Contra Costa Sniffer Dogs

THE NOSE KNOWS

The Nose Knows

by Adrian Woodfork

On any given morning, Bella, the golden lab can be found nosing around Contra Costa County. Be it on a conveyor belt at FedEx in Concord or plowing through a pile of boxes at UPS in Richmond, Bella is always up for the task. Her job requires putting her best foot (nose) forward to sniff out packages sent through the mail containing fruits, vegetables and plant materials coming into California without labels identifying the contents. She will work tirelessly for four to five hours, motivated entirely by her love for dog biscuits and a willingness to please.

Bella and inspector Cecilie Siegel make up one of three dog-detector-teams located in Contra Costa and San Bernardino counties. In the short period that Bella has worked in this three-year pilot program, she has alerted her handler to dozens of boxes of contraband that could play host to invasive pests that threaten California's \$31.4 billion agricultural industry.

Started by the U.S. Department of Agriculture, the detector-dog program took root at the Los Angeles International Airport in 1984. Now, more than 65 dog teams are working throughout the country at 21 airports and delivery services. Although Bella is specifically trained to sniff out plants and produce, many other canines are used for drugs, explosives, meat and live-animal detection. These dogs go through extensive training for eight to 10 weeks in Orlando, Florida, to develop their instincts to seek out and expose illegal cargo.

Bella's personality makes her a perfect fit for the job. The No. 1 desirable trait for a sniff dog is to have a strong food drive, followed closely by a desire to please. The combination of love for food and trainer is a formula for success in the dog-training business. Although Bella is well loved and cared for, she does not live in the home of her trainer. In Bella's case, she is kept in a secure and temperature-controlled kennel in

Courtesy of Contra Costa County

her trainer's backyard, where she is fed a special diet of premium dog food; never human food. In caring for detector dogs, it is important to limit their exposure to various odors commonly found inside homes. This is purposely done so the dog does not become desensitized to odors and aromas that they are trained to alert to, such as plants and produce.

For five years, the California Department of Food and Agriculture used dog teams at airports, post offices and mail services throughout the state. In 2001, due to financial limitations, the program was dropped. However, there was never any doubt about the important role these dogs played in California's battle to keep invasive pests at bay. Bella could be an influential spark to re-ignite a great idea. With continued success of the federally funded program in Contra Costa and San Bernardino counties, it will hopefully be possible for additional detector dog teams in California.

A Letter from Governor Arnold Schwarzenegger

Dear Friends,

California has built its economic success on the foundation of our vibrant agricultural industry. Our fertile lands have been cultivated by hard-working families and individuals, carving out farms and ranches in the landscape and producing renowned commodities for the world to enjoy. These pioneers' knowledge and dedicated labor helped to create one of the most recognized agricultural industries on the planet. And with the advent of the California Department of Food and Agriculture, the quality of our state's in-demand food supply has become a shining legacy.

To maintain our reputation for incomparable food products, the Department of Food and Agriculture, Department of Pesticide Regulation and other state and federal resources are working hard to meet today's industry challenges with dynamic solutions. This year's California Agricultural Resource Directory outlines the industry's impressive output and describes how the cooperative strategies of highly-trained agency professionals have yielded great successes to protect our agricultural products.

My administration is committed to ensuring that our agricultural industry remains economically strong, and I am looking forward to seeing our industry promote environmentally-sound practices. The agricultural sector, its professionals and our government are working hard to ensure a bright future, and I encourage you to use this directory to learn more about the strategies and policies that are contributing to our agriculture's success.

Sincerely,

A handwritten signature of Arnold Schwarzenegger in black ink.

Arnold Schwarzenegger

Foreword

BY A.G. KAWAMURA, SECRETARY
CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE

MARY-ANN WARMERDAM, DIRECTOR
CALIFORNIA DEPARTMENT OF PESTICIDE REGULATION

Californians want their government to act efficiently, effectively and cooperatively—in other words, they want government to act smart. That's why it is so critical that state and local governments work together to craft practical and workable solutions to the challenges that face our state. This year's *California Agricultural Resource Directory* highlights key areas where such cooperation is paying huge dividends for our economy, our health and our environment.

The partnership between county agricultural commissioners and state agencies is an excellent example of what can be achieved when different levels of government focus on the big issues of importance to producers and consumers. With the state being threatened constantly with invasive pests that could wreak havoc on our food supply, the economy and environment, it is crucial that pesticides employed to combat these invaders are used safely. Californians should therefore be heartened to know that the state has the largest and best-trained pesticide enforcement organization in the country

with more than 400 inspector biologists from county commissioner offices overseeing local enforcement under state Department of Pesticide Regulation (DPR) supervision.

California's counties are also working cooperatively with the federal government to pilot innovative programs to stop invasive pests from entering our state. One of the most promising programs uses dog-detector teams to sniff out potential pest-infested contraband that could decimate our natural resources and our economy. You'll read about Bella the golden Labrador retriever who works in Contra Costa County and who has successfully detected dozens of unmarked boxes and packages carrying fruits, vegetables and plant materials that could play host to exotic pests and diseases.

During the citrus freeze in January 2007, knowledgeable county biologists prevented damaged fruit from reaching consumers, allowed good fruit to move, and provided critical data on crop damages to state and federal agencies to assist with recovery efforts.

Consumers also benefit from the partnership between the California Department of Food and Agriculture's Division of Measurement Standards and county sealers of weights and measures. When someone buys a product that is scanned at the checkout counter at the local grocery store or fills up his or her car at the gasoline pump, county and state professionals work cooperatively to ensure that people "get what they pay for."

California's sheer size and varied growing areas requires a coordinated partnership between state and local agencies to protect our millions of consumers, our sensitive and beautiful environment, and our complex economy. While it is all too often assumed that different levels of government don't cooperate, CDFA, DPR and its local government partners demonstrate day in and day out that cooperation is not only a reality, but, more important, it works.

COUNTY AGRICULTURAL COMMISSIONERS & SEALERS:

Our Partners in Protecting California

ALTHOUGH THE WORK OF AGRICULTURAL COMMISSIONERS/SEALERS IS MOSTLY BEHIND THE SCENES, THE OUTCOME OF THEIR WORK AFFECTS THE LIVES OF EVERY CALIFORNIAN, EVERY DAY.

by Jonnalee Henderson

Partnership to Protect California

A parking meter charging 25 cents for 15 minutes, a half cord of firewood sold at the local bait and tackle shop for \$60, and gasoline that costs \$3.23 a gallon: In each of these situations, as a consumer, how do you know that you are getting your money's worth? Since most people don't carry scales, measuring tapes and meter readers, to whom do we trust to carry out this responsibility?

Enter your county agricultural commissioner and sealer of weights and measures. Anytime something is sold based on count, measure or weight, the agricultural commissioner/sealer's office, in partnership with the California Department of Food and Agriculture, ensures this exchange is based on accurate devices. This means state and local entities work together to check all scales, pumps, scanners and meters to protect consumers, producers, wholesalers and retailers.

This is but one of many hats that an agricultural commissioner/sealer wears. They also serve as the local pesticide-use enforcers, pest detectors, fruit and vegetable inspectors, seed and nursery inspectors, quarantine enforcers and farmers' market certifiers. If that is not enough, some have mosquito abatement, animal control and air pollution

control duties as well. Although the work of our 55 agricultural commissioner/sealers and their 1,900 professionally licensed staff is mostly behind the scenes, the outcome of their work affects the lives of every Californian, every day.

"We do it because it is something that gets in our blood. Every day you go home, you get a great deal of satisfaction knowing that you are doing a job that protects people, agriculture and the environment," says Earl McPhail, Ventura County's agricultural commissioner since 1978.

With 2006 marking their 125th-year anniversary, agricultural commissioners/sealers are as etched into California's history as the land and culture itself. In 1881, the same year Billy the Kid was marauding through the Midwest and Thomas Edison and Alexander Graham Bell formed the Oriental Telephone Company, the first California state convention of horticulturists began. The participants at that convention resolved that every county would appoint a horticultural commissioner to protect and promote the agricultural interests of California.

Over the years the name has changed to agricultural commissioner and the scope of duties has expanded, but the mission has remained the same: To protect and promote agriculture, citizens and the environment.

"There are a tremendous number of issues facing agriculture in California and regulatory changes are continuous. Our challenge is to find ways to make them work for our areas," says Ed Meyer, who has served as the Contra Costa County Agricultural Commissioner for 11 years, and is a 34-year veteran of the county department of agriculture.

