperatures were observed towards the end of the month. Rangeland and dry-land pasture forage conditions, already critically dry, continued to deteriorate. Fire danger was high to extreme.

The month of October was dominated by low-pressure systems. Due to these systems, the state saw a significant amount of precipitation and strong winds. Three weeks into the month, rainfall records were noted across central and northern California. Total rainfall amounts varied from 2 to 6 inches in the valley, and 4 to 8 inches in the foothills and higher elevations. Along the coast, rainfall totals were estimated to be 3 to 8 inches. Minor flooding due to heavy rainfall was documented on highways, small streams and creeks. Sustained winds of 25 to 35 mph, with gusts to around 55 mph, were recorded in portions of the Sacramento and Central Valley and along the coast. Gusts over 65 mph were recorded in the higher elevations. Property damage, downed trees and branches were documented. Rainfall interrupted harvest and field preparation in many areas. The wind and rain caused lodging in some rice fields. Rain fell on some stacked alfalfa. Corn plants were pushed over by the wind and rain, but were still harvestable.

High-pressure systems were common over most of California during the month of November. Southern California remained dry except for some spotty coastal drizzle. Towards the end of the month, a cold front moved across the northern portion of the state, spreading rain showers across the valley and snow in the northern mountains.

December started with temperatures across the Sacramento and San Joaquin Valleys falling to record levels. Morning lows in the Northern Sacramento Valley fell to the teens. Snowfall across the Sierra Nevada Mountains was impressive, with more than 2 feet falling at the higher elevations. Southern Cali-

California's Top 20 Agricultural Exports, 2007-2009 ¹					
2009 Rank	Commodity	2007	2008	2009	Percent Change 2009/2008

¹ See page 126 for complete table and footnotes.

fornia enjoyed sunny and unseasonably warm weather as abundant sunshine warmed the Southland. Wheat, oats, and barley continue to be planted, although field work was slowed due to rain.

Global Marketplace

California continues to set the pace for the rest of the nation as the country's largest agricultural producer and exporter. In 2009, California's farmers and ranchers exported more than 22 percent of the state's agricultural production for that year. In dollar terms, California's agricultural export statistics reveal that total exports were valued at \$12.4 billion for 2009.

Significantly, California is the only state in the nation to export the following commodities: 100 percent of the almonds, artichokes, dates, dried plums, figs, garlic, kiwifruit, olives, pistachios, raisins and walnuts.

A few of California's agricultural exports experienced dramatic growth in 2009—exports of rice jumped by 59 percent to \$877 million, making that commodity second to almonds as a top export crop. Walnuts, pistachios, fresh tomatoes and spinach also enjoyed export gains over the prior year.

California's Top 10 Agricultural Export Markets, 2009

Rank	Country	Export Value Millions	Leading Exports
1	Canada	2,557	Lettuce, Strawberries, Wine
2	European Union-27	1,988	Almonds, Wine, Pistachios
3	Japan	1,119	Rice, Almonds, Wine
4	China/Hong Kong	985	Almonds, Pistachios, Walnuts
5	Mexico	551	Dairy and Products, Processed Tomatoes, Walnuts
6	South Korea	347	Oranges, Almonds, Walnuts
7	India	214	Almonds, Cotton, Pistachios
8	United Arab Emirates	213	Almonds, Walnuts, Hay
9	Australia	202	Table Grapes, Rice, Walnuts
10	Taiwan	191	Rice, Table Grapes, Peaches and Nectarines

The top three export destinations for California's agricultural bounty are Canada, the European Union and Japan. These destinations are major agricultural trading partners, representing 46 percent of total value at \$5.7 billion in 2009.

Over the past seven years, California's agricultural exports have realized tremendous growth. Using 2003 as the base year, the state's exports have increased by 66 percent. Clearly, it is the taste and unparalleled quality of California's food and agricultural products that drive this demand worldwide.

Cash Income by Commodity Groups, 2007–2009¹

NET FARM INCOME	9,852,558	7,736,108	11,714,874	9,766,757	8,782,066

¹ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

¹ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

² Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

³ Based on total value.

⁴ Based on values published in the county agricultural commissioners' annual crop reports.

⁵ Share of U.S. production based on 2007 Census of Agriculture.

⁶ Includes sunflower, safflower, and canola.

⁷ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

⁸ Includes cut flowers, potted plants, foliage plants, bedding plants and indoor decoratives.

County Statistical Data

California's counties reported a decrease of 8.5 percent in the value of their agricultural production for 2009. Four counties reported agricultural production exceeding \$3 billion each and 13 counties reported a value of production in excess of \$1 billion. Fresno continued as the leading county with an agricultural production value of \$5.37 billion, a decrease of 4.7 percent from the 2008 value. Tulare County was second in value of production with \$4.05 billion, a 19.4 percent decrease from 2008. Monterey had an increase of 5.4 percent in production to \$4.03 billion, moving the county to third in value. Kern's decrease of 10.6 percent dropped their value of agricultural production to \$3.61 billion, fourth in value.

Notes to the Agricultural Commissioners' Data

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm where it was produced. Values placed on pasture and range feed are included and fresh fruit and vegetable crop values are based on the free-on-board (F.O.B.) packed price.

Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The county agricultural commissioners' reports also provide statistics on a broader range of commodities than estimates prepared by other agencies.

