# A LETTER FROM GOVERNOR ARNOLD SCHWARZENEGGER

Dear Friends,

California's agricultural history is a story of our residents' characteristic hard work and optimism. In 1773, there were only 204 head of cattle in the state, most of them on mission land. Determined efforts in those early years produced growth and success, and by 1800, the cattle count rose to 187,000. This great increase was not an anomaly; it foreshadowed our state's tremendous agricultural future. Today, California's modern cattle farms and ranches are teeming with up to 6 million head.

In all, California agriculture produces 400 crops and \$32 billion in direct farm sales, which constitutes a significant part of our state's dynamic economy. I am proud that the spirit of ingenuity that helped to shape the foundations of California agriculture continues to guide our state's farmers and ranchers today.

However, with success, come challenges. California agriculture is threatened by old foes such as severe weather and by new ones such as bovine spongiform encephalopathy, avian influenza and other diseases and pests. Through the California Department of Food and Agriculture, we are working to protect our vast plant and animal industries from these threats. Our state's army of inspectors, scientists and health and safety officials are battling everything from criminals to microbes to ensure the safety of our food supply. This year's *California Agricultural Resource Directory* describes our protection and safety efforts in many areas — from using DNA technology to stop cattle rustlers to utilizing the latest advancements in dairy inspection and virus tracking.

My administration is committed to building on the successful legacy of California's agricultural pioneers by improving the safety of our farm

and ranch products, expanding our markets and encouraging balanced environmental stewardship. With your help, we will be successful in these endeavors and lead our state's agricultural industry into a bright and prosperous future.

I encourage you to use this resource directory to learn more about our state's agricultural industries and the people and organizations that are crucial to their success.

Sincerely,

A handwritten signature of Arnold Schwarzenegger in black ink, written in a cursive style.

Arnold Schwarzenegger

## FOREWORD

SECRETARY  
**A.G. Kawamura**

In this year's *California Agricultural Resource Directory*, we celebrate the spirit of the American Old West and the farming and ranching pioneers who worked this land. Today, as fourth- and fifth-generation farming families forge ahead with new concepts and innovations, they are implementing their own unique vision that will ensure a vibrant agricultural economy for our state.

California now produces more than 400 commodities — and behind every commodity is a face and a story. For instance, who can think of cattle without thinking of the fiercely independent cowboy? This caretaker of our working landscapes has embodied the entrepreneurial spirit and devotion to a kind of husbandry we rarely see anymore. The cowboy of yore was the only thing standing between his herd or flock and a host of predators, both human and animal. Over the years and down to the present day, the number of predators that endanger our state's agricultural commodities has grown to include viruses and insects, in addition to old-fashioned cattle rustlers.

Today's modern cowboys use old world experience and new world technology to get the job done. Scientists, technicians and field inspectors, many of whom are employed by the California Department of Food and Agriculture, assist them in their fight against would-be predators. To highlight the importance of animal health and food safety, we have devoted this publication to a closer look at our Animal Health and Food Safety Services Division. Established in 1899 as the Office of the State Veterinarian to protect animals from contagious and infectious diseases, the division now protects California's livestock and foods of animal origin from a wide range of threats.

This directory also contains the most recent information and data on the performance and output of agriculture in California. As the statistics and figures demonstrate, California's farmers and ranchers are real visionaries who have succeeded in developing new and better ways to produce food and fiber of the highest quality and with the greatest care for the environment.

As you use this resource directory to learn more about the impressive performance of California agriculture, I hope you'll also make time to discover more about the men and women who both provide and protect your food, fiber, fuel and shelter. These are the people of California agriculture, and we are proud that our future is in their hands.

# A Reason FOR Thanks

*By John Greber*

As I sit here on this cold, dark night,  
I watch the lightning strike wide and light up the sky.

I pull my hat down low and my jacket collar up,  
as I hear the boys on the crew sigh.

I grumbles to myself about the storm that's blowin' overhead,  
waiting to cover the Earth with a downpour of rain.

I shuffles to check the trap and get back to my bedroll,  
as fast as these ol' frozen feet will go without much pain.

I know tomorrow will be a long, wet ride  
as we make our circle to check and move some cattle.

I'll get some bacon and sourdough biscuits to start my  
morning for daybreak, then get right in the saddle.

But for now I peacefully lay back on my bedroll and relax,  
I hear the cattle bawl, and the coyotes call, as I stare  
up into the night.

We are blessed with horses to ride,  
and cattle to tend with pride.

So before I fall asleep I give thanks for this life,  
and remember all my cowboy friends who have passed  
over the great divide.

*Our cowboy poet, John Greber, is a third-generation cowboy who works on his family's cattle and hog ranch in Elk Grove, California. Mr. Greber is also a horseback riding instructor and horse trainer.*

# Cowboys OF THE West

## Protectors of Animal Agriculture

BY JONNALEE HENDERSON

To this day, the myths, legends and tall tales about the American cowboy stir the imaginations of people around the world. The cowboy, that iconic figure of the Old West, still conjures up images of brave, hardworking and fiercely independent characters on horseback, who by day herded cattle on the open range under a blistering sun and at night huddled around a warm campfire under the stars.

Originally known in California as buckaroos, cowboys of the Old West pursued a demanding, sometimes dangerous, occupation. It was a calling that required guts, stamina and a hard-won respect for livestock. Fearless wranglers, courageous cowhands and stalwart sheriffs inhabited this rugged terrain and helped protect and defend a country and a way of life against ever-present threats from man and nature.

Though these old timers have long ago “gone to pasture,” many of the same threats to livestock and livelihood that they struggled against are still present today. Disease, natural disasters, cattle rustling and economic hardships still exact a toll on animal agriculture.

On a daily basis, veterinarians with the California Department of Food and Agriculture’s Animal Health and Food Safety Services Division take up their regulatory reins to protect and defend the welfare of California’s livestock and poultry industry from all threats, foreign and domestic. As public servants, these professionals care as deeply about the values of the Old West as the cowboys who first lived by them.

These veterinarians, along with the division’s researchers, scientists and inspectors, work tirelessly to ensure the preservation and continuation of animal agriculture here in the West.

### Call to Serve: Heroes of Today

The Animal Health and Food Safety Services Division dates its origins back to the creation of the Office of the State Veterinarian in 1899, established to protect the health of all domestic animals of the state from contagious and infectious diseases. Today the state veterinarian oversees the division and has authority to establish quarantines, recalls or other regulations necessary to protect California’s livestock and foods of animal origin.

“Having grown up on a poultry ranch, and having been a practicing veterinarian before joining the department, I can relate to the challenges that business owners face,” said Dr. Richard Breitmeyer, California’s State Veterinarian. “I enjoy working with all segments of the livestock and poultry industries; they are progressive and want to understand the science behind the issues and what they need to do. In my experiences, the industry has always stepped up and done the right thing.”

Protecting a state as diverse and vast as California is no easy task, but the division’s leadership, partnered with industry support and the eyes and ears of private veterinarians, has led the state safely through many threats to animal and human health, including anthrax, foot-and-mouth disease, West Nile virus, tuberculosis, bovine spongiform encephalopathy and exotic Newcastle disease.

photo by Ed Williams/Sonoma Co.

They also closely monitor more than two million animals imported into California each year and encourage stewardship of agricultural lands and the environment.

“I’m proud that we consistently make decisions based on science, and we strive to maintain an understanding of the latest developments,” said Dr. Annette Whiteford, Director of the Animal Health and Food Safety Services Division. “We look at all of the livestock in the state as our herd, and we try to maximize the health of that population.”

### **A West without Borders: Today’s Challenges and Opportunities**

Globalization has changed the world dramatically since the days of the Old West. People, products and food travel the world in unprecedented numbers and at historic speeds. Traveling with them are a myriad of disease-causing microorganisms. Avian influenza is a prime example of a disease threat. The Animal Health Branch has never seen a disease spread as far and as fast.

“There are benefits to becoming part of a global world, such as increased market opportunities, but if we don’t maintain our domestic food supply we will become more dependent on other sources, like we are with our energy supply,” said Dr. Whiteford.

In addition to globalization, another challenge results from the fact that less than 2 percent of the American population live or work on farms. As California’s population becomes increasingly urbanized, communicating the threats of animal diseases becomes more of a challenge, especially since 60 percent of human diseases come from animals. Viruses that have gained recent widespread attention, such as avian influenza in poultry, have highlighted the urgent need to educate and alert the public regarding the human and environmental threats of animal disease.

### **Protecting Our Poultry Exotic Newcastle Disease**

California’s vulnerability to new diseases was highlighted in

2003 when an outbreak of exotic Newcastle disease initiated the largest multi-agency animal-health-emergency response ever undertaken in the United States. Federal and state agencies spent more than \$150 million in emergency funding to eradicate the highly contagious and deadly virus affecting poultry and other birds.

During the outbreak, California’s quarantine zone covered 46,000 square miles. The response taskforce involved 6,200 onsite employees and resulted in more than 18,000 properties quarantined. A total of three million birds were destroyed. As a result of these efforts, the disease was controlled east of the Tehachapi Mountains and away from some of the state’s top poultry producing counties.