Discussing various aspects of the Solano County Medfly project are (left to right): James Shattuck, DPR's County/State Liaison; Anthony Jackson, USDA-APHIS Domestic Program Coordinator; Jerry Howard, Solano County Commissioner/Sealer; and Kevin Masuhara, CDFA's County/State Liaison.

Protecting through Partnerships

With their depth of knowledge and ties to the local community, county agricultural commissioners are a critical thread in the fabric of agriculture. Frank Carl says that a successful commissioner builds a network of communication and develops the relationships necessary to deal with problems before they happen. Carl has served as commissioner for Sacramento County for the past 17 years and has worked in agriculture with various counties for 34 years.

These local connections include working relationships with health inspectors, vector agencies, planning departments and boards of supervisors. They also keep open lines of communication with the California Department of Food and Agriculture and California Department of Pesticide Regulation.

“Because commissioners are locally based and are usually long-term residents of their area, they have a real depth of knowledge about the issues in their counties,” explains Kevin

Masuhara, California Department of Food and Agriculture’s liaison with the agricultural commissioners/sealers. “Having worked in agriculture all my life, it’s nice to work around government officials who are committed to doing a good job that benefits agriculture.”

Masuhara explains that during the 2006 citrus freeze, the county commissioner staff conducted all of the fruit inspections and distributed critical data regarding fruit damage to state departments. Since they knew where the packing sheds were and had longstanding relationships with the growers, these commissioners helped ensure that freeze-damaged products did not enter the marketplace.

“Through the commissioner/sealer partnership with state agencies, we have a shared responsibility and are working together to solve many of the same issues. The bottom line is that we want the state to have a healthy, robust agriculture and environment that is good for the economy and good for our citizens,” says Masuhara.

Courtesy of Los Angeles County

Protecting Agriculture and the Environment

Through their critical partnership with the Department of Pesticide Regulation, commissioners/sealers serve as the pesticide-use regulators, ensuring that commercial pesticide users are certified and that pesticide products are used safely.

“The dread of every agricultural commissioner is an outbreak of a serious pest in their county. This can devastate the local economy and environment,” says Carl. “It’s a challenge when you have to do a general spray treatment in order to protect the county, and you’re dealing with urban residents who don’t understand the benefit of these pest measures.”

Carl explained that ever since he has been a commissioner there has always been at least one major pest to deal with. “When I first started there was Dutch elm disease and then the gypsy moths. More recently there have been guava fruit flies, oriental fruit flies, glassy winged sharpshooters and Asian long-horned borers.”

McPhail recalls a time in 1994 when his staff prevented a potentially devastating outbreak of the Mediterranean fruit fly, one of the world’s most destructive fruit flies. Due to the hunch of one staff member, they left a trap out two weeks later than normal. This caught some of the first fruit flies to enter the county, initiating an immediate eradication effort that quickly eliminated all the flies before they became a serious infestation.

“This kind of stuff happens every day,” says McPhail. “When you do your job well and think out of the box, it’s surprising what kind of results you can have.”

Talk to any commissioner/sealer and they will tell you the same thing—California has the most extensive and effective agricultural commissioner/sealer structure in the nation. For this reason, other parts of the country look to California for guidance in implementing similar systems in their states.

“California has the largest and best-trained pesticide enforcement organization in the country,” says James Shattuck, the Department of Pesticide Regulation’s liaison with the county agricultural commissioners. “More

Your County Connection to Agriculture ...

than 400 inspector biologists from agricultural commissioner offices in all 58 counties oversee local enforcement under the department's supervision. No other state has this kind of strong enforcement in the field."

A Career as an Ag Commissioner/Sealer

Some start as pest control advisers, others as biologists or farmers, but all commissioners have a few things in common—they enjoy working with growers, they are proud to make a difference in their local areas, and they strive to recruit motivated, bright individuals into their line of work. They often recruit through pest detection programs and by visiting agricultural colleges, high schools, FFA field days and other agricultural promotional events.

"For most of us, it's not just another job, it's something we grow into," says Carl. "Our staffs are dedicated, and they are interested in agriculture. They are making a difference, and they go the extra mile to do it well."

ACTIVITIES OF THE CALIFORNIA COMMISSIONERS & SEALERS

Even if you don't produce commercial crops or apply pesticides for a living, your county agricultural commissioners and sealers work hard for you. Their job is to protect people, the environment and our food supply. In the process, they carry out a wide range of activities — everything from protecting farm workers to consumers and from regulating pesticide use to inspecting crops for quality. Here is a snapshot of typical activities in the life of a commissioner/sealer ...

PEST EXCLUSION provides the first line of defense for California agriculture. Inspections help to protect against insect and disease pests that may be introduced by movement of plants and other items through normal trade channels. This program also involves inspections of plant material shipped to other states and countries and the issuance of certificates documenting compliance with their entry requirements.

PEST DETECTION is the second line of defense against exotic pests through the early detection of new introductions before they become widely established. Traps are placed in primarily urban areas to detect such insect pests as Mediterranean and Mexican fruit flies, gypsy moth, Japanese beetle and a host of other pests. Through early detection, the likelihood of these pests becoming established is lessened and the cost and environmental impact of eradication is minimized.

PEST ERADICATION programs are conducted following the discovery of an introduced pest. Often these projects are partially or completely under the jurisdiction of the California Department of Food and Agriculture. However, the county agricultural commissioner is regularly involved as the liaison to local government.

continued on page 12

Courtesy of Tulare County

PEST MANAGEMENT involves managing nuisance pests of agriculture and human health. Many of these pests are recently introduced species that became established despite the best efforts of the commissioners to keep them out. Commissioners also conduct programs

to establish and distribute biological controls for troublesome pests.

PESTICIDE USE ENFORCEMENT is a complex program that covers far more than its name implies. This program was developed to provide for the proper, safe and efficient use of pesticides essential for production of food and fiber and for protection of public health and safety. It also protects the environment from potentially harmful pesticides by prohibiting, regulating or ensuring proper stewardship. An important focus of the program is agricultural and pest control workers to ensure safe working conditions, proper use of protective equipment and training for employees who work with or around pesticides.

SEED CERTIFICATION involves inspections at retail and wholesale businesses where seeds are sold. Samples are drawn for germination and purity testing. Labels are inspected for compliance with state requirements.

NURSERY INSPECTION entails checking the growing, propagation, production and sale of nursery stock to assure cleanliness from pests, true variety and vigorous-healthy plants for sale to the consumer.

FRUITS, NUTS AND VEGETABLE STANDARDIZATION ensures compliance with California's minimum standards regarding quality and marketing of all produce commercially grown or marketed in the

state. Direct marketing regulation and organic law enforcement also provide for local protection to growers, marketers and consumers.

EGG INSPECTION provides for inspection of egg retailers and packers to enforce state and federal health, quality and grade standards.

APIARY INSPECTION emphasizes the registration and site location of honeybee colonies.

CROP STATISTICS are compiled and recorded in the annual county crop report, which details gross production and value of local commodities.

"THAT EQUITY MAY PREVAIL" COUNTY SEALERS OF WEIGHTS & MEASURES

Under the general direction of California Department of Food and Agriculture and in cooperation with various federal, state and local jurisdictions, the county sealer inspects, tests and certifies the accuracy of numerous devices, functions and activities associated with commerce.

COMMERCIAL DEVICES are those used in channels of trade to determine a value based on weight, measure or count. County sealers test the performance of commercial devices using standards that are traceable to world standards in order to maintain uniformity.

QUANTITY CONTROL ensures that packaged goods have the proper weight, measure, or count.

PETROLEUM PRODUCTS and related advertising and labeling regulations are strictly enforced to provide product identity and information to the seller and buyer.

LOCAL PESTICIDE REGULATORS:

Making the System Work

by Mary-Ann Warmerdam

Director, Department of Pesticide Regulation

The size and diversity of California agriculture poses a major challenge for effective pesticide regulation. From the cool forests on the North Coast, to thousands of acres of trees and vines in the Central Valley, to urban nurseries that produce an array of landscape plants, pest management must be conducted safely and effectively.

Against this daunting backdrop, our system is recognized as the best in the nation. To understand why it works so well, look at the unique relationship between the Department of Pesticide Regulation (DPR) and our county agricultural commissioners.