Because of these concepts, the state total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service, California Field Office. The larger total value reported by the agricultural commissioners results from the different definitions used in estimating total value of production rather than cash receipts to producers.

Some counties include timber as a part of their crop report, following the pattern set by the County Agricultural Commissioners' Association. Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. The total value reported by the counties, including timber, is 0.2 percent more than the \$41.4 billion recorded in the *County Rank by Gross Value of Agricultural Production, 2008-2009* table on page 34. The table on page 34 also lists the totals with timber.

Highlights of County Ranks and State Totals, 2009

Rank	Commodity	County Rankings
1	Milk and Cream	Tulare leads with more than 27 percent of the state total.
2	Grapes, All	Fresno leads, followed closely by Kern and Napa.
3	Nursery Products	San Diego continues to lead with more than 24 percent of the total.
4	Almonds	Fresno leads with more than 20 percent, followed by Stanislaus.
5	Lettuce	Monterey leads with more than 63 percent of the state total.
6	Strawberries	Monterey and Ventura lead with more than 65 percent of the total.
7	Cattle and Calves	Tulare is No. 1, followed by Fresno and Imperial counties.
8	Tomatoes, Processing	Fresno leads with nearly 40 percent, followed by Yolo and San Joaquin.
9	Flowers and Foliage	San Diego leads with over half of the state total.
10	Rice (Excl. Seed)	Colusa leads with more than 25 percent of the total, followed by Sutter and Butte.
11	Alfalfa Hay	Kern leads with 12 percent, followed closely by Tulare County.
12	Walnuts	San Joaquin leads with nearly 20 percent, followed by Butte.
13	Broccoli	Monterey and Santa Barbara lead with more than 65 percent of the total.
14	Chickens	Fresno leads with nearly 42 percent, followed by Merced and Stanislaus.
15	Oranges	Tulare leads with over half of the state total.

California Timber Industry

California has more forest land than any state, except Alaska. California's abundant forests could provide nearly 100 percent of the state's demand for wood.

County Agricultural Commissioners' Reports

Copies of individual county agricultural commissioners' reports may be requested or obtained directly from each county agricultural commissioner's office. Many of the counties publish the reports on their Web sites.

USDA's National Agricultural Statistics Service, California Field Office publications are available free-of-charge on the Internet at www.nass.usda.gov/ca.

California's Leading Timber Counties, 2009¹

Timber Rank	County	Timber Volume Million Bd. Ft.	Total Agricultural Value (Including Timber) \$1,000	Timber Value \$1,000	Timber Percentage of Total Agricultural Value Percent
1	Humboldt	110,197	16,1875	27,495	17.0 ²
2	Mendocino	43,801	130,466	12,316	9.4
3	Siskiyou	118,512	212,239	11,648	5.5
4	Shasta	100,061	100,545	7,032	7.0
5	Tehama	55,137	185,977	5,367	2.9

¹ Timber volume and value data are from the State Board of Equalization, Timber Tax Division.

² Data not received for 2009 for this report. Value obtained from previous year's report.

County ²	County Rank by Gross Value of Agricultural Production, 2008–2009 ¹

¹ Totals vary slightly from totals published by counties due to classification differences between county and state reports.² Three county agricultural commissioners' reports were not available at publication, so 2003 data (last available report) was used for Trinity County, while 2008 data was used for Humboldt and Modoc counties for this report.

9	Kiwifruit	3,713
10	Pasture, Range	2,660

¹ The data rankings were extracted from county agricultural commissioners' reports, where published. Those not ranked by the counties were ranked by USDA's National Agricultural Statistics Service, California Field Office. Timber was omitted in rankings. Three county agricultural commissioners' reports were not available at publication. The last years available were used for this report: Trinity County (2003), Humboldt and Modoc counties (2008).

¹ Three county agricultural commissioners' reports were not available at publication. The 2003 data (last available report) was used for Trinity County, while 2008 data was used for Humboldt and Modoc counties for this report.

² Includes trees, shrubs, vines, bedding plants, bulbs and turf not included in flowers and foliage.

³ Includes cut flowers, potted plants, foliage plants and indoor decoratives.

Field Crops

The total value of California field crop production declined to \$3.54 billion, down 29 percent from a record high in 2008, and down 14 percent from 2007. California's acreage and production both decreased. The harvested acreage declined by 13 percent while production was down by 17 percent from 2008.

California continued to lead the nation in alfalfa hay production, despite dry growing conditions and lower prices. In 2009, California produced approximately 6.96 million tons of alfalfa hay, generating \$758 million. Other hay also showed a decline in production and price also; values were down 48 percent to \$169 million. In total, all hay declined in value by 48 percent for a total of \$927 million.

Price of Upland cotton was \$0.72 per pound, up 20 percent from 2008; however, tight water supplies and crop conversion lowered planted acreage for the fifth year in a row to 71,000 acres, which was a 41 percent drop from 2008, and 87 percent below 2004. The total value of Upland cotton also decreased from \$105 million in 2008 to \$86 million in 2009, a drop of 18 percent. California growers planted 119,000 acres of American Pima cotton, down 36,000 from 2008. The American Pima cotton price increased to \$1.14 per pound. The rise in price kept total value unchanged for American Pima Cotton from 2008 to 2009, which generated \$192 million for each year.