The quick and effective control of exotic Newcastle disease would not have occurred without the cooperation of those affected: farmers, ranchers and communities. “Animal owners in California reflect the cultural diversity found throughout the state, which means that we must be able to communicate in a language and manner that is understood by each individual in order to gain their trust and cooperation,” said Dr. Whiteford. The importance of reaching each impacted owner or community member on a personal level continues to be a key part of disease control strategy.

Community support, science-based policy, industry cooperation and effective communication have allowed the Animal Health and Food Safety Services Division to quickly track and

eradicate outbreaks of salmonella, tuberculosis and a myriad of other potentially devastating diseases and viruses. This experience has also prepared the division for present and future threats, such as avian influenza.

### Avian Influenza

By the end of 2006, a devastating strain of avian influenza, a disease of birds, had ravaged poultry production in Asia, the Middle East, parts of Europe and vast regions of Africa. To date, more than 200 million chickens and ducks have been destroyed as the disease moved into previously unexposed populations.

While the ease at which this new virus moves between animals is alarming, experience indicates that, so far, the virus does not transmit easily from poultry to humans and that human cases of infection are rare. Should avian influenza reach California poultry, then a cooperative interagency effort — with the California Department of Food and Agriculture

acting as the lead agency — will act immediately to control the disease before it spreads throughout domestic poultry.

### Protecting Our Dairy Products

The Animal Health and Food Safety Services Division not only protects our state's livestock, but also food products made from livestock.

Inspectors in the division's Milk and Dairy Food Safety Branch, in cooperation with county-approved milk inspection services, routinely visit all 2,043 of the state's dairies to ensure that milking parlors and milk rooms are operated and maintained according to sanitation requirements. They also inspect milk tanker trucks and every milk processing plant to ensure that pasteurizers meet strict standards, machinery is being properly cleaned and sanitized, and that everything is operating in a sanitary manner.

The branch also responds to consumer complaints and works with the California Department of Health Services to investigate any

food-borne outbreak that might be connected to a dairy product. These rigorous dairy sanitation and food safety standards help to give California's consumers full confidence that every glass of milk they drink is safe and nutritious.

"It's professionally satisfying to work for a branch that has responsibility for the single largest agricultural commodity in California," said Dr. Stephen Beam, Chief of the Milk and Dairy Food Safety Branch. "I really marvel at the level of commitment and technical expertise exercised each day by our staff as they work alongside industry to make sure that the state's dairy products are as safe as they can be."

### Guardians of the New West

When horse and cattle theft and overall crime became an increasing problem, pioneers of the Old West turned to members of their own community to enforce order. Today, leaders in the Animal Health and Food Safety Services Division, in coordination with local sheriffs, respond immediately to any dangers that threaten California's public and animal health. In many ways they are the guardians of the New West.

For example, in 1971 when drug use in show horses became prominent, the horse industry requested drug testing at all shows, and the division's Animal Health Branch immediately responded. The branch now tests more than 488,000 horses annually to ensure the integrity and sustainability of an industry that produces goods and services valued at \$4.1 billion.

The division's Livestock Identification Branch also protects the state's livestock from theft

## A Diverse Mission to Serve Animal Health and Food Safety

Animal agriculture is a critical part of California's and the nation's food supply. No wonder then that both presidential directive and the state's Food and Agricultural Code seek to protect this key resource against the ravages of disease and food contamination. On the forefront of this battle is the Animal Health and Food Safety Services Division of the California Department of Food and Agriculture. It carries out this essential mission through its four branches and the California Animal Health and Food Safety Laboratory System.

### Animal Health Branch

The Animal Health Branch is the state's professional veterinary medical unit. It safeguards livestock populations, consumers and California's economy from catastrophic animal diseases, other health-related or agricultural problems. The branch handles diseases that require statewide coordinated resources and are not controllable on an individual animal or herd basis. By implementing programs that protect California's livestock industries and consumers, the branch helps to ensure the availability, affordability and wholesomeness of our food supply.

### Milk and Dairy Food Safety Branch

California's dairy sector provides 21 percent of the nation's milk supply and leads the nation in production with more than \$5.2 billion in farm sales. Most of California's milk production is used in the manufacture of dairy products, including cheese, butter, nonfat dry milk, ice cream and yogurt. Oversight by the state's Milk and Dairy Food Safety Branch ensures state, national and international consumers that our milk, milk products and milk-like products are safe and wholesome, meet applicable microbiological and compositional requirements, and are properly labeled.

### Bureau of Livestock Identification

The state's brand registration and inspection program protects cattle owners in California against loss of animals by theft or straying. The branch's program consists of several components: registration of cattle, horse, burro and sheep brands; inspection of cattle for lawful possession prior to movement, sale or slaughter; and assistance to local law enforcement with investigations and prosecutions involving cattle theft. This program is entirely financed through brand registration and inspection fees paid by cattle owners.

### Meat and Poultry Inspection Branch

The Meat and Poultry Inspection Branch works to protect consumers in four primary areas. First, by assuring that livestock and poultry products (from production facilities not inspected by USDA) are wholesome, unadulterated and properly labeled. Second, by assuring that meat and poultry tissue not intended for human consumption is kept out of human food channels. Third, by assuring that pet foods are processed from acceptable meat and poultry sources. And, fourth, by assuring that used kitchen grease is properly disposed or recycled.

### California Animal Health and Food Safety Laboratory System

This system of five laboratories throughout California provides quality diagnostic support to the state's animal agriculture industries. It functions as a major part of California's disease-warning system. Administered by the School of Veterinary Medicine at UC Davis, it was established as a partnership between the California Department of Food and Agriculture, UC Davis, California's veterinarians and animal agriculture. Chief among the lab's critical objectives is to protect public health with rapid and reliable diagnoses of animal diseases that affect humans.

Visit [www.cdffa.ca.gov/ahfss](http://www.cdffa.ca.gov/ahfss) to learn more about California's animal agriculture and food safety programs.

and loss. Because cattle have always been valuable, they have been stolen and sold as an easy way to make an illegal buck. The intent of the livestock identification program and the animal branding identification system is to quickly recover stolen or stray cattle and protect humans and animals from devastating diseases.

Rather than relying solely on hot-iron brands as an identification system, the cowboys of today also use laptops, bar coding technology, electronically transmitted brands and radio frequency identification tagging to track animals efficiently and quickly. Instead of flipping through bulky brand books, at the click of a mouse each animal brand is available not only by owner, but also by individual animal. Technology like this helped recover 1,338 lost or stolen cattle and calves last year, which were cumulatively valued at more than \$1 million.

## Career Cowboys

Bright, motivated people are needed to carry the state's livestock industry safely and strategically into the 21st century. State Veterinarian Dr. Richard Breitmeyer said it best: "With global animal disease, rapid movement of products and animals, and challenges with agroterrorism, there are many new and diverse opportunities for careers in animal health."

More than merely a career, animal health is a calling for anyone who enjoys ranching or farming and who wants to do something positive for the public good. "It's one of the jobs you can do and know you are making a difference," said Dr. Whiteford. "When I travel around California, I am always impressed with the abundance of food we can produce."

Just as the cowboys of old guarded this nation's cattle, so too the Animal Health and Food Safety Services Division upholds the safety and integrity of the state's livestock. Moreover, through foresight and planning, the division heads off the bad guys at the pass — whether viruses or thieves — before they adversely affect the public and environment.

# The Good, the Bad, and the Bird Flu:

*Prevent, Detect and Respond*

BY JOSH EDDY

A lot can be said about bird flu — but one of the more informed and respected voices belongs to Dr. Dennis Wilson. Dr. Wilson melds both the interests of an academic researcher with the real-world outlook of the practitioner. This is evidenced by his Ph.D. in comparative pathology and his DVM. Dr. Wilson uses this expertise in veterinary epidemiology to make sure that commercial poultry and all of California’s animal agriculture are protected from disease.

“The job is far from boring,” said Dr. Wilson who heads the department’s Emergency Preparedness and Support Unit. The key to the unit’s success is Dr. Wilson’s long-standing reputation for engaging critical collaborators with specific expertise to develop and implement solutions.

“Prevent, detect and respond” is the mantra of Dr. Wilson’s team, working together with industry and government agencies at all levels to protect the animal legacy of the West. This is no easy task. From the introduction of foreign animal diseases to natural disasters and the possibilities of a terrorist attack on the food supply — it may seem like the plot of a Hollywood movie — but it is a reality for Dr. Wilson and his team of experts. To tackle these challenges, the program primarily works in the areas of emergency preparedness and detection.

Preparedness is a complex scientific process that involves developing precautions and procedures to prevent animal health disasters. The program supports efforts to educate companies, producers and consumers to reduce the opportunity for a disease or virus to spread. With preparedness comes the need for detection, which is implemented through animal surveillance on a regular basis throughout the state. “Surveillance allows us to detect the spark before it becomes a fire,” said Dr. Wilson, “allowing quick response to the incident through our partnerships and being there to assist in recovery after the emergency is over.”