As DPR's partners, ag commissioners are the local enforcement agents for pesticide laws and regulations. They hold various enforcement options: revoking or suspending the right of a pest control company to do business in a county, prohibiting harvest of a crop that contains illegal residues, and issuing civil and criminal penalties.

Equally important are their proactive efforts to promote compliance with pesticide law through presentations to community and industry groups, training sessions for pesticide users, informal or formal compliance actions (such as warning letters), and corrective interviews.

Farmers must obtain site-specific permits from their commissioner to buy or use many agricultural chemicals. The commissioner evaluates the proposed use to determine if the pesticide can be used safely, particularly in sensitive areas, such as wetlands, residential neighborhoods, schools, or organic fields. State law requires commissioners to ensure that applicators take precautions to meet local needs and public safety.

Based on this evaluation, the commissioner may deny a permit to use a pesticide, or may require specific use practices to reduce any hazards. For example, a permit may be

Courtesy of Napa County

County staff perform pre-application inspection.

contingent upon the method of application, time of day, weather and use of buffer zones. Such local permit conditions carry the force of state law and are strictly enforceable.

When issuing a permit, a commissioner must consider the need for a particular pesticide and whether a safer pesticide or better method of application could be used to prevent misapplication or drift. They also enforce regulations to protect ground and surface water from pesticide contamination. To do this, they may work with regional water boards and the State Water Resources Control Board.

Investigating every reported pesticide injury is another important duty. Commissioner staffers interview victims and employers (when the illness occurred at work) to determine if the law was broken and enforcement action is needed.

Local pesticide enforcement also reaches beyond the farmgate. For example, maintenance gardeners are checked to ensure they are licensed to apply pesticides and that pesticides are labeled for professional landscaping. Home pesticide applications, such as structural fumigations for termites, are also checked to confirm that structural pest control employees have proper training and equipment.

THE SYSTEM *continued on page 16*

Measuring California

ENSURING CONSUMERS GET WHAT THEY PAY FOR

by Josh Eddy

Most of us take it on face value that the amount shown at the gas pump correlates to the amount of fuel we purchased, or that the price listed on the supermarket shelf is the price we pay at the checkout. Can you believe someone actually keeps track? From supermarket scales to gas pumps and everything in between, county and state officials work year round to ensure that consumers get what they pay for.

Bringing accuracy to weighing and measuring devices in California and protecting consumers and businesses from unfair marketing practices is the role of the department's Division of Measurement Standards. This work is done in direct partnership with the state's 55 county sealers of weights and measures. Each county has staff that test and evaluate measuring devices and investigate consumer complaints. The seal on every commercial gas pump is a certification of accuracy; that's every pump at every gas station throughout the state!

Kurt Floren, Los Angeles County's Director of Weights and Measures, knows firsthand the vast scope of responsibility that falls upon county staff. Within Los Angeles alone, more than 220,000 weighing and measuring devices are used commercially. It is the county's goal to reach 100 percent annual inspection rate on all

of these devices. "Many dedicated and skilled officials work daily, quietly and with little public recognition to ensure that equity prevails for both consumers and businesses," says Floren. "Our satisfaction is knowing the importance of what we do."

As an example of consumer protection, a statewide survey was conducted in 2006 that evaluated 1,007 stores for price scanner accuracy (the price on the shelf matched the scanned price of the item at checkout). Of the surveyed stores, 83 percent charged the correct amount on all products sampled. This demonstrates that consumers can have confidence while shopping—be it at supermarkets, retail stores or restaurants. For those businesses that did not pass the survey, department and county staff worked with them to gain their compliance.

Weights and measures is a science that affects each of us on a daily basis: From testing and evaluating octane levels in gas to avoid "pinging," to inspecting water meters in private apartment buildings, and to protecting against deceptive or misleading consumer packaging. These are just some of the duties that weights and measures officials fulfill to protect us. It is a field where professionals work in partnership not just at a state level, but also on national and international levels. The division evaluates, tests and approves all commercial weighing and measuring devices used in the state. If foreign suppliers wish to sell such devices within the state, the supplier must meet California's standards, which the division will certify through direct evaluation and testing at the manufacturers location.

California's Division of Measurement Standards is a world-class institution that is playing a vital national role as the future for alternative and renewable fuels grows. Early in 2008, California proposes to establish regulations for hydrogen

The “Light Brown Everything Moth”

by Jay Van Rein

“This bug gets no respect—it should be called the Light Brown Everything Moth.”

When a scientist tries to tell a joke, it usually lands with a dull “thud.” In this case, the scientist—who will remain nameless to protect the unfunny—was speaking to a group of colleagues gathered for a meeting of the Technical Working Group (TWG), which had been formed to advise the California Department of Food and Agriculture regarding the threat posed by the Light Brown Apple Moth (LBAM). The pest, native to Australia and found fairly sparsely elsewhere around the globe, was discovered for the first time in California’s Bay Area and Central Coast regions in early 2007.

Admittedly, the punch line lacks punch unless, of course, you happen to be a plant. Or you are a gardener, or a farmer, or just someone who is fond of the community’s flora and would like to see it stick around awhile longer.

The “apple” in “Light Brown Apple Moth” makes it a monumental misnomer. Take a look around you. See any plants? If you’re the LBAM, every last leaf on every last green, growing plant around you is probably on the menu. Crops? Yes. Pine trees? Oak trees? Double-yes. Roses, shrubs, granny’s heirloom tomatoes? Affirmative. Jerusalem artichoke and St. John’s Wort, for goodness sake? Those, too. Add ‘em all up and you’re well over a thousand plants threatened by this quarter-inch moth.

For some of these “host plants,” the damage is done directly to the fruit as the moth larvae eat. For most plants, though, the caterpillar eats away at the softest parts—new shoots on branches, young leaves and the like. This stunted growth can result in a less-productive fruit tree, a deformed landscape plant, or a weakened and more disease-prone forest canopy.

Beyond the physical damage to plants, the LBAM generates a series of secondary complications, including trade barriers imposed by nations that refuse our crops and plants in order to avoid infestation; quarantine restrictions imposed on growers, farmers’ markets, packing houses and others involved in agriculture; and increased use of pesticides by property owners who want to protect their yards, gardens and crops. In the worst-case scenario—no eradication, resulting in spread to the rest of the state and beyond—each of these consequences would be broadened and perpetuated.

The responsible response, as concluded by technical experts and public officials alike, is clear: Contain, suppress and eradicate the LBAM infestation before it reaches a point of no return. The viable alternatives are conventional pesticides that would work quickly but have unintended effects on beneficial insects and other elements of the environment; organic-approved pesticides such as Bt (*Bacillus thuringiensis*), which are less problematic for the environment but would take longer to be effective and would threaten some “non-target” insects such as native butterflies and moths; and application of a moth pheromone, which would take a year or more to be effective but would be highly targeted to the LBAM population and benign for other insects, animals, the environment and the public.

“One of the few constants in agriculture is innovation,” says CDEFA Secretary A.G. Kawamura. “Years ago, we wouldn’t have had a lot of choices in how to eradicate an infestation like LBAM, but when we sat down and considered the range of options, the list was

MOTH *continued on page 16*

MOTH *continued from page 15*

indicative of just how far the field of non-invasive alternatives has advanced. Not one of the leading candidates was a conventional insecticide, and several were approved for use on organic crops.”

The pheromone approach emerged as the preferred alternative based both on science and on good public policy. There were complicating factors—public reaction to aerial treatments and a need to quickly ramp up the supply of the pheromone, for starters—but the consensus among agricultural officials, scientists and growers was resounding: We have an appropriate and effective treatment available, and we must act now, before the infestation spreads beyond our capability to eradicate it.

“When we are confronted by a regional problem like the LBAM infestation, the stakes are enormously high,” says Monterey County Agricultural Commissioner Eric Lauritzen. “There is a very real risk that this pest could become permanently established in California if we don’t work quickly and cooperatively to contain and eradicate it. Beyond the eradication treatments, we are working with state and federal officials, along with the affected industries, to impose strict quarantines and close off any

pathways the insect might use to spread. Our staff has the critical local knowledge and experience it takes to make that happen quickly. It is through a collaborative effort that we can effectively limit the infestation’s spread as we work toward eradication.”

Agricultural commissioners like Eric Lauritzen in Monterey County are tapped to help communicate with local leaders about the eradication effort, and they also identify and work with local growers, packing houses and other facilities that must comply with quarantine regulations. Commissioners also provide pesticide use enforcement expertise to ensure that treatments are performed safely and effectively.