Rice plantings grew by 8 percent in California, with 561,000 acres planted in 2009. Medium grain rice contributed to 90 percent of the total rice acreage and 91 percent of the total production. Despite an increase in acreage, the total value of rice production declined by 25 percent from the previous year. The 2009 total value for all rice was \$889 million.

California corn for grain production was valued at \$125 million for 2009, which was a 21 percent drop from 2008. The harvested acreage and yield both declined from the previous year. Harvested acreage was down 6 percent to 160,000 acres, while yield was down 8 percent to 5.04 tons per acre.

Fifty-four percent of the California winter wheat crop was harvested for grain. Many growers of wheat and other small grains chose to harvest the crop for hay or silage due to drought conditions. Wheat was planted on 795,000 acres and 500,000 were harvested for grain. Overall, production decreased 12 percent and value dropped 32 percent. While winter wheat production declined by 22 percent, durum wheat production increased by 12 percent. Prices were lower for both winter wheat and durum wheat, priced at \$175.00 per ton and \$200.00 per ton, respectively.

Notable Increases in Value:

Beans, Dry Edible	34%
Oats.....	28%
Potatoes, Spring.....	28%
Potatoes, Sweet	19%

Notable Decreases in Value:

Safflower	61%
Barley, All.....	50%
Hay, Alfalfa.....	48%
Hay, All.....	48%
Hay, Other	48%
Potatoes, Summer.....	48%

¹ Area planted includes preceding fall.² Production is on a clean basis.³ Missing data have not been published due to the estimate being discontinued, not estimated, or not available.⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.⁵ Planted acreage is for all purposes.⁶ Production ginned. Cotton bales are 480 lbs. net-weight.⁷ Estimates began in 2005.⁸ All alfalfa forage production is the sum of alfalfa harvested as dry hay and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.⁹ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop, after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.¹⁰ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.¹¹ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.¹² Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.¹³ Sweet rice acreage has been included since the 2003 crop year, but not previous years.¹⁴ Excludes wild rice.¹⁵ Estimates began in 2000.¹⁶ Relates to year of intended harvest for fall planted beets in Central California and to year of planting for overwintered beets in central and Southern California.¹⁷ Preliminary marketing year average price.

¹ Counties or district data combined to avoid disclosing data for individual farms. "All Wheat" total production for 2009 is the sum of Durum Wheat and Winter Wheat, which add to 1,266,000 tons.

Floriculture

California's 2009 floriculture crop leads the nation at a value of \$922 million wholesale, for operations with \$100,000 or more in sales, but is down 12 percent from the revised 2008 total. California accounts for 25 percent of the total wholesale value of reported crop for the United States. Florida, the next largest producer, was down 9 percent from the prior year, with \$674 million in wholesale value for 2009. The number of producers in California declined from a revised 492 in 2008 to 436 in 2009. In Florida, the number of producers decreased from a revised 528 in 2008 to 475 in 2009. California and Florida together accounted for 43 percent of the 15-state total value of floriculture crops.

California-grown annual bedding and garden plants accounts for almost 16 percent of the total value recorded for this grouping to lead the highest valued crop category in the 15-state program. Wholesale value of California-grown bedding and garden plants, produced by all operations with \$100,000 or more in sales, decreased approximately 3 percent from a revised \$217 million in 2008 to approximately \$210 million in 2009. Wholesale value of Michigan crops, the second largest, decreased almost 4 percent to \$180 million. The total wholesale of annual bedding and garden plant crops in the 15-state program slightly increased to \$1.32 billion. The number of annual bedding and garden plant producers in the 15-state program increased more than 1 percent, from 1,779 in 2008 to 1,806, in 2009.

California is the dominant state in cut flower production, accounting for 75 percent of the total cut flower wholesale value among operations surveyed with \$100,000 or more in total sales. The \$269 million in value for 2009 was down 17 percent from the revised 2008 valuation of \$324 million. Total cut flower wholesale value increased nearly 13 percent for the second-largest, Washington state, from a revised \$23.1 million in 2008 to \$26.1 million in 2009. The

total wholesale value of cut flower crops in the 15-state program decreased nearly 14 percent, from a revised \$417 million in 2008 to \$359 million, in 2009. The number of cut flower producers in the 15-state program declined slightly, from 364 in 2008 to 362 in 2009.

California also leads the country in potted flowering plant value for 2009 with a total of \$206 million wholesale produced by operations with \$100,000 or more in total sales, down more than 15 percent from the revised 2008 valuation. California accounted for approximately 33 percent of the 15-state total wholesale value reported. Florida, the second-largest producer, accounted for 21 percent of the 15-state total with \$131 million wholesale. Potted orchid production continued to lead this category in California with crops valued at \$74.9 million, up 16 percent from the revised 2008 wholesale value. Production of potted orchids, potted poinsettias and florist roses together accounted for more than 58 percent of the wholesale value of California-grown potted flower plants. The total wholesale value of potted flowering plant crops in the 15-state program decreased over 5 percent from the revised 2008 valuation to \$632 million. The number of potted flowering plant producers in the 15-state program increased slightly from a revised 1,251 in 2008 to 1,259 in 2009.

Fruit and Nut Crops

California accounts for 46 percent of the U.S. fruit and nut production and 62 percent of the national value of fruit and nut crops. In 2009, the state produced 14.2 million tons of fruit and nuts, 5 percent less than 2008. Grape production totaled 6.54 million tons for 2009, a slight decrease from the 2008 grape crop. The state's total production value of all fruits and nuts in 2009 was \$11.8 billion, up 6 percent from 2008.