In the case of bird flu, Dr. Wilson has some concern, particularly over the confusion between bird flu and pandemic flu. The influenza virus has many

strains and some viruses tend to affect one group of species more than another. “There are strains of the influenza virus that primarily affect birds and these are generally referred to as avian influenza viruses or even bird flu,” said Dr. Wilson, “and these viruses usually do not affect people.”

However, while bird flu and pandemic flu are not the same thing, all influenza viruses have the capacity to change. There is concern that the avian influenza circulating in Asia could evolve into a strain that spreads from person to person, thereby starting a pandemic. “Because influenza viruses mutate easily and even share genes among strains, they can adapt and jump species,” said Dr. Wilson, “but this strain of avian virus has not made this adaptation.”

**BIRD FLU** *continued on page 16*

## **“Trust, but Verify.”**

**Keeping Our Milk Safe  
and Nutritious**

BY JEFF HILLARD

During the climactic years of the Cold War, president and former California governor Ronald Reagan suggested that agreements with the Soviets should be guided by the Russian proverb: “Trust, but verify.” (*“Doveryai, no proveryai”*)

This sensible principle for missile reduction applies equally well to other security issues, including milk safety. Indeed, the field staff of the department’s Milk and Dairy Food Safety Branch operates by this motto. Since inspectors cannot be on-site at dairy production facilities 24/7, they work with plant owners and managers to promote conformance with state laws and regulations, to protect public health and assure consumers that only pure and wholesome dairy products are sold.

The oversight responsibilities of this branch are huge and wide-ranging. For example, each time a parent buys a child an ice cream cone on a hot summer’s day, that youngster’s health is partly dependent on sanitary conformance inspections performed by branch staff on more than 4,000 soft-serve ice cream facilities. Without this safety verification of ice cream equipment, a sweet treat could become a not-so-sweet health risk.

Beside ice cream facilities, branch staff inspects nearly 900 dairy farms, more than 1,200 bulk milk tankers and more than 500 milk processing plants. Branch specialists are responsible for the inspection and testing, every 90 days, of nearly 400 pasteurizer units statewide to ensure their proper operation and safety controls.

## **Growing Challenges with a Growing Industry**

The sheer size of California dairy production makes oversight particularly challenging. Over the past two decades dairy cow numbers have increased dramatically, making California the largest dairy state in the nation. California milk production is 21 percent of the nation’s total and cheese production has more than doubled over the past decade. Daily, California’s dairies produce about 12 million gallons of milk. More than 99 percent of this is processed in-state into various products, which are then sold around the world.

As the only staff in state government with the necessary expertise to perform comprehensive inspections of production and processing technologies, Milk and Dairy Food Safety specialists are involved directly in the review of engineering and construction plans for dairy farms and milk plants. They examine computerized pasteurization control systems, milk evaporators, dryers, water supplies, plant-wide control networks, robotic systems and more.

## **Agency Partnerships**

The scale, scope and complexity of California’s dairy industry requires interagency efforts to maintain oversight. Branch professionals

# Guardians of the New West

*Where the Old West Meets High Tech*

BY STEVE LYLE

The Old West depicted by Hollywood is burnished in our collective consciousness. Rolling hills of and green and gold. Dusty towns of rickety wood. Brilliant sunsets. Hard-charging people.

In the real west, some of those people owned cattle and — to prevent theft and otherwise help identify their animals — found it helpful to label them. Best way to do that was a brand. And more than a century later, even though technology has advanced to include DNA testing for animal ID, the old-school technique of branding is still widely used.

“We see more animals branded than anything else,” said Greg Lawley, Branch Chief of the California Department of Food and Agriculture’s Bureau of Livestock Identification, which is charged with registering and tracking brands in California. “Branding remains a popular and colorful method of identification in our state.”

Branding occurs much the same way it always has, with irons featuring custom designs. Ranch owners register their designs with the bureau, which compiles them in a brand book used by inspectors to place lost cattle, settle ownership disputes and solve thefts. Unfortunately, there is plenty of work to do on that front. Hundreds of head are stolen every year.

There are 23,600 registered brands in California, brought forth by ranches famous and obscure. The oldest active

brand is registered to the Hearst Corporation and dates back to 1917 — the same year state government began tracking brands. Prior to that, the tracking was county-by-county. The statewide program gave investigators greater resources to hunt down rustlers.

But branding isn’t fool proof. Not every livestock owner uses a brand. And, in cases of theft, it is not uncommon to see a second brand placed over the original. So modern brand inspectors need other methods to help prove ownership, and that’s where technological advances like DNA testing are important.

Many people have become familiar with DNA testing from crime shows on television. Murder, assault and robbery cases that have been cold for years are now being solved and punishment is finally being meted out to wrongdoers. DNA technology

has not only revolutionized crime fighting in cases where the victims are humans, but has also given law enforcement agencies an effective weapon to battle ever-present and increasingly clever cattle rustlers.

“DNA testing has helped us solve several significant cases,” said CDFA senior brand investigator John Suther. “The first time we used the technique, all it took was a single hair from the tail of a calf. We matched it with the DNA of the calf’s mother, and we solved the case. It is a great resource for us.”

And since then, DNA technology has been useful in other complex cases. For example, in April 2006, Bureau of Livestock Identification agents participated in a raid in Riverdale, in Fresno County, where suspects were raising Holstein calves from stolen cattle. Once again, hair

**GUARDIANS** *continued on page 16*

# PROFILE

**TRUST** continued from page 14  
work with allied county, state and federal agencies to enhance the regulation of milk and dairy foods. Under a cooperative state and federal public health program, the branch administers regulatory actions required for Grade-A milk products shipped in interstate commerce. Under this program, staff conducts certification ratings of dairy farms, milk processors and manufacturers of single-service dairy containers.

## Investigations and Enforcement

“Trust, but verify” carries an implied further action: enforcement. Once violations are verified, enforcement of statutes and regulations must then be carried out. Although most of

the activities involve compliance, the branch uses law enforcement when consumer safety is compromised. Government exists to serve its citizens, and ensuring public safety is one of its primary services. Few things are more important and fundamental to public safety and well being than protecting the food supply.

The Milk and Dairy Food Safety Branch seeks to ensure

that California's dairies and milk processors operate in compliance with consumer protection laws and regulations. This compliance is built on both trust and oversight verification provided by branch inspectors in the field. Because of the dedication, commitment and hard work of these safety soldiers, consumers can enjoy California dairy products knowing they are tasty, nutritious and safe.

## BIRD FLU continued from page 13

Bird flu continues to circulate in many places in the world, so its entry into the United States and California is possible. “Remember, the current strain has only been shown to infect

people under very specific conditions,” said Dr. Wilson. “If the virus arrives into California, between the way that commercial poultry are raised and the measures put in place to monitor for disease, eating poultry products will continue to be safe.”

Through the dedication and professionalism of individuals like Dr. Wilson the future looks bright for California agriculture.

## GUARDIANS continued from page 15

samples from the animals gave lab technicians at the Veterinary Genetics Laboratory at UC Davis what they needed to produce DNA data that led to the animals' return to their rightful owners.

So DNA testing is a place where the Old West meets high tech and, to date, it has been a productive partnership. While the ruddy and hale Californians of old might not completely understand that people in lab coats fight crime as effectively as the local marshal, they would certainly appreciate the results. And, in keeping pace with the latest technology, the Bureau of Livestock Identification works to use all the tools available to track and protect California's sizeable livestock herds.

# Agricultural Statistical Review

## Overview

California farm and ranch producers received a record high \$31.71 billion in 2005, up fractionally from the revised 2004 revenue number of \$31.68 billion. The 2004 revenue number was originally estimated at \$31.8 billion; however, values for 2004 have been revised based on updated information received throughout 2005 for both commodity production and average prices. Although the 2005 tally remained virtually the same as 2004, major changes were apparent for individual commodities.

Cash receipts for wine grapes rose 38 percent to \$2.2 billion. This increase was realized on the heels of the largest grape crush in the state's history

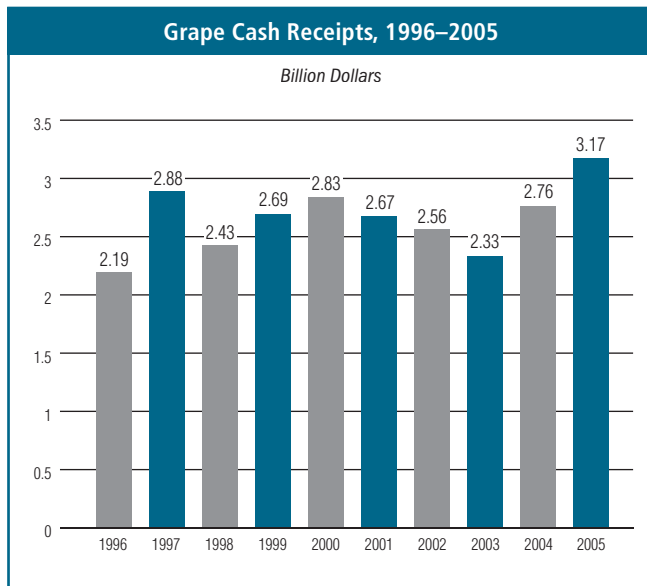

along with prices that remained stable. Other large increases in cash receipts were shown for Pima cotton, up 237 percent; grapefruit, up 92 percent; and Valencia oranges, up 53 percent. Meanwhile, most vegetable crops showed smaller cash receipts. The value of egg marketings declined 37 percent to its lowest mark since 1962.