Which brings us all back to the Light Brown Everything Moth—and to the realization that somewhere in California today, a teenager with a backpack, or a manager with a briefcase, or a tourist with a satchel is on the way home from a trip abroad, carrying a mango or a flower or some other piece of nature that was just too irresistible to leave behind—but should have been left nonetheless. And again we will turn to the innovators in agriculture for a way to protect the state’s crops, environment, habitat and economy.

MEASURING *continued from page 14*

fuels, becoming the first state to develop preliminary standards that other states and nations may follow. By being a leader and developing new regulations for hydrogen fuel, the division will help the state meet its environmental goals of reducing greenhouse gas emissions.

So the next time you visit the pump, purchase groceries or wonder if there really is a difference between fuel octane levels—rest assured that there is a small, dedicated group of weights and measures professionals checking the accuracy of everything. The Division of Measurement Standards, in partnership with California’s County Agricultural Commissioners and Sealers Association, works hard to protect California’s consumers and businesses alike, measuring California and ensuring consumers get what they pay for.

THE SYSTEM *continued from page 13*

Since many pesticides are used in non-agricultural settings—sanitizers in municipal water treatment plants, disinfecting chemicals in food service facilities and hospitals—pesticide laws may overlap other areas where workplace safety is involved. So commissioners also work with the state departments of industrial relations and health services, and consult with the California Department of Forestry and its federal counterpart about pesticide use on forestlands.

Anyone with questions or concerns about how pesticides are being used in their area may contact their county agricultural commissioner by looking in the county government section of their phone book’s white pages. Or callers may use DPR’s toll-free 1-87PestLine (1-877-378-5463) for a quick transfer to their local office.

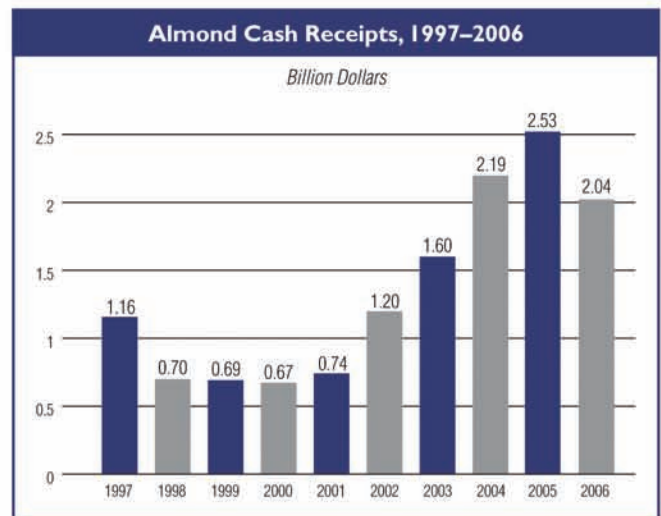

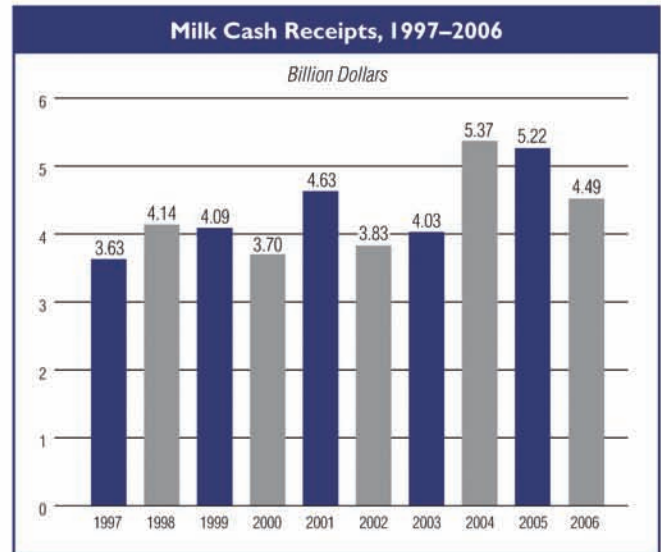

Agricultural Statistical Review

2006 Overview

California agriculture saw a 4 percent drop in the sales value of its products in 2006. The state's 76,000 farms and ranches received \$31.4 billion for their output, down from the all-time high of \$32.8 billion reached during 2005. The state's agricultural sales first exceeded the \$30 billion mark in 2004, when \$30.9 billion in receipts was tallied.

Low milk prices experienced by California's dairy sector contributed to the drop in agricultural sales. Cash receipts for milk totaled \$4.49 billion, down 14 percent from \$5.22 billion in 2005. The price that producers received fell from \$13.92 to \$11.58 per hundred pounds of milk sold during the year. Despite the decline in revenue, milk remained California's No. 1 farm commodity, and the Golden State retained its ranking as the nation's leading dairy producer by a wide margin. California produced 21 percent of the U.S. milk supply in 2006, 23 percent of the cheese, 31 percent of

the butter, 50 percent of nonfat dry milk, and 15 percent of the ice cream. The state's dairy farms have increased their milk output every year since 1978; the 3.4 percent increase in overall output in 2006 continued this trend.

Grape and almond growers also saw revenue declines during 2006 of 9 percent and 19 percent, respectively. Wine grape prices held firm, but there were fewer grapes to sell in 2006 compared with the huge 2005 crop. The size of the 2006 almond crop increased 22 percent to a record 1.15 billion pounds, causing prices during the first part of the marketing season to fall to \$1.87 per pound, from the final price of \$2.81 received for the 2005 crop.

California remained the No. 1 state in cash farm receipts in 2006, with its \$31.4 billion in revenue, representing 13.1 percent of the U.S. total. The state's farm revenues were more than the combined totals of No. 2 Texas and No. 3 Iowa.

California's agricultural abundance includes 400 different commodities. Among these, the state produces about half of U.S.-grown fruits, nuts and vegetables. Many crops are solely produced in California.

California Farm Facts

The number of farms operated in California during 2006 was 76,000, less than 4 percent of the national total. The state was home to 10 percent of U.S. farms with sales of \$500,000 or more during the year. The average California farm or ranch operation produced \$413,000 in commodity sales during the year, more than 3 times higher than the U.S. average of \$114,000 per farm. In 2006, California's land devoted to farming and ranching totaled 26.1 million acres, down less than 0.5 percent from the previous year. The average farm size was 346 acres, compared with the U.S. average of 446 acres.

California's Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$25 billion in value for 2006. Ten commodities exceeded \$1 billion in value. Avocados joined the top 20 list for 2006. Milk remained the No. 1 commodity in 2006, followed by grapes, and nursery and greenhouse products.

Leading Counties

California has some of the most agriculturally productive counties in the nation. According to the 2002 Census of Agriculture's ranking of market value of agricultural products sold, nine of the nation's top 10, and 12 of the top 20, producing counties are in California.

California's county agricultural commissioner reports showed a slight decrease of 0.9 percent in the value of their agricultural production for 2006. Fourteen counties reported a value of production in excess of \$1.01 billion. Fresno continued as the leading county with an agricultural production value of \$4.84 billion, an increase of 4.4 percent from the 2005 value. Tulare County was second in value of production with \$3.87 billion, 11.2 percent below 2005. Monterey had an increase of 4.3 percent in production with \$3.49 billion, moving the county to third in value. Kern's decrease of 2.1 percent to \$3.48 billion in agricultural production dropped the county to fourth in value.

California's Top 10 Agricultural Counties					
County	Total Value and Rank				Leading Commodities
	(\$1,000)				
	2005		2006		
Fresno	4,640,166	(1)	4,843,392	(1)	Grapes, Almonds, Tomatoes, Poultry, Cattle and Calves

Weather Highlights for 2006

January began with a sequence of dynamic Pacific storm systems, which brought heavy rain to Northern and Southern California. The abundance of rain caused flooding in some fields and delayed planting dates. Heavy rainfall caused increased spraying of herbicides. However, the rain was highly favorable for several grain crops. Later in the month, there was a high-pressure ridge over the West Coast, which brought dry and mild weather. As a consequence of the high-pressure, there were cooler temperatures and dry conditions. Fieldwork finally resumed, but not in places where water was standing.

Dry and unseasonably warm weather conditions persisted from the end of January, while February weather was variable. A cold front moved over Northern California bringing showers to the mountains. Daytime highs in the Central Valley and Southern California dropped 20 to 25 degrees.