Grapes continue to be the top-valued fruit and nut crop at \$3.27 billion, up 12 percent from the previous year. The California grape crop accounts for 90 percent of the 2009 United States utilized grape production. Crops with record production in 2009 were blueberries, raspberries, strawberries, pistachios and walnuts. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins and walnuts.

Notable Increases in Production:

Blueberries	73%
Lemons	42%
Plums, Dried.....	29%
Pistachios	28%
Grapes, Wine	23%

Notable Decreases in Production:

Avocados.....	47%
Olives	31%
Plums	30%
Nectarines.....	29%
Oranges, Valencia	29%

According to the USDA's Economic Research Service, in 2009 California was the No. 1 exporter of agricultural commodities in the United States. Tree nuts were the No. 1 agricultural export for California, followed by fruit.

The United States is among the top producers and consumers of fruit and tree nuts in the world. Each year, fruit and tree nut production generates about 13 percent of the United States farm cash receipts for all agricultural crops. Over one-tenth of United States fruit and tree nut production is destined for the export market, while imports make-up over one-third of domestic fruit and tree nut consumption. The typical American consumes around 280 pounds of fruit and tree nuts (fresh and processed products) each year. Oranges, apples, grapes and bananas are the most popular fruit while almonds, pecans and walnuts are the most preferred tree nuts.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage, Florida more than 10 percent, and Washington around 6 percent.

U.S. tree nut production since the mid-2000s generated, on average, nearly \$4 billion in annual farm cash receipts, with almonds, walnuts, pistachios and pecans accounting for most of the sales. Almost 90 percent of the U.S. tree nut production is harvested from Golden State orchards annually.

¹ Non-bearing shown only in year when acreage surveys were conducted.² Return at processing plant door or packinghouse door.³ Acres of raisin-type grapes enrolled in the California Raisin Industry Diversion (RID) program were: 1998–2000—zero; 2001—41,000; 2002—27,000; 2003–2007—zero. These acres were deducted from bearing acres before calculating yield.⁴ Production is the fresh equivalent of dried and not dried.⁵ Acreage by county, variety and year of planting for 2007 are available upon request.⁶ These crops are apricot-plum crosses (*aprium*, *plumcot*, *pluots*), black walnuts, chayotes, cherimoyas, chestnuts, *feijoas*, guavas, *jojobas*, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products and orchard biomass.

¹ Excludes raisins produced from table-type grapes.² Miscellaneous seedless grapes with Oleate applied.³ Data for 2009 is preliminary.

Grape Crush

Grape Crush Report Overview

The Final Grape Crush Report includes all grape tonnage crushed during the 2009 season. Changes in tonnage, Brix and prices from the preliminary report were due to late reports and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the administrative code.

Summary of Grape Tonnages and Prices

The 2009 crush totaled 4,095,297 tons, up 11 percent from the 2008 crush of 3,673,858 tons. This is only the second time that California's crush has exceeded 4 million tons. Red wine varieties accounted for the largest share of all grapes crushed, at 2,078,121 tons, up 24 percent from 2008. The 2009 white wine variety crush totaled 1,624,910 tons, up 21 percent from 2008. Tons crushed of raisin-type varieties totaled 307,360, down 38 percent from 2008, and tons crushed of table-type varieties totaled 84,906, down 49 percent from 2008.

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2009 season, this total was 499,323 tons, approximately 12 percent of the 2009 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type or variety.

The 2009 average price of all varieties was \$574.46, up 5 percent from 2008. Average prices for the 2009 crop by type were as follows: red wine grapes, \$670.54, up 1 percent from 2008; white wine grapes, \$535.55, down 1 percent from 2008; raisin grapes, \$171.02, down 24 percent; and table grapes, \$143.10, down 21 percent. These price levels have not been adjusted for inflation. The large increase in higher priced wine grapes crushed, coupled with the decline in less expensive raisin and table grape varieties crushed, results in the average price increase from 2008.

BACTERIAL BLIGHT OF GRAPE

Xylophilus ampelinus

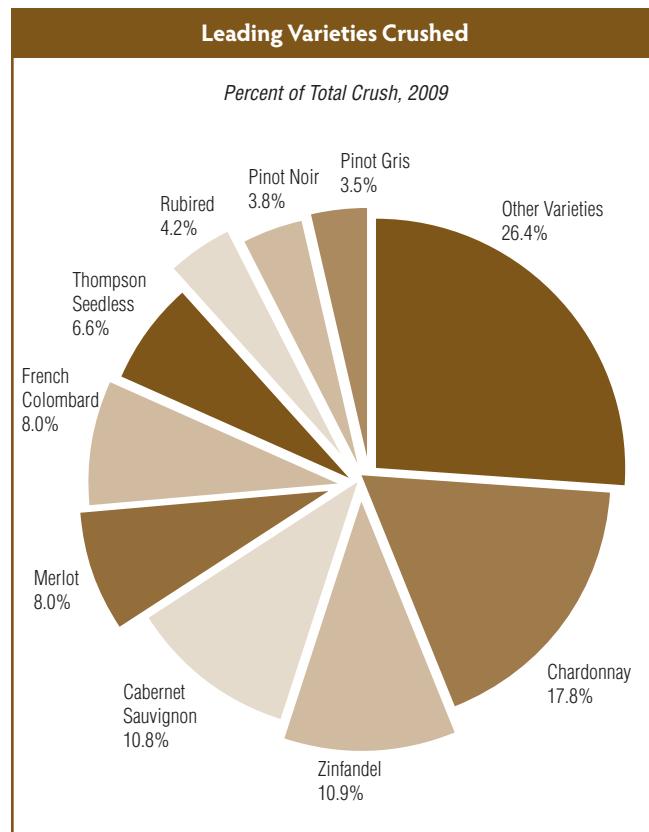

Readily transmitted by pruning tools and cuttings, this pathogen can lead to serious harvest losses.