California's agricultural sector remained No. 1 in the nation for 2005, with 13.3 percent of the U.S. value, up slightly from 13.2 percent of the national total the previous year. The state's farm revenues were more than the combined totals of Texas and Iowa, at No. 2 and No. 3 respectively.

California's dairy sector, which leads the nation in production, showed a 3 percent decline in value, to \$5.22 billion, because of lower prices paid to producers for milk. The Golden State has produced 20 percent to 21 percent of the U.S. milk supply since 2001. Most of California's milk production is used in the manufacture of dairy products: cheese, butter, nonfat dry milk, ice cream and yogurt.

California's agricultural abundance includes 400 different commodities. Among these, the state produces about half of U.S.-grown fruits, nuts and vegetables. Many crops are solely produced in California.

Commodity	Value and Rank \$1,000

**California Farm Facts**

Californians operated 76,500 farms and ranches in 2005; this is less than 4 percent of the national total. The average California operation had \$414,000 in farm sales, compared with the U.S. average of \$114,000 per farm. In 2005, California’s land devoted to farming and ranching totaled 26.2 million acres. The average farm size was 345 acres, compared with the U.S. average of 444 acres.

**California’s Top Commodities**

California’s top 20 crop and livestock commodities accounted for 81 percent of the state’s cash farm receipts. Eight commodities exceeded \$1 billion in value. Milk remained the No. 1 commodity in 2005, followed by grapes, and nursery and greenhouse products.

**Leading Counties**

California has some of the most agriculturally productive counties in the nation. According to the 2002 Census of Agriculture’s ranking of market value of agricultural products sold, nine of the nation’s top 10, and 12 of the top 20 producing counties are in California.

**California’s Top 10 Agricultural Counties, 2004–2005**

County	Total Value and Rank				Leading Commodities
	—\$1,000—				
	2004		2005		
Fresno	4,604,139	(1)	4,640,166	(1)	Grapes, Almonds, Milk, Tomatoes, Cattle and Calves
Tulare	4,037,351	(2)	4,360,854	(2)	Milk, Oranges, Cattle and Calves, Grapes, Alfalfa Hay and Silage
Kern	3,213,846	(3)	3,546,925	(3)	Almonds and By-products, Grapes, Milk, Citrus, Pistachios
Monterey	3,090,000	(4)	3,273,000	(4)	Lettuce, Strawberries, Wine Grapes, Spinach, Broccoli
Merced	2,365,494	(5)	2,388,058	(5)	Milk, Chickens, Almond Meats, Cattle and Calves, Sweet Potatoes
Stanislaus	1,978,434	(6)	1,977,596	(6)	Milk, Almonds, Cattle and Calves, Chickens, Walnuts
San Joaquin	1,613,037	(7)	1,743,294	(7)	Milk, Grapes, Almond Meats, Tomatoes, English Walnuts
San Diego	1,461,769	(8)	1,531,307	(8)	Foliage Plants, Woody Ornamentals, Avocados, Bedding Plants, Cut Flowers
Kings	1,292,090	(10)	1,407,091	(9)	Milk, Cotton, Cattle and Calves, Pistachios, Alfalfa
Imperial	1,187,254	(11)	1,286,066	(10)	Cattle, Alfalfa, Leaf and Head Lettuce, Carrots, Livestock

In 2005, Fresno, with \$4.64 billion in agricultural value, remained the No. 1 county in the nation, followed by Tulare and Kern. Thirteen counties recorded more than \$1 billion in agricultural value according to their county agricultural commissioner crop reports.

### Weather Highlights for 2005

January started with a strong upper level low-pressure system, which brought heavy rains to the North Coast and Southern California. Where weather conditions allowed, farmers applied herbicides and pesticides, pruned and shredded, and harvested their winter crops. Later in the month, upper-level high pressure displaced low pressure, bringing a warming trend. The strong high pressure resulted in record high temperatures in Southern

California. Fieldwork recovered from heavy rainfall in the previous weeks, but fog slowed harvest activities in many areas.

Weather in February was unstable. Dry conditions with temperatures warming to above normal continued from the end of January. Ample soil moisture and moderate temperatures provided excellent growing conditions. Then winter storms, following a low pressure, dropped rainfall statewide. Despite the rain, spring harvest continued to progress well.

March and April recorded considerable amounts of precipitation. Mild to moderate rain allowed fruit and nut crops to bloom well. After a week of warm and dry conditions due to a strong high-pressure ridge, most regions began to experience a more active precipitation pattern. In April, a weak high pressure brought a short period of warm and dry weather. A strong winter-like storm approached from Alaska, followed by numerous Pacific storms, which brought widespread rain and mountain snow in Northern California. Constant precipitation brought by storms provided an excellent condition for plants to bloom. Apricots and cherries were being thinned, and buds were swelling in many

Top 5 Agricultural States in Cash Receipts, 2005

Daikon	Lettuce, Head	Pigeons and Squabs	

California is the sole producer (99 percent or more) of the commodities in bold.

orange and apple orchards. However, alfalfa cuttings were hampered and cotton planting was limited due to heavy rainfall. Planting activities resumed as fields dried out.

High pressure developed across the state in early May and brought mostly sunny skies and warmer conditions. A Pacific storm moved across California and brought mild late season precipitation. As the low-pressure system weakened, a high-pressure ridge dominated the rest of the month with only a few sprinklings of rain. Warm, dry weather benefited field crops and stimulated vegetable growth.

Temperatures fluctuated in June with influence from both high and low pressures. Unseasonably strong low pressure developed and replaced the earlier high pressure, brought cooler temperature and above normal June precipitation. As rangelands continued to dry, the amount of dry grass was the largest in many years and benefited many cattle producers.

July began with cooler than normal temperatures due to residual effects from a previous low-pressure system. Temperatures slowly climbed up as heat waves swept into California. High-pressure centers were concentrated over the southwest desert and eastern Pacific. Short periods of increased humidity did not help lower the overall temperatures. Strong high pressure remained the dominant weather feature in August. A low-pressure system and several thunderstorms brought some relief from the heat waves. High pressure began to rebuild as the low weakened.

Preparation for harvest continued in orchards and vineyards. Livestock were moved to irrigated pastures, and some needed supplemental feeding as

photo by Ed Williams/Placer Co.

hot weather decreased rangeland qualities. Rice and cotton fields thrived in the summer heat, but some vegetable and fruit crops were damaged by sunburn.

September was mainly dry. An upper level low-pressure trough pushed a dry cold front across Northern California, bringing an onshore flow to the state and gusty southwest winds to the higher elevations. Dry weather also led to red flag warnings in some areas. A series of low-pressure systems then brought small weather turbulence and some rainfall.

October weather showed a typical fall pattern. Upper-level low pressure pushed into the West Coast and spread a few showers. Indian summer conditions dominated the Central Valley, with daytime high temperatures at 10 degrees above normal. Heavy rains in Imperial Valley halted cotton harvest and caused disruption to lambs on pastures. Temperatures started to warm up again as the storms exited.

A series of Pacific cold fronts pushed through Northern California in the beginning of November, bringing the first significant mountain snow of the season. Rainfall concentrated in the Sacramento Valley, and mountain snow in northern Sierra was heavy enough to impact transportation. High-pressure ridges settled over the West Coast through the end of the month, bringing mostly warm and dry conditions to California.

December began with clear and dry conditions with mostly sunny skies. Widespread fog formed

California's Top 20 Agricultural Exports, 2004–2005 <sup>1</sup>				
Commodity	Rank	2004 Export Value \$1,000	2005 Export Value \$1,000	Percent Change 2004/2005
Almonds	1	1,369,687	1,840,912	34
Cotton	2	631,892	699,042	11
Wine	3	683,788	575,306	-16
Dairy and Products	4	439,916	563,362	28
Table Grapes	5	453,862	539,941	19
Oranges, Fresh and Juice	6	345,194	365,029	6
Rice	7	280,305	319,796	14

Broccoli	17	98,945	104,049	5
Beef and Products	18	80,071	99,681	24
Lemons	19	77,375	86,367	12
Carrots	20	78,398	82,418	5

<sup>1</sup> See page 126 for complete table and footnotes.

across the Central Valley. A series of Pacific storms brought record amounts of rain to some Central Valley locations and heavy snow to central and northern Sierra Nevada. While stormy weather kept northern coasts damp, Southern California remained mostly dry and mild. The rains, however, significantly boosted new grass growth on winter pastures. Dormant season activities were underway for most crops.