Ample soil moisture and modest temperatures created outstanding growing conditions. Fieldwork continued in preparation for spring planting.

March and April brought a substantial amount of precipitation. Mild temperatures and a large quantity of rainfall prompted fruit and nut crops to bloom.

A wet weather pattern persisted at the beginning of April. There were strong Pacific storm systems that moved across the West Coast, which resulted in a considerable amount of rain and mountain snow in Northern California. Nectarines, other stone fruits and apricots were being thinned. Harvesting of all citrus fruit resumed after being halted due to wet soil and rainy conditions. However, alfalfa cuttings were damaged by precipitation, and cotton and rice plantings were delayed by the wet conditions. Planting resumed as the fields dried out.

High pressure across the state in early May led to sunny skies and very warm conditions. A storm system associated with a Pacific low brought showers and cool air into Northern and Southern California. Modest high-pressure ridges persisted for the remainder of May causing warm and dry conditions for the state as temperatures reached normal. Hot and dry weather boosted field crop growth and caused small grains to dry.

Top 5 Agricultural States in Cash Receipts, 2006

State	Rank	Total Value <i>Billion Dollars</i>
California	1	31.4
Texas	2	16.0
Iowa	3	15.1
Nebraska	4	12.0
Kansas	5	10.3

Crop and Livestock Commodities in which California Leads the Nation

Almonds	Dates	Lettuce, Leaf	Pistachios
Apricots	Eggplant	Lettuce, Romaine	Plums
Artichokes	Escarole/Endive	Melons, Cantaloupe	Plums, Dried
Asparagus	Figs	Melons, Honeydew	Pomegranates
Avocados	Flowers, Bulbs	Milk	Raspberries
Beans, Dry Baby Lima	Flowers, Cut	Milk Goats	Rice, Sweet
Beans, Dry Large Lima	Flowers, Potted Plants	Nectarines	Safflower
Beans, Green Lima	Garlic	Nursery, Bedding Plants	Seed, Alfalfa
Bedding/Garden Plants	Grapes, Raisins	Nursery Crops	Seed, Bermuda Grass
Bee Colonies	Grapes, Table	Olives	Seed, Ladino Clover
Boysenberries	Grapes, Wine	Onions, Dry	Seed, Sudan Grass
Broccoli	Greens, Mustard	Onions, Green	Seed, Vegetable and Flower
Brussels Sprouts	Hay, Alfalfa	Parsley	Spinach
Cabbage, Chinese	Herbs	Passion Fruit	Squash
Cabbage, Fresh Market	Honey	Peaches, Clingstone	Strawberries
Carrots	Jojoba	Peaches, Freestone	Tomatoes, Processing
Cauliflower	Kale	Pears, Bartlett	Turnips
Celery	Kiwifruit	Peas, Chinese	Vegetables, Greenhouse
Chicory	Kumquats	Peppers, Bell	Vegetables, Oriental
Cotton, Amercian Pima	Lemons	Persimmons	Walnuts
Daikon	Lettuce, Head	Pigeons and Squabs	

California is the sole producer (99 percent or more) of the commodities in bold.

Photo by Ed Williams / Sacramento County

Temperatures in June were unstable with influence from both high- and low-pressure systems. Patterns of low pressure brought cooler temperatures and minimal precipitation. The need for irrigation increased as a high-pressure system brought hot weather. Hay drying conditions were improved with warm temperatures.

July began with cooler than normal temperatures due to a low-pressure trough. Later, heat waves swept across California. Record-setting temperatures damaged crops and caused the deaths of substantial numbers of livestock and poultry. Subtropical moisture circulated around the high-pressure system and increased humidity, with unusually warm overnight temperatures.

High-pressure systems continued through the first couple weeks of August. Moisture began circulating due to a low-pressure system that caused thunderstorm activity. A low-pressure system generated heavy showers and temperatures became cooler than normal. Livestock were moved to irrigated pastures and dry foothill pastures. Some livestock received protein and other supplements as hot weather decreased forage quantities. Cotton, corn and beans progressed well with the moderate temperatures.

September was mainly dry. A fall-like pattern set up over California with an upper-level high-pressure ridge. Very dry air and dry grasses signaled high fire dangers across much of the state that led to red flag warnings in some areas.

Weather in October displayed typical dry and mild fall patterns. An upper-level, high-pressure system was centered over the four-corner region that caused some light rain in the northern and central coast. For interior portions of Southern California, including the Imperial Valley, temperatures were below normal. A series of cold fronts passed through the state, but the only effect was cooler temperatures with no significant precipitation.

The first active storm system began in November and shifted southward from the Pacific Northwest, bringing the first significant snow of the season. There was steady precipitation in the northern Central Valley and also in the mountains of Northern California. A series of weak Pacific frontal systems passed through the Pacific Northwest and brought occasional showers and cooler temperatures to California.

December began with a cold front that caused wet weather across California. A series of Pacific weather systems brought showers and cool temperatures with widespread freezing across the interior valleys of Northern California and the Central Valley. At the end of December, another Pacific storm system approached Northern California spreading showers and cooler temperatures across the northern coast, while Southern California remained dry and warm. Ranges and pastures were in better condition as result of the rain.

California's Top 20 Agricultural Exports, 2005 – 2006 ¹				
Commodity	Rank	2005	2006	Percent Change
		Export Value \$1,000	Export Value \$1,000

Global Marketplace

California's agricultural exports reached another new record with nearly \$9.8 billion in 2006. This represents a 5 percent increase from 2005. In 2006, 24 percent of California's agricultural production was shipped to overseas markets.

California exports agricultural products to more than 150 countries. The top 10 export destinations account for 85 percent of the 2006 export value of the 48 commodities for which there is accurate export destination data. The top three destinations—European Union (EU-25), Canada and Japan—account for nearly 60 percent of the 48-commodity total.

The top 55 export commodities account for \$8.3 billion or 85 percent of total exports while the remaining 15 percent were associated with other products and mixtures. Wine export values increased 28 percent from 2005 to an all-time high of nearly \$736 million. The export price of wine increased 21 percent from 2005 and accounted for the majority of the increase in export value.

From these impressive export gains, it is easy to see that California agriculture is enjoyed around the world.

California's Top 10 Agricultural Export Markets, 2006			
Rank	Country	Export Value	Leading Exports
<i>Million Dollars</i>			
1	European Union-25	2,071	Almonds, Wine, Pistachios

¹ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

¹ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

² Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

³ Based on values published in the county agricultural commissioners' annual crop reports.

⁴ Share of U.S. production based on 2002 Census of Agriculture.

⁵ The 2006 price and value are based on the 2005 California average price.

⁶ Extracted from county agricultural commissioners' annual crop reports.

⁷ Includes sunflower, safflower and canola.

⁸ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

⁹ Includes cut flowers, potted plants, foliage plants, bedding plants and indoor decoratives.

County Statistical Data

California's counties reported a slight decrease of 0.9 percent in the value of their agricultural production for 2006. Fourteen counties reported a value of production in excess of \$1.01 billion. Fresno continued as the leading county with an agricultural production value of \$4.84 billion, an increase of 4.4 percent from the 2005 value. Tulare County was second in value of production with \$3.87 billion, 11.2 percent below 2005. Monterey had an increase of 4.3 percent in production to \$3.49 billion, moving the county to third in value. Kern's decrease of 2.1 percent to \$3.48 billion in agricultural production dropped the county to fourth in value.

Notes to the County Data

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm where produced. Values placed on pasture and range feed are included, and fresh fruit and vegetable crop values are based on the free-on-board (f.o.b.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The county agricultural commissioners' reports also provide statistics on a broader range of commodities than estimates prepared by other agencies.