Leading Grape Varieties and Districts

In 2009, Chardonnay accounted for the largest percentage of the total crush volume with 17.8 percent. Zinfandel accounted for the second leading percentage of crush with 10.9 percent of the total crush. The next eight highest percentages of grapes crushed were all wine varieties.

District 13, (Madera, Fresno, Alpine, Mono, Inyo counties; and Kings and Tulare counties north of Nevada Avenue (Avenue 192)), had the largest share of the state's crush, at 1,344,514 tons. The average price per ton in district 13 was \$247.86.

Grapes produced in District 4 (Napa County) received the highest average price of \$3,414.58 per ton, down less than 1 percent from 2008. District 3 (Sonoma and Marin counties) received the second highest return of \$2,186.61, down 2 percent from 2008. The 2008 Chardonnay price of \$757.82 was down 7 percent from 2008, and the Cabernet Sauvignon price of \$1,078.09 was down 3 percent from 2008. The 2009 average price for Zinfandel was \$464.00, up less than 1 percent from 2008, while the Merlot average price was down 4 percent from 2008 at \$625.64 per ton.

Grenache	— Grenache Noir	Princess	— Melissa						
		Red Globe	— Rose Ito						
		Refosco	— Mondeuse						

Livestock and Dairy

California's total livestock and livestock products cash receipts were \$7.8 billion in 2009, down 26 percent from 2008. Nearly 85 percent of the change from 2008 was due to the decline in dairy products. California dropped behind Iowa to rank third nationally, accounting for 6.5 percent of total livestock cash receipts. Dairy products remain the state's leading commodity, despite cash receipts declining for milk by more than 34 percent from 2008. Receipts for cattle and calves dropped from the state's fifth leading commodity in 2008 to its seventh.

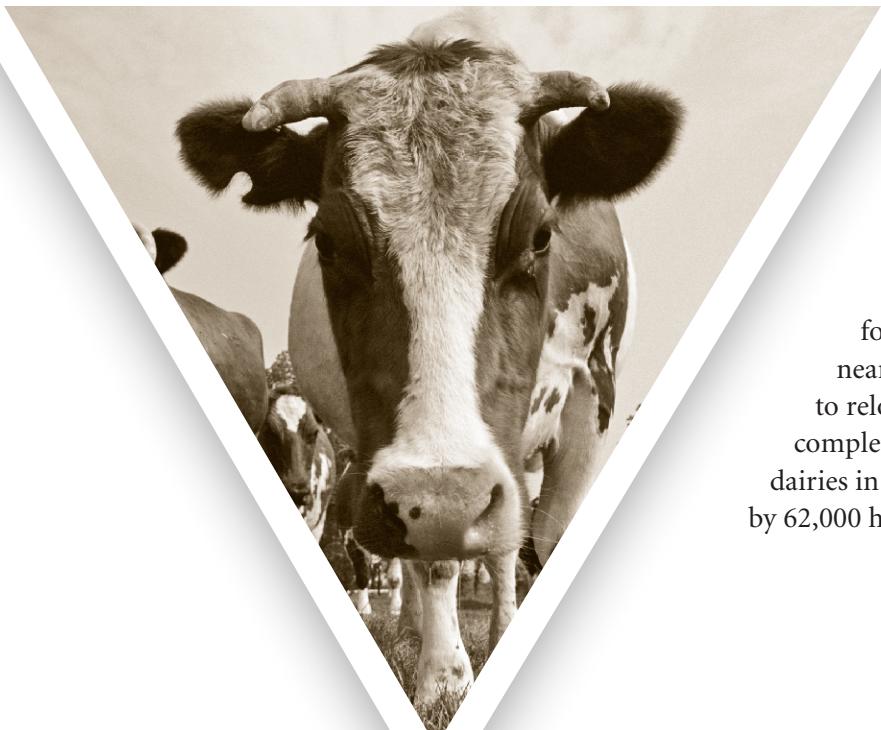

The Golden State's dairy industry faced a very difficult year with historic low prices, high costs of production and economic conditions making credit availability very tight. Milk production had a net