### Global Marketplace

The year 2005 set a new record for California's agricultural exports, surpassing \$9 billion for the first time. This represents a 13 percent increase over 2004 and a 24 percent increase over 2003.

California exports agricultural products to almost 150 countries, but the 10 principal destinations accounted for 72 percent of the 2005 export value. The leading four destinations — European Union, Canada, Japan and Mexico — accounted for 56 percent of total exports.

For three years, the European Union has been the key destination for California agricultural exports, accounting for 22 percent of the 2005 export value. Principal commodities shipped to the European Union are almonds, wine and pistachios.

California's Top 10 Agricultural Export Markets, 2005			
Rank	Country	Export Value Millions	Leading Exports
1	European Union	2,015	Almonds, Wine, Pistachios
2	Canada	1,756	Lettuce, Strawberries, Table Grapes
3	Japan	940	Rice, Almonds, Hay
4	Mexico	591	Dairy and Products, Table Grapes, Cotton
5	China/Hong Kong	569	Cotton; Table Grapes; Oranges, Fresh and Juice
6	Korea	282	Oranges, Fresh and Juice; Almonds; Cotton
7	Taiwan	228	Cotton, Peaches and Nectarines, Table Grapes
8	India	175	Almonds, Cotton, Table Grapes
9	Turkey	124	Cotton, Rice, Almonds
10	Indonesia	98	Cotton, Dairy and Products, Table Grapes

Even though the major market for California agricultural production is still the rest of the nation, foreign markets have become relatively more important in the past six years. In 1999, only 16 percent of local production was being shipped to overseas markets, whereas in 2005 this figure was 22 percent. Clearly, California agriculture is enjoyed around the world.

Cash Income by Commodity Groups, 2003–2005 <sup>1</sup>

<sup>1</sup> Totals may not add due to rounding.<sup>2</sup> Value of marketings for 2005 is preliminary and will be revised on August 31, 2007. Values for 2004 have been revised from earlier publications. These revisions reflect updated information received throughout the year on commodity output and market year average prices.<sup>3</sup> Includes value of home consumption, value of inventory adjustments, machine hire and custom work, forest products sold, rental value of farm dwelling, government payments, and other miscellaneous farm income.

<sup>1</sup> Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

<sup>2</sup> A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

# County Statistical Data

California's counties reported an increase of 5.1 percent in the value of their agricultural production for 2005. Thirteen counties reported a value of production in excess of \$1.1 billion. Fresno continued as the leading county with an agricultural production value of \$4.64 billion, a slight increase of 0.8 percent from the 2004 value. Tulare County was second in value of production with \$4.36 billion, which is 8 percent above 2004. Kern's agricultural production increased 10.4 percent to \$3.55 billion.

## Notes to the County Data

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the

farm where produced. Values placed on pasture and range feed are included, and fresh fruit and vegetable crop values are based on the free-on-board (f.o.b.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The county agricultural commissioners' reports also provide statistics on a broader range of commodities than estimates prepared by other agencies.

Because of these concepts, the state total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service, California Field Office. The larger total value reported by the agricultural commissioners results from different definitions

**Notable Changes in County Ranks and Percentages of the State Total, 2005**

Rank	Commodity	Changes in County Rankings
1	Milk and Cream	Tulare leads with more than 27 percent of the state total
2	Grapes, All	Fresno leads, followed closely by Napa and Kern
3	Nursery Products	San Diego continues to lead with more than 19 percent of the total
4	Almonds	Kern leads with 20 percent, followed by Stanislaus
5	Cattle and Calves	Tulare is No. 1, followed by Fresno and Imperial
6	Lettuce	Monterey still leads with 60 percent
7	Strawberries	Monterey and Ventura lead with more than 60 percent of the total
8	Oranges	Tulare leads with more than half of the total
9	Alfalfa Hay	Kern leads the way, followed by Tulare and Imperial
10	Flowers and Foliage	San Diego has more than 52 percent of the total
11	Chickens	Merced and Stanislaus lead the state with more than 60 percent
12	Cotton	Fresno still leads with 34 percent, followed by Kings
13	Pistachios	Kern is No. 1, followed by Fresno and Tulare
14	Walnuts, English	San Joaquin leads, followed closely by Tulare and Stanislaus
15	Tomatoes, Processing	Fresno leads with nearly 42 percent, followed by San Joaquin and Yolo

photo by Ed Williams/San Benito Co.

used in estimating total value of production rather than cash receipts to producers.

Some counties are now including timber as a part of their crop report, following the pattern set by the County Agricultural Commissioners' Association. Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. Total value reported by the counties, including timber, is 0.2 percent more than the \$38.6 billion recorded in the table "County Rank by Gross Value of Agricultural Production, 2004–2005" on page 34.

## California Timber Industry

California has more forestland than any state except Alaska. Nearly two-billion-board-feet (equivalent to 132,000 homes) of commercial lumber are produced from California's private and public timberlands each year, making the Golden State the third largest producer of wood products in the nation. California's abundant forests could provide nearly 100 percent of the state's demand for wood.

## County Agricultural Commissioners' Reports

Copies of individual county agricultural commissioners' reports may be requested directly from each county agricultural commissioner's office.

USDA's National Agricultural Statistics Service, California Field Office publications are also available free-of-charge at [www.nass.usda.gov/ca](http://www.nass.usda.gov/ca).

Leading Timber Counties, 2005

<sup>1</sup>The data rankings were extracted from county agricultural commissioners' reports where published. Those not ranked by the counties were ranked by USDA's National Agricultural Statistics Service, California Field Office. Timber was omitted in rankings. County agricultural commissioners' reports for San Francisco and Trinity counties were not available at publication, resulting in the use of 2004 and 2003 data, respectively.

# Field Crops

California field crops experienced less than ideal weather in 2005. Many crops were damaged by excessive amounts of rain in the spring and heat waves in the summer. Beans and hay experienced slight increases in value, whereas oats and wheat values were considerably lower than 2004.

California is the leading state in alfalfa hay production and consumption. In 2005, California produced 6.9 million tons of alfalfa hay, generating \$952.2 million, the highest value among all Golden State field crops. A series of storms brought heavy rains to California during the fall planting season. Some areas recorded record high March precipitation. Rainfall not only delayed planting and harvesting activities, but also potentially lowered alfalfa hay quality. Production dropped 6 percent from 2004, but the 17 percent price per ton increase made up the loss in production and pushed a 9.8 percent increase in production value. Other hay recorded a slight increase in yield and price, and values increased 11 percent to \$198.4 million.

Snowfall in the Sierra Nevada provided sufficient irrigation water for crops. However, heavy rains and below normal soil temperatures delayed cotton planting through early May. As warm and dry weather returned later in May, crop planting progressed more rapidly. By mid-June, crop condition was rated 53 percent good-to-

excellent, 45 percent fair, and only 2 percent rated poorly. Price of Upland cotton was \$0.60 per pound, up 16 percent from 2004, but 19 percent lower than 2003. Planted acreage significantly decreased 23 percent. The production decline caused the total value of Upland cotton to drop to \$306.7 million from \$443.3 million in 2004 and \$534.6 million in 2003. California growers planted 229,000 acres of American Pima cotton, up 15,000 from 2004. The price of American Pima cotton also increased 35 percent to \$1.19 per pound, generating \$318.7 million.

Rice is one of the major field crops in California with 528,000 acres planted in 2005. Medium-grain rice contributed about 90 percent of the total rice production and acreage. Rice planting was pushed back a week behind normal due to rainfall. Both long-grain and short-grain rice experienced lower yields, but slightly higher production. Medium-grain rice had 465,000 acres successfully planted. Along with a 14 percent decline in yield, medium-grain rice production decreased 26 percent to slightly less than 35,000 thousand hundredweight (cwt). Due to supply deficiencies, the overall price jumped 43 percent from 2004, pushing an increase in production value.

It was a good year for dry edible bean production. All major beans, except blackeye, leapt in production. Lima beans increased 29 percent from 2004. Chickpeas almost doubled its production. All dry beans generated \$56 million in value, up 32 percent from 2004, the second highest percentage increase among major field crops. Despite the good signs in 2005, there has been a declining trend in overall bean production.

Wheat production took a heavy hit from the unstable weather in 2005. A total of 570,000 acres was planted and 369,000 were harvested; both numbers are the lowest in the past 10 years. Overall, production declined 22 percent and value dropped 23 percent. Winter wheat declined in acreage and yield but increased in price, leaving total production value down 21 percent from 2004. Durum wheat production was down 27 percent to 196,650 tons. Price of durum wheat did not increase because of lower supply; on the contrary, it declined 8 percent. As a result, value was slashed 33 percent from 2004.

Sweet potatoes generated \$103.5 million of value, a 29 percent increase from 2004.

***Notable Increases in Value:***

Beans, All Dry Edible .....	32%
Corn for Silage .....	22%
Hay, All .....	10%
Potatoes, Sweet.....	29%
Rice, All .....	9%

***Significant Decreases in Value:***

Corn for Grain .....	25%
Cottonseed.....	37%
Oats.....	54%
Wheat, All.....	23%

	2004	680,000	420,000	2.59	1,086,000	126.67	135,618
2005	570,000	369,000	2.29	844,650	124.67	104,458	

<sup>1</sup> Area planted includes preceding fall.