Because of these concepts, the state total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service,

Notable Changes in County Ranks and Percentages of the State Total, 2006

Rank	Commodity	Changes in County Rankings
1	Milk and Cream	Tulare leads with more than 26 percent of the State total
2	Grapes, All	Fresno leads, followed closely by Kern and Napa
3	Nursery Products	San Diego continues to lead with more than 18 percent of the total
4	Cattle and Calves	Tulare is number one, followed by Stanislaus and Imperial
5	Almonds	Fresno leads with 19 percent, followed by Kern
6	Lettuce	Monterey still leads with 65 percent of the State total
7	Strawberries	Monterey and Ventura lead with more than 60 percent of the total
8	Oranges	Tulare leads with more than half of the total
9	Alfalfa Hay	Kern leads the way, followed by Tulare and Imperial
10	Chickens	Merced and Stanislaus lead the State with more than 56 percent
11	Flowers and Foliage	San Diego has more than 51 percent of the total
12	Walnuts, English	San Joaquin leads, followed closely by Tulare and Stanislaus
13	Tomatoes, Processing	Fresno leads with nearly 39 percent, followed by San Joaquin and Yolo
14	Cotton	Fresno still leads with 34 percent, followed by Kings
15	Rice (Excl. seed)	Colusa leads with more than 28 percent, followed by Butte

California Field Office. The larger total value reported by the agricultural commissioners results from different definitions used in estimating total value of production rather than cash receipts to producers.

Some counties now include timber as a part of their crop report, following the pattern set by the County Agricultural Commissioners and Sealers Association. Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. Total value reported by the counties, including timber, is 0.2 percent more than the \$38.3 billion recorded in the table “County Rank by Gross Value of Agricultural Production, 2005-2006” on page 34.

California Timber Industry

California has more forestland than any state except Alaska. Nearly two billion board feet (equivalent to 132,000 homes) of commercial lumber are produced from California’s private and public timberlands each year, making the Golden State the third largest

Photo by Ed Williams / Shasta County

producer of wood products in the nation. California’s abundant forests could provide nearly 100 percent of the state’s demand for wood.

County Agricultural Commissioners’ Reports

Copies of individual county agricultural commissioners’ reports may be requested directly from each County Agricultural Commissioner’s Office. For your convenience, a listing of offices is included in the phone directory section of this publication. Many of the counties also publish these reports on their Web sites. USDA’s National Agricultural Statistics Service, California Field Office publications are also available free-of-charge at www.nass.usda.gov/ca.

California’s Leading Timber Counties, 2006					
Timber Rank	County	Timber Volume <i>1,000 Bd. Ft.</i>	Total Agricultural Value (Including Timber) <i>\$1,000</i>	Timber Value <i>\$1,000</i>	Timber Percentage of Total Agricultural Value <i>Percent</i>

¹ The data rankings were extracted from county agricultural commissioners' reports where published. Those not ranked by the counties were ranked by USDA's National Agricultural Statistics Service, California Field Office. Timber was omitted in rankings. Trinity County Agricultural Commissioner's Report was not available at publication. The last year available (2003) was used for this report.

¹ Trinity County Agricultural Commissioner's Report was not available at publication. The last year available (2003) was used for this report.

² Includes trees, shrubs, vines, bedding plants, bulbs and turf not included in flowers and foliage.

³ Includes cut flowers, potted plants, foliage plants and indoor decoratives.

Field Crops

California field crops experienced a 6 percent decline in total value of production from 2005 with a total at \$3.34 billion in 2006. While the value of production showed a decrease, California's acreage and production increased. The harvested acreage increased by 5 percent and production by 1 percent from 2005.

California is the leading state in alfalfa hay production and consumption. In 2006, California produced 7.14 million tons of alfalfa hay, generating \$828 million, the highest value among all field crops. Record rainfall in March and April delayed the start of the 2006 alfalfa hay season in California and reduced the availability of higher quality hay. The spring rains, along with record high temperatures in July, pushed alfalfa hay yields to the lowest point in eight years. Production dropped 1 percent from 2005, with a 13 percent decrease for production value. Other hay also showed a decline in yield and price, as values decreased 12 percent to \$175 million.

Cotton planting was delayed due to wet weather and cool temperatures during March and April. In late April, there was a break in the weather and cotton growers began aggressively planting to make up for the delay of nearly a month. The weather

remained warm, and rain returned when plants were small, allowing the late-planted crop to catch up. A prolonged heat wave arrived during July and took a toll on what originally looked to be an extremely good cotton crop. The weather during harvest was exceptional and helped stimulate extra growth. The price of Upland cotton was \$.57 per pound, down 5 percent from 2005, but 11 percent higher than 2004. Planted acreage showed a significant decrease of 34 percent. The production decline caused the total value of Upland cotton to drop to \$214 million from \$309 million in 2005 and \$443 million in 2004. California growers planted 275,000 acres of American Pima cotton, up 45,000 from 2005. The American Pima cotton price decreased 16 percent to \$1.04 per pound, generating \$343 million.

Rice is one of the major field crops in California with 526,000 acres planted in 2006. Medium grain rice contributed about 90 percent of the total rice production and acreage. Rain during late March and early April delayed planting in many areas, causing rice planting to continue into mid-June. A total of 460,000 acres of medium grain rice were successfully planted. Along with a 4 percent boost in yield,

medium grain rice production rose 3 percent to 36.1 million cwt. All rice grain value of production increased 18 percent for 2006 totaling \$465 million.

California's 2006 sorghum for grain had the largest increase in value of production at 69 percent, totaling \$6.83 million. The harvested acreage remained the same, at 10,000 acres, when compared to 2005, but the total production increased

17 percent to 29,400 tons. Growers began ground preparations and herbicide applications in mid-January in advance of planting the spring sorghum crop, but were frequently interrupted by a series of wet storms that plagued the state through the spring. Planting was delayed by the weather with some fields planted in mid-March and some planted as late as June. The earlier planted fields progressed well with warm temperatures in May. Growers continued their practice of frequent irrigation due to the heat wave in July. Chopping of sorghum for silage began around mid-September with harvest continuing through to November.

Wheat production took a heavy hit in 2006 from the stripe rust infestation affecting nearly 60 percent of the crop. A total of 520,000 acres were planted and 315,000 were harvested for grain. Both numbers are the lowest in the past 10 years. Overall, production declined 22 percent and value dropped 26 percent. Winter wheat declined in acreage, yield and total production value, which was down 22 percent from 2005. Durum wheat production was down 2 percent to 193,050 tons. Even though the acreage and production were down for Durum wheat, the price per ton increased 6 percent to \$141.67, resulting in a 4 percent increase in total production value when compared to 2005.

Notable Increases in Value:

Cottonseed.....	13%
Potatoes, Fall	15%
Potatoes, Sweet.....	29%
Rice, All.....	18%
Sorghum for Grain	69%

Significant Decreases in Value:

Cotton, Upland	31%
Potatoes, Winter.....	16%
Wheat, All.....	15%
Wheat, Winter	22%

	2005	570,000	369,000	2.29	844,650	124.67	104,458
2006	520,000	315,000	1.99	628,050	141.03	88,571	

- ¹ Area planted includes preceding fall.
- ² Production is on a clean basis.
- ³ Missing data have not been published due to the estimate being discontinued, not estimated, or not available.
- ⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.
- ⁵ Planted acreage is for all purposes.
- ⁶ Production ginned and to be ginned. Cotton bales are 480 lbs. net-weight.
- ⁷ Estimates began in 2005.
- ⁸ All alfalfa forage production is the sum of alfalfa harvested as dry hay and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.
- ⁹ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.
- ¹⁰ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1997-2006.
- ¹¹ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.
- ¹² Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.
- ¹³ Sweet rice acreage has been included since the 2003 crop year, but not previous years.
- ¹⁴ Excludes wild rice.
- ¹⁵ Estimates began in 2000.
- ¹⁶ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and Southern California.

Floriculture

California continued to lead the nation with floriculture crops valued at \$1.02 billion, nearly identical to the 2005 value. Overall for the United States, the value of floriculture sales dropped 3 percent to \$3.8 billion for 2006.