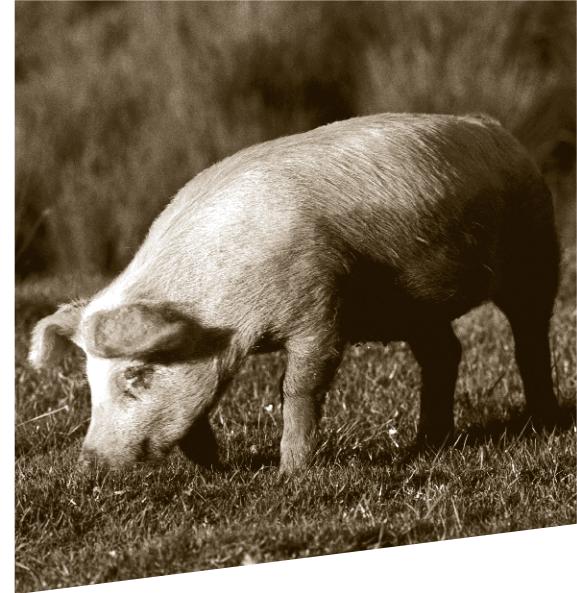

decrease every month in 2009 compared with the same month in 2008. The annual production was 4.1 percent below the prior year—the largest average annual loss in production ever recorded in the state. The last year a negative growth in milk production was recorded over the prior year was in 1979. Reduction in production began in 2008 in response to inadequate plant capacity and some cooperatives and other processors initiating production base caps. These caps continued into 2009; coupled with the Cooperatives Working Together's herd retirements and the decline in dairy numbers, they drove the decline in production. Additional factors contributing to the slackening production included the movement to less protein-rich feed rations in response to high feed costs

and some operations limiting herd size to comply with air and water regulations.

Prices received by dairy producers had dropped to below cost of production in late 2008 and this disparity continued through the third quarter of 2009.

Production costs dropped on average by 8 percent from 2008, but the average prices paid to producers for Grade A milk in 2009 decreased nearly 32 percent. Dairies continued to relocate to other states or shut down completely with a net loss of 100 California dairies in 2009. The state's dairy herd declined by 62,000 head in 2009.

California has been the nation's leading dairy state since 1993, when it surpassed Wisconsin in milk production. Sales of milk and cream contributed \$4.54 billion in 2009. Wisconsin, New York, Idaho, and Pennsylvania were the next leading states in total milk production. California ranked No.1 in the U.S. in the production of fluid milk, butter, ice cream, and nonfat dry milk. California was second in total cheese production.

California's dairies produced 39.5 billion pounds of milk, accounting for 21 percent of the nation's milk supply. For the third year in a row, all 12 months of 2009 recorded more than 3.1 billion pounds in milk production. Approximately 40 percent of all the Golden State's milk was used to make cheese, down 2 percent from 2008.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-producing counties in California, accounting for 71 percent of the state's total milk production, were Tulare (27 percent), Merced (14 percent), Kings (10 percent), Stanislaus (10 percent) and Kern (9 percent). Sales of fluid milk in California averaged 31 percent whole milk, 36 percent reduced fat milk, 15 percent low fat milk, and 15 percent skim milk.

Milk production per cow decreased 1.5 percent to 22,000 pounds. California's total cheese produc-

tion of 2.06 billion pounds was down nearly 3 percent compared to 2008. From 2008 to 2009, United States cheese exports declined 17 percent to 108,000 metric tons, according to the USDA Foreign Agricultural Service. Butter exports also decreased by 68 percent. Softening demand, fallout from the worldwide recession and credit crisis, and aggressive Oceania pricing, bumped U.S. suppliers out of the world market when prices fell below U.S. support levels. Dairy product export sales were down 40 percent from the record level set in 2008, but most of the downturn reflected lower world prices as overall U.S. dairy product export volume was up 10 percent.

Cash receipts for cattle and calves decreased 11 percent from 2008. Sales totaled \$1.68 billion, compared with \$1.88 billion in 2008. Receipts for hogs and pigs were 25 percent off the previous year. Sheep and lambs increased 19 percent from 2008, recovering from a three-year downward trend in cash receipts. Aquaculture receipts were up 22 percent from 2008.

California's 2009 honey production, at 11.7 million pounds, was 36 percent below 2008 and 14 percent below 2007. Producing colonies totaled 355 thousand, down 1 percent from the previous year. The yield per colony averaged 33 pounds, compared to 51 pounds produced in 2008. The average price received by producers in 2009 was \$1.39 per pound of honey, which is unchanged from the 2008 level.

Bee Colonies, Honey Production and Value, 2000–2009¹

Year	Bee Colonies		Production 1,000 Pounds	Average Price Per Unit ² ¢/Lb.	Value \$1,000

GIANT REED
Arundo donax

Thick stems grow up to 20 feet, blocking waterways and consuming precious water resources; casts dense shade that can displace native plants.

¹ An operation is any place having one or more head of cattle on hand at any time during the year. Percent of inventory reflect average distributions of various probability surveys conducted during the year, but are based primarily on beginning-of-year and mid-year surveys.

² After 2007, data will only be published from the Census of Agriculture, which is conducted in five-year intervals.

¹ An operation is any place having one or more head of cattle on hand at any time during the year. Percent of inventory reflect average distributions of various probability surveys conducted during the year, but are based primarily on beginning-of-year and mid-year surveys.

² After 2007, data will only be published from the Census of Agriculture, which is conducted in five-year intervals.

¹ An operation is any place having one or more head of milk cows, excluding cows used to nurse calves, on hand at any time during the year. Percent of inventory reflect average distributions of various surveys conducted during the year.

² Data will only be published during the Census of Agriculture, which is conducted in five-year intervals.