<sup>2</sup> Production is on a clean basis.

<sup>3</sup> Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

<sup>4</sup> Includes varieties not listed separately. Excludes beans grown for garden seed.

<sup>5</sup> Planted acreage is for all purposes.

<sup>6</sup> Cotton bales are 480 lbs. net-weight.

<sup>7</sup> Estimates began in 2005.

<sup>8</sup> All alfalfa forage production is the sum of alfalfa harvested as dry hay and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

<sup>9</sup> All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

<sup>10</sup> Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1996–2005.

<sup>11</sup> Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

<sup>12</sup> Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

<sup>13</sup> Sweet rice acreage has been included since the 2003 crop year, but not previous years.

<sup>14</sup> Excludes wild rice.

<sup>15</sup> Estimates began in 2000.

<sup>16</sup> Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and Southern California.

## Floriculture

The U.S. value of floriculture crops rose 1 percent in 2005 for a total of \$5.36 billion. Floriculture crops include bedding plants, flowering plants, foliage plants, cut cultivated greens and cut flowers.

California led the nation in floriculture sales with \$1.02 billion and was the only state to exceed \$1 billion. The runner-up, Florida, had a wholesale value of \$976 million in 2005. However, the number of growers in California in 2005 was 820, as compared with 907 in Florida. California and Florida accounted for 37 percent of the 36-state total value. The top five states (California, Florida, Michigan, Texas and New York) accounted for 53 percent of the total value.

According to the USDA Economic Research Service, total domestic use of floriculture crops was \$6.17 billion in 2005; of that figure, floriculture imports accounted for 14.1 percent. This means that, on average, \$56 of wholesale floriculture crops were sold to each U.S. household.

Imported floriculture crops were fierce competitors for U.S. producers. All domestic floriculture crops had increased sales, except for cut flowers, which suffered most from foreign competition. California led the country with 73 percent of total cut flower sales in 2005. Of the more than \$1 billion in domestic sales of cut flowers nationwide, \$709 million were from imports. Roses

accounted for about 40 percent of imported cut flowers at a value of \$274.7 million. Of cut roses, a new record of 88 percent was attributed to imports.

The number of U.S. cut flower producers has fallen the past two decades as cheaper imports made their way into the market. Average annual sales of cut flower growers, however, have steadily increased. This can be attributed to fewer growers putting more effort into growing high-value cut flowers. Consequently, cut flower sales per grower have experienced an upward trend.

Nationally, sales of potted flowering plants grew a modest 1 percent to about \$809 million in 2005. California led the nation in sales of potted flowering plants in 2005 with a value of \$199.3 million. This was 25 percent of total U.S. value and more than twice Florida's sales of \$94.6 million.

Poinsettias, orchids and florist chrysanthemums remained the top sellers, though a survey of the largest producers showed that sales for poinsettias were down 2 percent from 2004. Orchids were the fastest growing in terms of sales of all potted flowering plants, more than tripling sales of a decade ago. Chrysanthemum sales also increased from 2004. California also grew the most poinsettias and orchids, with poinsettias averaging \$4.10 per pot and orchids averaging \$8 per pot nationwide.

# Fruit and Nut Crops

California accounts for 49 percent of the national fruit and nut production and 65 percent of the national value of fruit and nut crops. In 2005, the state produced 15.2 million tons of fruits and nuts, 15 percent more than in 2004. The state's total production value in 2005 was \$10.5 billion, up 9 percent from 2004.

Grapes continue to be the top-valued fruit and nut crop with \$3.17 billion, increasing 15 percent from the previous year. Crops with record production in 2005 were wine grapes, table grapes, pecans, strawberries, tangerines and walnuts. California accounted for nearly all the national production of almonds, figs, raisin grapes, olives, Clingstone peaches, persimmons, dried plums, pomegranates and walnuts.

## *Significant Increases in Production:*

Grapes, Wine.....	35%
Kiwifruit.....	39%
Olives .....	32%
Oranges, Valencia .....	86%
Plums, Dried.....	88%
Tangerines.....	32%

## *Notable Decreases in Production:*

Apricots.....	20%
Avocados .....	30%
Cherries, Sweet.....	28%
Peaches, Freestone .....	12%
Pears, All.....	25%
Pistachios .....	18%

photos by Ed Williams/Yuba Co.

The year started with heavy rain, which continued to produce record amounts of precipitation through March and April. The mild to moderate rain allowed fruit and nut crops to bloom well. May already showed signs of summer, with daytime temperatures reaching the 80s in Northern California, while highs in Southern California hit the 90s. The seasonal cycle of irrigation and cultivation continued in grape vineyards and nut orchards. The rest of the summer was hot and dry, with temperatures slowly reaching the 100s in some areas. Almond, raisin grape, table grape, wine grape and pomegranate harvests were in full swing by late summer. October weather showed a typical fall pattern. Grapefruit harvest was delayed due to poor maturity in some areas and Navel orange harvest was delayed due to rains. The year ended with a series of Pacific storms that brought record amounts of rain to some Central Valley locations and heavy snow to central and northern Sierra Nevada.

According to the USDA Economic Research Service, per capita tree nut (shelled basis) consumption in the U.S. for 2004–05 was 3.58 pounds, a 5 percent increase from 2003–04. Almond per capita consumption decreased by 12 percent in 2004–05, from 1.12 pounds to 0.99 pounds. Walnut use increased 8 percent, from 0.50 pounds to 0.54 pounds. Pistachios experienced a 47 percent increase in per capita consumption, up to 0.28 pounds per person for 2004–05.

All citrus consumption decreased by 7 percent in 2004–05, to 99.09 pounds per person. Per capita orange consumption dropped 5 percent in 2004–05, but lemons went up by 8 percent to 7.26 pounds.

Fresh grape consumption went up by 2 percent in 2004–05, from 7.65 pounds per person to 7.78. Strawberry for fresh consumption increased 3 percent, while the peach and nectarine per capita for fresh consumption decreased by 1 percent.

<sup>1</sup> Non-bearing shown only in year when acreage surveys were conducted.

<sup>2</sup> Return at processing plant door or packinghouse door.

<sup>3</sup> Acres of raisin-type grapes enrolled in the California Raisin Industry Diversion (RID) program were: 1996-2000 - zero; 2001 - 41,000; 2002 - 27,000; 2003-2005 - zero. These acres were deducted from bearing acres before calculating yield.

<sup>4</sup> Raisin-type production is the fresh equivalent of dried and not dried.

<sup>5</sup> Acreage by county, variety and year of planting for 2005 are available upon request.

<sup>6</sup> These crops are almond hulls, apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus byproducts and orchard biomass.

# Grape Crush

The Final Grape Crush Report includes all grape tonnage crushed during the 2005 season. Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in administrative code.

## Summary of Grape Tonnages and Prices

The 2005 crush totaled 4,330,064 tons, up 20 percent from the 2004 crush of 3,615,278 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 2,235,170 tons, up 36 percent from 2004. The 2005 white wine variety crush totaled 1,521,221 tons, up 34 percent from 2004. Tons crushed of raisin-type varieties totaled 467,483, down 36 percent from 2004, while tons crushed of table-type varieties totaled 106,190, down 6 percent from 2004.

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining tonnage, each processor was required to report the estimated equivalent tons of grapes crushed for concentrate. For the 2005 season, this total was 550,296 tons, approximately 13 percent of the 2005 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type or variety.

California grape growers received prices in 2005 for raisin and table grapes that were, on average, below the 2004 prices. While the prices received for red and white wine grapes were, on average, above the 2004 prices. The 2005 average price of all varieties was \$533.04, up 11 percent from 2004.

**Average Prices for the 2005 Crop by Type: <sup>1</sup>**

Red wine grapes.....	\$633.60, up 1 percent
White wine grapes.....	\$506.90, up 4 percent
Raisin grapes.....	\$164.25, down 18 percent
Table grapes.....	\$121.36, down 39 percent

<sup>1</sup>These price levels have not been adjusted for inflation.

**Leading Grape Varieties and Districts**

In 2005, Chardonnay accounted for the largest percentage of crush volume with 17.1 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 12.5 percent of the total. The next eight highest percentages of grapes

crushed were all wine varieties, with the exception of Thompson Seedless.

Grapes produced in District 4 (Napa County) received the highest average price of \$2,986.78 per ton, up 2 percent from 2004. District 3 (Sonoma and Marin counties) received the second highest return of \$1,871.44, virtually unchanged from 2004.

The 2005 Chardonnay price of \$714.38 was up 3 percent from 2004, while the 2005 Cabernet Sauvignon price of \$937.23 was down 4 percent from 2004. The 2005 average price for Merlot was \$729.28, down 9 percent from 2004, while the Zinfandel average price of \$472.31 was down less than 1 percent from 2004.

**Grape Crush Tonnage and Price, 1988–2005**

<sup>1</sup> Other categories include minor and mixed varieties.