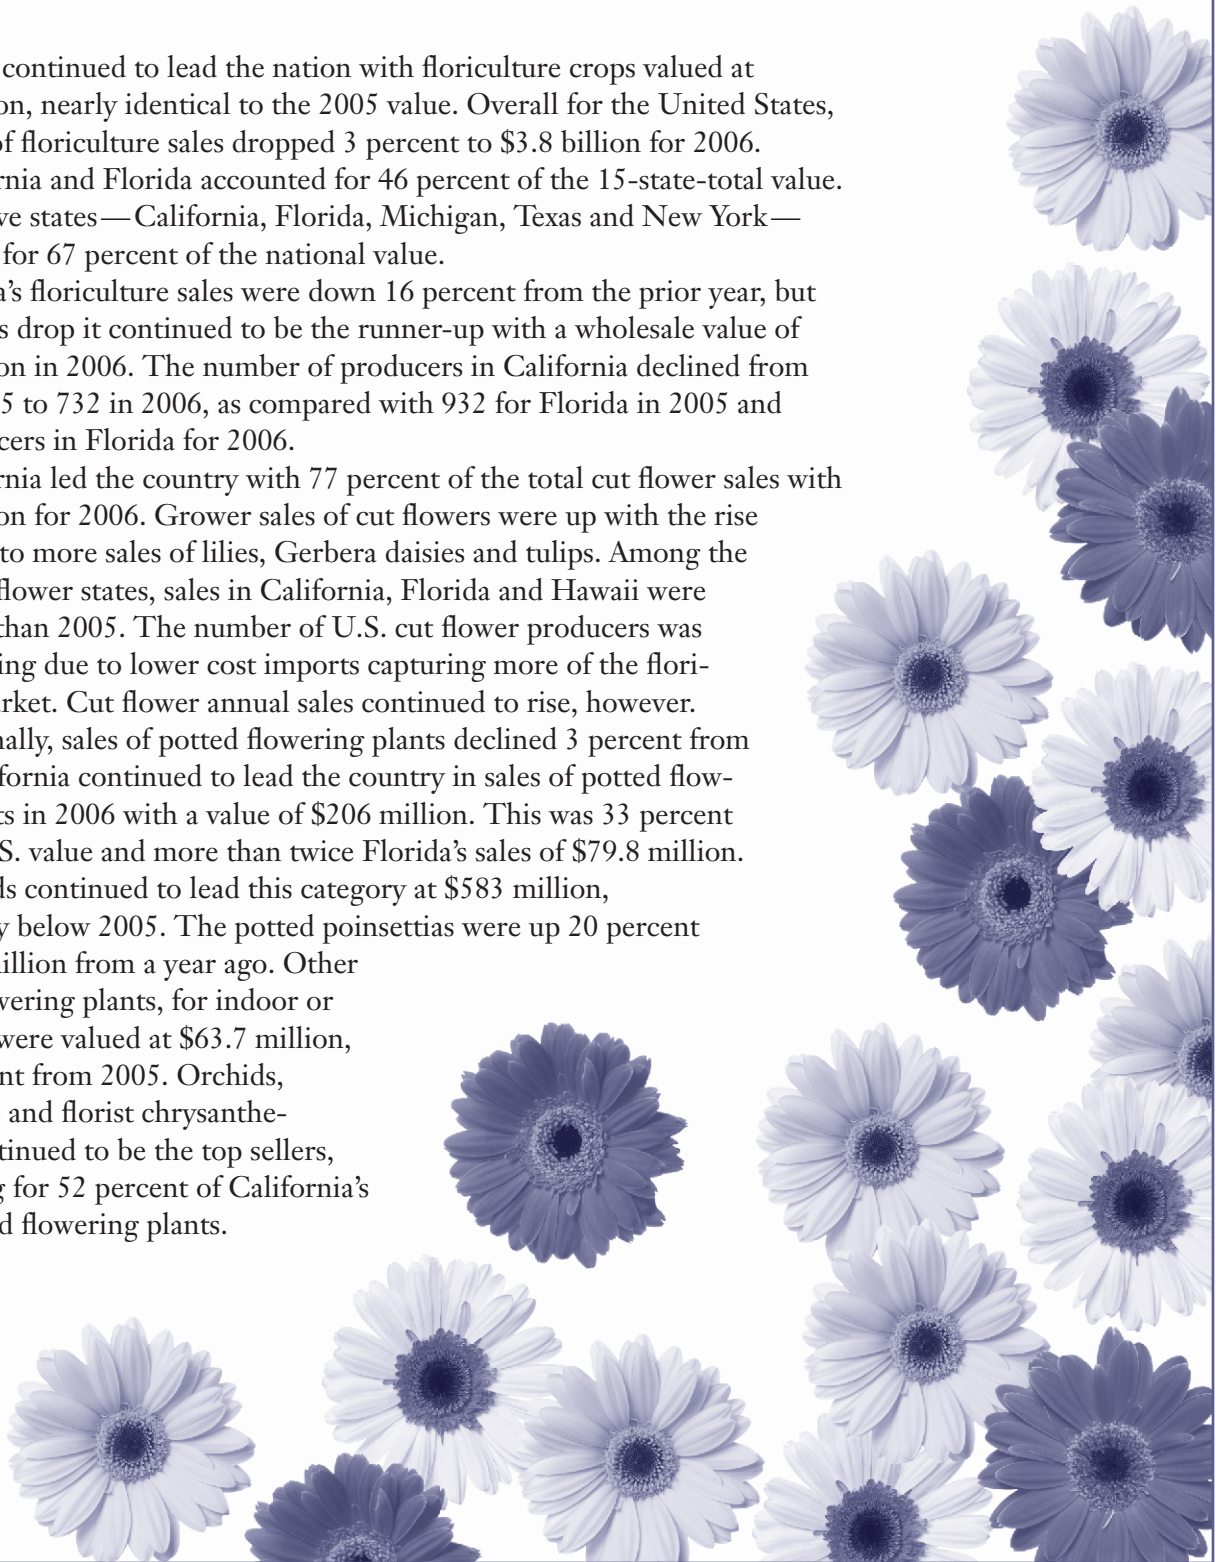

California and Florida accounted for 46 percent of the 15-state-total value. The top five states—California, Florida, Michigan, Texas and New York—accounted for 67 percent of the national value.

Florida's floriculture sales were down 16 percent from the prior year, but despite this drop it continued to be the runner-up with a wholesale value of \$800 million in 2006. The number of producers in California declined from 822 in 2005 to 732 in 2006, as compared with 932 for Florida in 2005 and 832 producers in Florida for 2006.

California led the country with 77 percent of the total cut flower sales with \$316 million for 2006. Grower sales of cut flowers were up with the rise attributed to more sales of lilies, Gerbera daisies and tulips. Among the major cut flower states, sales in California, Florida and Hawaii were all higher than 2005. The number of U.S. cut flower producers was still declining due to lower cost imports capturing more of the floriculture market. Cut flower annual sales continued to rise, however.

Nationally, sales of potted flowering plants declined 3 percent from 2005. California continued to lead the country in sales of potted flowering plants in 2006 with a value of \$206 million. This was 33 percent of total U.S. value and more than twice Florida's sales of \$79.8 million.

Orchids continued to lead this category at \$583 million, fractionally below 2005. The potted poinsettias were up 20 percent to \$36.2 million from a year ago. Other potted flowering plants, for indoor or patio use, were valued at \$63.7 million, up 4 percent from 2005. Orchids, poinsettias and florist chrysanthemums continued to be the top sellers, accounting for 52 percent of California's total potted flowering plants.

¹ The total covered growing area of 117,351,000 square feet consisted of the following: 22,362,000 square feet of shade and temporary cover; 11,884,000 square feet of glass; 30,915,000 square feet of fiberglass and other rigid greenhouses; 52,190,000 square feet of film plastic (single/multi) greenhouses; and 7,559 acres of open ground.

² For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

³ Included in state totals to avoid disclosure of individual operations.

⁴ Pot price is a weighted average of all pots to avoid disclosure of individual operations.

⁵ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

Fruit and Nut Crops

California accounts for 46 percent of the U.S. fruit and nut production and 63 percent of the national value of fruit and nut crops. In 2006, the state produced 13.8 million tons of fruit and nuts, 10 percent less than 2005. The main reason for the decline was a smaller grape crop. The 2006 harvest of 5.77 million tons was 17 percent smaller than the huge 2005 grape crop. The state's total production value of all fruits and nuts in 2006 was \$10.4 billion, down 4 percent from 2005.

Grapes continue to be the top-valued fruit and nut crop at \$3.03 billion, decreasing 5 percent from the previous year. Crops with record production in 2006 were almonds, avocados, blueberries, Navel oranges, raspberries, strawberries and tangerines. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins and walnuts.

Significant Increases in Production:

Almonds	22%
Avocados	99%
Boysenberries.....	30%
Pears, All.....	18%
Pears, Bartlett	20%
Plums, Dried.....	86%
Tangerines.....	24%

Notable Decreases in Production:

Apricots.....	48%
Kiwifruit.....	30%
Olives	83%
Oranges, Valencia	32%
Peaches, Clingstone.....	26%

The year began with a significant amount of rainfall, but February brought dry and mild conditions. March produced wet and cool weather patterns, which continued through April. The weather provided conditions for diseases; therefore, orchards were being treated with fungicides to prevent blossom rot. Strawberry harvesting began in central California in early May and continued until rain hampered harvest during the last part of the month. In June, weather was a little cooler than normal, which did not have any impact on fruit harvest.