Grazing Fee Annual Average Rates, 2000–2009 ¹			
Year	Per Animal Unit ²	Cow-Calf	Per Head
		Dollars Per Month

Vegetable and Melon Crops

California continued as the leading fresh market vegetable producing state in 2009, accounting for 44 percent of the U.S. harvested area, 49 percent of the national production, and 52 percent of the value, for the 24 selected vegetables and melons estimated.

Fresh market production increased for snap beans, sweet corn, head and Romaine lettuce, cantaloupe, honeydew, watermelon, mushrooms, summer storage onions, chili peppers, spinach and squash. Fresh vegetable crops with decreased production included artichokes, broccoli, carrots, cucumbers, leaf lettuce, bell peppers and tomatoes.

California also led the nation in processing vegetable production during 2009, with 27 percent of the U.S. harvested acreage, 69 percent of the national production and 57 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2009 fresh and processing vegetable and melon production was \$7.78 billion, down from 2008's revised total of \$8.08 billion. Lettuce remained the leading vegetable crop in value of production, at \$1.73 billion, followed by tomatoes with \$1.29 billion.

Vegetable crops that had value increases were artichokes; snap beans; broccoli; processing carrots; cauliflower; sweet corn; garlic; head, leaf and Romaine lettuce; honeydew melons; agaricus mushrooms; summer storage onions; chili peppers; pumpkins; processing tomatoes and fresh spinach. Crops that had decreased value included asparagus, cabbage, fresh carrots, celery, cucumbers, cantaloupe, watermelon, spring and summer non-storage onions, bell peppers, processing spinach, squash and fresh market tomatoes.

California's cash receipts for vegetables ranked No. 1 in the nation and accounted for 48.3 percent of the U.S. total. Valued at \$7.85 billion, vegetables represented 22.5 percent of the state's total cash income from agriculture in 2009.

According to the USDA Economic Research Service, per capita use of vegetables, melons, potatoes,

sweet potatoes, pulse crops and mushrooms in the United States decreased 0.4 percent from 447 pounds in 2008 to 445 pounds in 2009.

Fresh market consumption per capita in 2009 was 168 pounds, 1 percent lower than in 2008. Utilization increased for asparagus, broccoli, cucumbers, eggplant, lettuce, spinach, squash, tomatoes and cantaloupe. Declining utilization was observed for snap beans, cabbage, carrots, cauliflower, celery, sweet corn, garlic, onions, bell peppers, pumpkins, watermelon and honeydew.

Per capita consumption of U.S. processing vegetables increased 5 percent from 115 pounds in 2008 to 121 pounds in 2009. Processing vegetables whose utilization increased in 2009 included snap beans, sweet corn, cucumbers, tomatoes, chili peppers and dehydrator onions. Consumption decreased for processing spinach.

Notable Increases in Production:

Romaine Lettuce.....	16%
Fresh Market Snap Beans	14%
Fresh Market Sweet Corn.....	13%
Processing Tomatoes	13%
Chili Peppers.....	12%

Notable Decreases in Production:

Summer Non-Storage Onions	16%
Spring Onions	14%
Fresh Market Cucumbers.....	14%
Leaf Lettuce	10%
Fresh Market Tomatoes.....	10%

	2009	—	187,000	—	81,280,000	—	1,112,774

¹ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.² Includes both fresh marketing and processing vegetables.³ Estimates discontinued in 2002.⁴ Estimates began in 2000 and discontinued in 2002.⁵ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 2000–2009—250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.⁶ Estimates began in 2000.⁷ Included in summer storage onions.⁸ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.⁹ Estimates began in 2002.¹⁰ Miscellaneous vegetables and melons include: green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.

California Agricultural Exports

In 2009, California agricultural exports reached \$12.4 billion, representing a 66 percent increase over the past seven years. As indicated by the table below, California's agricultural export growth is continuing despite the recent global economic downturn.

California Agricultural Export Values, 2003-2009

Millions

2003.....	\$7.49
2004.....	\$8.24
2005.....	\$9.37
2006.....	\$9.82
2007.....	\$11.17
2008.....	\$13.10
2009.....	\$12.42

Exports of almonds continued to be the top commodity from California, with \$1.9 billion in foreign sales. However, rice exports realized a dramatic 59 percent increase over the year before, making them No. 2 in the overall ranking for 2009.

The California Department of Food and Agriculture works closely with the Western United States Agricultural Trade Association and the Centers for International Trade Development to increase California's agricultural exports and provide trade services to the state's farmers, ranchers and food processors.

Methodology

Data to compute agricultural exports are derived from official government sources, published industry sources and unpublished information from government and industry. Export quantities and values of U.S. and California port districts are from the Department of Commerce (DOC) trade data posted on the U.S. International Trade Commission (USITC) online database at <http://dataweb.usitc.gov>. Canadian import (value) data are from Strategis; Canada's online database at <http://strategis.ic.gc.ca/engdoc/main.html>. If the California export price was not available for a particular product, we used the U.S. average export price for that commodity in order to provide a dollar value for exports. Production quantities and values are from various National Agricultural Statistics Service (NASS), Economic Research Service (ERS), and Agricultural Marketing Service (AMS) publications.