Grape Variety Synonyms

Alicante Bouschet – Alicante	Malvasia Bianca – Vennentino, Vermintino	Refosco – Mondeuse
Beauty Seedless – Black Beauty	Marechal Foch – Foch	Rubired – Tintoria
Blaufraenkisch – Lemberger	Mataro – Mourvedre	Ruby Seedless – King Ruby
Burger – Monbadon	Meunier – Pinot Meunier	Sangiovese – Sangiovetto, Brunello
Chardonnay – Pinot Chardonnay, Chardonnay Musque	Moscato Gaillo – Muscat Yellow	Sauvignon Vert – Muscadelle
Cinsaut – Black Malvoisie, Black Malvasia	Muscat Blanc – Muscat Canelli,	St. Emilion – Ugni Blanc, Trebbiano
Crimson Seedless – Red Crimson	Muscat Blanc A Petits Grains	Syrah – French Syrah, Shiraz, Syrah Noir
Emerald Seedless – Black Seedless	Muscat Hamburg – Black Muscat	Tempranillo – Tinta Roriz, Valdepenas
Flame Seedless – Red Flame	Negrette – Pinot St. George	Touriga Nacional – Touriga
Gamay (Napa) – Gamay, Valdiguie	Nero D'Avola – Calabrese	Trousseau – Bastardo
Gray Riesling – Trousseau Gris	Palomino – Golden Chasselas	White Riesling – Johannisberg Riesling, Riesling
Grenache – Grenache Noir	Pinot Gris – Pinot Grigio	
Italia – Muscat Italia	Princess – Melissa	
Malaga – White Malaga	Red Globe – Rose Ito	

## Livestock and Dairy

California's total cash receipts from livestock and livestock products were \$8.45 billion in 2005; this is a 1 percent drop from 2004. Milk, cattle and chickens remained the state's leading commodities, generating more than 90 percent of livestock receipts for the year. Production value of eggs dropped 37 percent from 2004 to \$182 million, the commodity's lowest value since 1962.

While both the dairy and beef cattle industries in California had profitable years in 2005, cow inventory trends were on different tracks. Dairy cow numbers in California expanded 30-thousand head above 2004. While this year-to-year growth was less than in the 2000 to 2002 period, the month-to-month growth in cow numbers was consistent much of the year. Reasons for the slower annual growth in dairy cow numbers from previous years were varied, but they include increased challenges in obtaining permits to build new dairies and restrictions on expanding existing dairies; a growing number of environmental regulations in California; dairies that were sold the past two years in national dairy herd retirement programs; and dairies from Southern

California relocating outside the state. Additionally, the number of dairy replacement heifers shipped into California in 2005 was below the numbers seen in the 2000 to 2002 period. This can be attributed in part to the ban on imports from Canada.

In contrast, the beef cow inventory in California in 2005 took a different course and declined 20-thousand head from the previous year. This continued a downward trend that began in the mid-1990s. Unlike the dairy industry, which is composed of mainly confinement operations, beef cows graze on pastures. Competition from other crops, urban growth and higher costs of production compared to many other states is taking a toll on beef cow numbers in California. Unlike the national beef cow inventory, which expanded for the second consecutive year in 2005, it appeared that California was not participating in the build-up phase of the U.S. beef cattle cycle.

California surpassed Wisconsin in milk production in 1994 and is closing the gap in cheese production. Milk is the No. 1 agricultural commodity in California. Major dairy counties usually rank high in agricultural sales in the state. The top five counties in agricultural sales are Fresno, Tulare, Kern, Monterey and Merced. Other than Monterey, these counties are major producers of dairy products, cattle and calves. Tulare ranked No. 1 in milk and cream production, followed by Merced, Stanislaus, Kings and Kern.

Milk production climbed steadily over the past few years. At the same time, the structure of the industry changed, as has the way milk is used. Many dairies have merged; big dairies have grown larger while some smaller dairies have left the industry. More milk is produced on fewer farms and handled by fewer dairy firms each year. As milk production continues to grow, new uses of milk have developed. There are three general uses of milk: fluid milk for consumers, cheese, and other dairy products. Fluid milk had the biggest proportion of milk use three decades ago. Modest increases in fluid milk consumption have paled in comparison with the dramatic growth in cheese production over the past 30 years. Cheese production now takes up the biggest proportion of milk produced each year. Domestic cheese consump-

tion has not increased as rapidly as production, resulting in a higher percentage of milk products exported to other countries.

Honey had the greatest percent increase in value among livestock products in 2005 at 42 percent; however, the industry is barely recovering from the huge drop in production from the previous year. Honey production in 2003 was 32.2 million pounds, but in 2004 this number dropped to 17.6 million pounds due to a decline in the yield per colony. As a result, production value in 2004 was only 40 percent of 2003's figure. The industry recovered in 2005 and yield per colony was the highest in the past

photo by Ed Williams/Humboldt Co.

five years. Even though the price was 84 cents per pound, 17 cents lower than 2004 and 55 cents below 2003, the 2004 value of production climbed back to \$25.2 million.

Cash receipts for cattle and calves show an increasing trend in the past six years, reaching \$1.74 billion in 2005. Price was the main reason for this increase. Even though there was no significant change in cattle and calves production, prices rose steadily over the six-year period. The other red meat species, hogs and pigs, declined 10 percent, and sheep and lambs fell 3 percent in value despite increasing prices.

<sup>1</sup> Preliminary 2005 data.

<sup>2</sup> Excludes cottage cheese.

<sup>3</sup> Includes Cheddar, Colby, washed curd, stirred curd, Monterey and Jack.

<sup>4</sup> Includes low-fat and nonfat cottage cheese. Fat content is less than 4 percent.

<sup>5</sup> Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

<sup>6</sup> Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink." Contains less than 10 percent milk-fat required for ice cream.

<sup>7</sup> Not shown when fewer than three plants reported or individual plant operations could be disclosed.

Milk Cow Average Prices Received, 1996–2005 <sup>1</sup>

1998	510	0.4	110	0.7	270	3.4	1,810	95.5	750	17.5	1,060	78.0
1999	450	0.3	70	0.4	250	3.3	1,830	96.0	730	17.0	1,100	79.0
2000	370	0.3	70	0.3	230	2.9	1,830	96.5	730	16.5	1,100	80.0
2001	370	0.3	80	0.3	250	2.4	1,800	97.0	700	15.0	1,100	82.0
2002	380	0.3	80	0.3	200	1.9	1,740	97.5	640	13.5	1,100	84.0
2003	390	0.3	80	0.3	210	1.9	1,720	97.5	620	12.5	1,100	85.0
2004	365	0.2	80	0.3	180	1.5	1,675	98.0	575	12.0	1,100	86.0
2005	390	0.2	80	0.3	180	1.5	1,650	98.0	550	11.0	1,100	87.0

<sup>1</sup> Starting in 1997, the 200+ Head class was broken out into 200+ Head, 200-499 Head, and 500+ Head classes.

Grazing Fee Annual Average Rates, 1996 – 2005 <sup>1</sup>				
Year	Per Animal Unit <sup>2</sup>	Cow-Calf		Per Head
		Dollars Per Month		
1996	10.10	12.20		11.90
1997	10.60	13.00		12.00
1998	11.50	14.50		12.90
1999	12.10	15.00		12.50
2000	12.30	15.50		12.70
2001	13.00	16.00		13.50
2002	12.80	16.50		14.00
2003	13.50	17.50		14.30
2004	14.50	19.50		15.50
2005	15.40	20.50		17.00

<sup>1</sup> The average rates are estimates (rates over \$10.00 are rounded to the nearest dime) based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Agricultural Survey.

<sup>2</sup> Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf \*0.833).

<sup>1</sup> Live weight; adjustments made for changes in inventory and for in-shipments.

<sup>2</sup> Live weight; excludes custom slaughter for use on farms where produced and inter-farm sales within the state.

<sup>3</sup> Receipts from marketing and sale of farm slaughter.

<sup>4</sup> Hogs and pigs receipts for 1996 include allowance for higher average price of state in-shipments and out-shipments of feeder pigs.

# Vegetable and Melon Crops

California continued to be the leading fresh market state, accounting for 40.8 percent of the harvested area, 62.8 percent of the production, and 55.8 percent of the value.

The total value of California's 2005 fresh and processing vegetable and melon production was \$6.18 billion, down from last year's revised total of \$6.86 billion. All lettuce is still the leading vegetable crop in value of production at \$1.47 billion followed by tomatoes at \$942 million.

Carrots, garlic, head lettuce, leaf lettuce and summer storage onions were among the crops showing increased values of production. Artichokes, asparagus, broccoli, cauliflower and celery were among the crops experiencing declines in value.

According to the USDA Economic Research Service, per capita use of fresh vegetables and melons in the United States decreased slightly to 174 pounds in 2005. Consumption increased for asparagus, sweet corn, all melons, leaf and romaine lettuce, and all tomatoes. Declined use was seen for snap beans, broccoli, cabbage, carrots, cucumbers, head lettuce, onions, green peas and all potatoes.