The University of California Agricultural Issues Center (AIC) export estimates differ from other sources, such as ERS, on methodological issues. The ERS estimates are based on a state's share of production of the exported commodity. It is assumed that, for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use port data, without direct links to where the product originated. The AIC export figures correspond to commodities that have been produced within the state. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, the final AIC report presents the export data at the individual commodity level. For instance, exports of a given fruit in fresh, canned and dried forms are added up and listed under the name of the fruit, although the estimation of fresh fruit exports may differ from the methodology used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm-weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

To improve the accuracy of the 2009 export data, the AIC examined if previous assumptions accurately reflected current market situations for each of the top 55 commodities listed. As a result, the estimation methods for many of the commodities were updated and improved. We used the new estimation methods to revise the 2007 and 2008 export data. Further revisions to 2007 and 2008 estimates reflect updated figures related to production data.

The 2009 California export data include a 56th commodity: blueberries. The 2009 estimate of California dairy exports was calculated using California's share of total U.S. dairy production by product and then applying this share to the U.S. export of each product. Previous estimates were calculated using survey data from the California dairy industry, which was unavailable for this report.

¹ 2007 and 2008 values were revised based on updated estimation methodology.² 2007 and/or 2008 figures were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.³ Values for blueberry exports have been added as the 56th commodity.⁴ Total principal commodity export values for 2007 and 2008 have been revised to reflect changes in estimation techniques for various commodities and the addition of blueberry exports.⁵ "Other Products" is composed of (a) highly processed products that are difficult to attribute to a specific commodity, such as mixtures of fruits, nuts and vegetables and other processed foods; and (b) animal and plant products marketed in such small quantities that they are not included in the top 56 leading commodities.

Note: Export values for each year are rounded. More precise numbers are used in the percent change calculations.

¹ 2008 figures were revised based on updated export and production data and changes in estimation methodology.² Hides and skins are included in the heading "Beef and Products" from previous reports, but not explicitly highlighted because of its smaller percentage of total beef exports.

Note: This table provides export values for single commodities to the top 15 destinations. Only export values higher than \$2 million are reported.

¹ The EU members to which California's agricultural exports are shipped reflect only the initial destination of the product, not the EU country of consumption. Many products are distributed throughout the EU after the initial entry.

² Other commodities are those that individually account for 1 percent or less of all California agricultural exports to the EU.

³ Accurate export destination data is only available for 50 of the top 56 commodities. The commodities for which export destinations are not included are apples, turkey, wheat, eggs, chickens and mushrooms.

⁴ Other EU members include Austria, Bulgaria, Cyprus, Czech Republic, Estonia, Finland, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Romania, Slovak Republic and Slovenia. All these countries combined account for more than 5 percent of California agricultural exports to the EU.

NOTE: Totals may not equal due to rounding.

¹ This table shows destinations receiving the largest shares of total exports of each commodity for which reliable data are available. The numbers associated with each commodity correlate to the ranking in the table "Commodity Export Values and Rankings, 2007-2009."

² Accurate export destination data are only available for 50 of the top 56 commodities. The commodities for which export destinations are not included are apples, turkey, wheat, eggs, chickens and mushrooms.

³ 2008 share values were revised based on updated estimation methodology.

⁴ Hides and skins account for 46 percent of "Beef and Products" total value in 2006. Hides and skins are included in the heading "Beef and Products" from previous reports, but not explicitly highlighted because of its smaller percentage of total beef exports.

⁵ Avocados and blueberry export destinations were added to this analysis in 2009.

Weighted Average ⁷				22.0			22.5		

¹ 2008 values were revised based on updated estimation methodology.² 2008 figures were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.³ Ratios do not necessarily reflect share of the crop exported in a given year, because exports may include quantities produced in prior years and some of the current year's production may be exported in subsequent years.⁴ Farm quantity exported for dairy and products is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk and whole dry milk to their fluid milk equivalents.⁵ There is no addition for the farm quantity of milk allotted to whey exports because whey is a byproduct from cheese production. Other products including casein, lactose, milk albumin, products for infant use, pudding and rennet are converted to farm equivalent by multiplying California's share of U.S. milk production to the U.S. export quantity for these products, then applying a conversion factor of 1 pound of product to 8 pounds of milk equivalent. The same conversion factor is used for nonfat dry milk.⁶ "Grapes, All" includes grape juice, raisins, table grapes and wine.⁷ The weighted average is based on each of the 53 commodity's share of production value. Values for chickens, mushrooms, and flowers and nursery products are not included because reliable data on export quantity were not available.

JAPANESE BEETLE

Popillia japonica

Skeletonizes leaves of 200+ plants including rose bushes, grapevines, crape myrtles; also feeds on turfgrass roots.

Interception of invasive species at the border.

Truckee Border Station Manager Dan Rudolph looks through the microscope at plant material intercepted from a passenger vehicle. Roughly 5.5 million vehicles pass through this station every year. That works out to about 15,000 cars each day. In 2010, the station submitted approximately 1,500 insect samples to the department's entomology lab in Sacramento. Of those, nearly 400 were considered "actionable" pests. The station also intercepts other kinds of pests such as invasive weeds, plant and animal diseases, and even aquatic creatures that impact our waterways.

Rudolph says that most people who pass through the station are understanding of the need to protect this great state and its resources. It's important that travelers do their part to protect California's lakes, rivers, environment, habitat and agriculture. Eradicating even one invasive species—once it becomes established—could cost the state hundreds of thousands of dollars or more. In this case, an ounce of prevention is really worth a pound of cure.