Per capita consumption of U.S. processing vegetables increased 2 percent to 124 pounds. Consumption of freezing vegetables decreased 1 percent to 20.7 pounds, but use of canning vegetables increased 3 percent to 103.3 pounds.

### *Notable Increases in Production:*

Cucumbers.....	15%
Peppers, Chili .....	7%
Pumpkins .....	14%
Spinach, Fresh Market .....	15%

### *Significant Decreases in Production:*

Cabbage, Fresh Market .....	17%
Melons, All.....	17%
Tomatoes, All.....	26%
Tomatoes, Processing .....	18%

At the beginning of January, wet conditions slowed activity in many vegetable fields. Where conditions permitted, vegetable planting proceeded. March brought warmer temperatures, which stimulated vigorous growth in many vegetable fields. April's cool temperatures slowed vegetable development, and wet fields hindered field activities. Spring vegetable plantings were two weeks late in some locations due to the persistent rain.

The beginning of summer brought cool temperatures, slowing vegetable development statewide. As the summer continued, however, above normal temperatures reduced production and damaged some vegetables. Growers took advantage of the mild, warm weather later in August and began preparation for planting some crops while continuing to harvest others. October began with normal weather patterns, which were encouraging to the vegetable growers. The end of the year brought moderate weather that favored growth and development of vegetable seedlings.

2005	195,000	—	68,886,000	—	852,913	

<sup>1</sup>The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

<sup>2</sup>Estimates discontinued in 2002.

<sup>3</sup>Estimates began in 2000 and discontinued in 2002.

<sup>4</sup>Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1995 – 266,000 cwt.; 1996 – 292,000 cwt.; 1997 – 278,000 cwt.; 1998 to 2005 – 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.

<sup>5</sup>Estimates began in 2000.

<sup>6</sup>Estimates began in 1998. Included in summer storage onions.

<sup>7</sup>Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.

<sup>8</sup>Estimates began in 2002.

<sup>9</sup>Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.

# California Agricultural Exports

The year 2005 set a new record for California agricultural exports, surpassing \$9 billion for the first time. This represents a 13 percent increase over 2004 and a 24 percent increase over 2003.

The export value of California's top 55 commodities increased by 15 percent from 2004 to 2005. In 2005, 42 of the top 50 principal products increased in value, while 12 products decreased in value, and only one remained almost unchanged. California's top 10 agricultural exports increased by 19 percent in 2005. This is despite drops in exports of wine and dried plums, each falling by more than 15 percent.

Almonds have been the top export commodity for several years. The almond crop showed a 34 percent increase in export value in 2005, most of which is explained by higher supply. Almonds, pistachios and walnuts were in the top 10 exported commodities. These three nut varieties are also within the top four exports to the European Union, with a combined net export value of more than \$1.5 billion.

California exports agricultural products to almost 150 countries, but the 10 principal destinations accounted for 72 percent of the 2005 export value. The leading four destinations — European Union, Canada, Japan and Mexico — accounted for 56 percent of total exports. For three years, the European Union has been the key destination for California agricultural exports, accounting for 22 percent of the 2005 export value. Principal commodities shipped to the European Union are almonds, wine and pistachios.

Even though the major market for California agricultural production is still the rest of the nation, foreign markets have become relatively more important in the past six years. In 1999, only 16 percent of local production was being shipped to foreign markets, whereas in 2005 this figure was 22 percent. Clearly, California agriculture is enjoyed around the world.

## Methodology

California's agricultural export statistics are developed by the Agricultural Issues Center (AIC) at UC Davis in consultation with the California Department of Food and Agriculture. Data to compute agricultural exports are derived from official government sources, published industry sources, and unpublished information from government and industry.

Export quantities and values for U.S. and California port districts are from the Department of Commerce trade data posted on the United States International Trade Commission online database (<http://dataweb.usitc.gov>). Canadian import (value) data are from Strategis, Canada's online database (<http://strategis.ic.gc.ca/engdoc/main.html>).

If the California export price is not available for a particular product, the Agricultural Issues Center uses the U.S. average export price for that commodity in order to provide a dollar value. Production quantities and values are from various USDA sources, such as the National Agricultural Statistics Service, Economic Research Service and Agricultural Marketing Service.

Agricultural Issues Center export estimates differ from other sources, such as those of the USDA's Economic Research Service (ERS), on methodological issues. The ERS estimates are based on a state's share of production of the exported commodity. It is assumed that, for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use port data, without direct links to where the product originated. The AIC export figures correspond to commodities produced within the state. Products that originated in another state and were exported via California ports are not included in these statistics.

In most cases the final AIC report presents the export data at the individual commodity level. For instance, exports of a given fruit in fresh, canned and dried forms are added up and listed under the name of the fruit, although the estimation of fresh fruit exports may differ from the methodology used for canned and dried fruit.

The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA and Food and Agriculture Organization of the United Nations are applied. For the 2005 report, the Agricultural Issues Center followed the same methodology applied in 2004 and 2003, with the exception of lemons and pears. Some of the previously published figures for 2004 and 2003 were reviewed and adjusted, based on new information obtained from various sources.

The methodology for lemons changed slightly in 2005. AIC now uses California's share of U.S. lemon production and multiplies this by U.S. total exports obtained from the U.S. International Trade Commission to calculate California export of lemons.

For pears, AIC now uses a combination of Canadian import data of fresh pears from California, data from the U.S. International Trade Commission and data obtained from the California Pear Advisory Board.

Agricultural Commodity Export Values and Rankings, 2004 – 2005

## California Agricultural Exports

<sup>1</sup> "Beef and Products" include exports of hides and skins. Hides and skins account for 54 percent of beef and products total value. Hides and skins are included in the heading "Beef and Products" from previous reports, but not explicitly highlighted because of its smaller percentage of total beef exports.

<sup>2</sup> 2004 figures were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>3</sup> 2004 figures were revised based on updated port data from the U.S. Department of Commerce/International Trade Commission.

<sup>4</sup> New commodity to the top 55 list.

<sup>5</sup> 2004 figures were revised based on updated Canadian import data.

<sup>6</sup> "Bell and Chili Peppers" is identical to commodity labeled "Peppers" in previous reports.

<sup>7</sup> "Other Products" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; and (b) animal and plant products marketed in such small quantities that they are not included in the top 55 leading commodities.

<sup>8</sup> 2004 figure revised based on updated data.

<sup>1</sup> The European Union (EU) member countries to which California exports are shipped reflects only the initial destination of the product, not the country of consumption. Many products are distributed throughout the EU after the initial entry.

<sup>2</sup> “Other Commodities” are those that individually account for 1 percent or less of all California agricultural exports to the EU.

<sup>3</sup> Accurate export destination data is only available for 48 of the top 55 commodities. The commodities that export destinations are not included are apples, turkey, wheat, eggs, chickens, avocados and mushrooms.

<sup>4</sup> “Other EU Members” include Austria, Cyprus, Czech Republic, Estonia, Finland, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Slovak Republic and Slovenia. All these countries combined account for less than 5 percent of California agricultural exports to the EU.

Walnuts	short tons	152	355	43
Wheat	bushels	3,590	28,155	13
<b>WEIGHTED AVERAGE <sup>6</sup></b>				<b>26</b>

<sup>1</sup> Conversion factors from the United States Department of Agriculture/National Agricultural Statistics Service are used in these calculations.

<sup>2</sup> The ratio is higher than 100 because volumes of past season inventories were exported in 2005.

<sup>3</sup> Farm quantity exported for "Dairy and Products" is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk and whole dry milk to their fluid milk equivalents.

<sup>4</sup> There is no addition for the farm quantity of milk allotted to whey exports because whey is a byproduct from cheese production. Other products, including casein, lactose, milk albumin, products for infant use, pudding and rennet are converted to farm equivalent by multiplying California's share of U.S. milk production to the U.S. export quantity for these products, then applying a conversion factor of 1 pound of product to 8 pounds of milk equivalent. The same conversion factor is used for nonfat dry milk.

<sup>5</sup> "Peppers, Bell and Chili" is identical to commodity labeled "Peppers" in previous reports.

<sup>6</sup> The weighted average is based on each commodity's share of production value.

**JonnaLee Henderson, Policy Analyst**

# Thank You, Mr. Undersecretary!

A.J. Yates retired as undersecretary in January 2007 after working for no fewer than four agency secretaries at the California Department of Food and Agriculture (CDFA).

Following three decades of farming in Fresno County, Yates started his second career — as a public servant — at CDFA in 1991. He worked for secretaries Henry Voss, Ann Veneman and William (Bill) Lyons Jr. until 2000. Following that, he was tapped by then-U.S. Department of Agriculture Secretary Veneman as administrator

of the federal agency's Agricultural Marketing Service. Yates returned to CDFA in 2004 under Secretary A.G. Kawamura.

A.J. Yates is one of the leading statesmen of California agriculture — a rare talent with a deep, intuitive understanding of both farming and government.

*Thank you, A.J., for your vision and leadership.*

*We wish you all the best!*