The remainder of the summer was hot and dry, with temperatures reaching the 100s in many parts of the state. Almond hull split had begun in some areas, and hull split spraying was underway. Almond, raisin grape, wine grape and pomegranate harvesting began, while stone fruit, lemon and grapefruit harvesting continued.

Photo by Ed Williams / Yuba County

The fall initiated warm and dry conditions that lasted throughout the month of October. The year ended as a vigorous cold front passed through Northern California, bringing heavy rains to the north coast. The cold front brought significant snowfall to the northern and southern mountain ranges and to the Sierra Nevada.

According to the USDA's Economic Research Service, the per capita nut consumption in the U.S. for 2005-2006 fell 22 percent to 2.7 pounds per person (shelled basis), the lowest since 2000-2001. Americans consumed smaller amounts of almonds, walnuts, pistachio nuts, macadamia nuts, hazelnuts and other nuts (mostly imports such as cashews, Brazil nuts and pine nuts). Only pecan consumption increased due to larger supplies from the on-cycle of the trees' alternate-bearing nature and near-record imports.

Americans consumed more non-citrus fruit products in 2005-2006, increasing 2 percent to 179.4 pounds per person, but all citrus consumption declined 7 percent in 2005-2006 to 99.7 pounds per person. Orange consumption increased during 2005 by 6 percent. Banana consumption declined for the third consecutive year, dropping to 25.1 pounds per person in 2005-2006, down 2 percent from 2004. Apple consumption declined 10 percent between 2004 and 2005, to 16.9 pounds per person.

¹ Non-bearing shown only in year when acreage surveys were conducted.

² Return at processing plant door or packinghouse door.

³ Acres of raisin-type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1997-2000 – zero; 2001 – 41,000; 2002 – 27,000; 2003-2006 – zero. These acres were deducted from bearing acres before calculating yield.

⁴ Raisin-type production is the fresh equivalent of dried and not dried.

⁵ Acreage by county, variety and year of planting for 2006 are available upon request.

⁶ These crops are almond hulls, apricot-plum crosses (aprium, plumcot, pluots), chayotes, cherimoyas, chestnuts, citrus by-products, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, macadamia nuts, persimmons, pomegranates, prickly pears, quince, orchard biomass and black walnuts.

¹ Data for 1999 not published to avoid possible disclosure. Processed price excludes dried, but processed value includes dried.

² Total processed includes canned, frozen, juice and brined.

³ Prices for processing and fresh totals were not published to avoid possible disclosure. Small quantities processed included in fresh to avoid possible disclosure.

⁴ Includes substandard raisins diverted to other uses.

⁵ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

⁶ Small quantities of processed fruit are included in fresh to avoid possible disclosure.

⁷ Quantity and value include dried, but price excludes dried.

⁸ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure. Data for 2006 not published to avoid possible disclosure.

⁹ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

¹ Non-bearing shown only in year when acreage survey conducted.

² Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value: 1997 – 15.0 million pounds; 1998 – 21.0 million pounds; 1999 – 33.3 million pounds; 2000 – 15.9 million pounds; 2001 – 16.8 million pounds; 2002 – 8.3 million pounds; 2003 – 20.8 million pounds; 2004 – 14.5 million pounds; 2005 – 16.1 million pounds; 2006 – 23.9 million pounds.

³ Data for 2006 acreage by county, variety and year of planting available upon request.

Grape Crush

The Final Grape Crush Report includes all grape tonnage crushed during the 2006 season. Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the administrative code.

Summary of Grape Tonnages and Prices

The 2006 crush totaled 3,488,871 tons, down 19 percent from the record 2005 crush of 4,330,064 tons. Red wine varieties accounted for the largest share of all grapes crushed at 1,873,775 tons, down 16 percent from 2005. The 2006 white wine variety crush totaled 1,262,542 tons, down 17 percent from 2005. Tons crushed of raisin-type varieties totaled 267,021, down 43 percent from 2005. Tons crushed of table-type varieties totaled 85,533, down 19 percent from 2005.

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining tonnage, each processor was required to report the estimated equivalent tons of grapes crushed for concentrate. For the 2006 season, this total was 463,203 tons, approximately 13 percent of the 2006 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type or variety.

California grape growers received prices in 2006 for raisin grapes and white wine grapes that were, on average, below the 2005 prices. Prices received for table grapes and red wine grapes were, on average, above the 2005 prices. The 2006 average price of all varieties was \$548.33 per ton, up 3 percent from 2005.

Average Price per Ton for the 2006 Crop¹:

Red wine grapes.....	\$636.62, up slightly
White wine grapes.....	\$503.22, down 1 percent
Raisin grapes.....	\$153.79, down 6 percent
Table grapes.....	\$137.27, up 13 percent

¹ These price levels have not been adjusted for inflation.

Leading Grape Varieties and Districts

In 2006, Chardonnay accounted for the largest percentage of crush volume with 15.8 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 12.1 percent of the total crush. The next eight highest percentages of grapes crushed were all wine varieties, with the exception of Thompson Seedless.

Grapes produced in District 4 (Napa County) received the highest average price of \$3,046.13 per ton, up 2 percent from 2005. District 3 (Sonoma and Marin counties) received the second highest return of \$1,990.66 per ton, up 6 percent from 2005.

The 2006 Chardonnay price of \$752.01 per ton was up 5 percent from 2005, while the 2006 Cabernet Sauvignon price of \$955.14 per ton was up 2 percent from 2005. The 2006 average price for Zinfandel was \$507.96 per ton, up 8 percent from 2005, while the Merlot average price was down 9 percent from 2005 at \$664.06 per ton.

Burger – Monbadon	Meunier – Pinot Meunier	Ruby Seedless – King Ruby
Chardonnay – Pinot Chardonnay, Chardonnay Musque	Moscato Gaillo – Muscat Yellow	Sangiovese – Sangiovetto, Brunello
Cinsaut – Black Malvoisie, Black Malvasia	Muscat Blanc – Muscat Canelli,	Sauvignon Vert – Muscadelle
Crimson Seedless – Red Crimson	Muscat Blanc A Petits Grains	St. Emillion – Ugni Blanc, Trebbiano
Emerald Seedless – Black Seedless	Muscat Hamburg – Black Muscat	Syrah – French Syrah, Shiraz, Syrah Noir
Flame Seedless – Red Flame	Negrette – Pinot St. George	Tempranillo – Tinta Roriz, Valdepenas
Gamay (Napa) – Gamay, Valdiguie	Nero D'Avola – Calabrese	Touriga Nacional – Touriga
Gray Riesling – Trousseau Gris	Palomino – Golden Chasselas	Trousseau – Bastardo
Grenache – Grenache Noir	Pinot Gris – Pinot Grigio	White Riesling – Johannisberg Riesling, Riesling
Italia – Muscat Italia	Princess – Melissa	
Malaga – White Malaga	Red Globe – Rose Ito	

Livestock and Dairy

California's total cash receipts from livestock and livestock products were \$7.61 billion in 2006, down 10 percent from 2005. This decline was enough to bump the state's national ranking from second to fourth in livestock cash receipts. Milk, cattle and chickens remain the state's leading commodities, and cash receipts declined for all three.

The Golden State's dairy industry showed mixed results in 2006. Increased milk production, milk per cow and a higher number of cows outpaced the demand for dairy products. This contributed to lower milk prices for dairy producers. The dairy sector in California continued to change in 2006 with dairies relocating within California, to other states, or shutting down. There was a net loss of 68 dairies in the state during the year.

California has been the nation's leading dairy state since 1993 when it surpassed Wisconsin in milk production. Sales of milk and cream contributed \$4.49 billion in 2006. Wisconsin, New York, Idaho and Pennsylvania were the next leading states. California ranks No. 1 in the U.S. in the production of fluid milk, butter, ice cream and nonfat dry milk. California ranks No. 2 in cheese production.

The inclination of low milk prices slowly started to turn around toward year-end. The extreme temperatures that hit central California in July and August of 2006 also played an important role in milk prices and production. Many dairy producers felt long-term effects from the heat wave that affected cow reproductive cycles and lowered calf birth rates.

Photo by Ed Williams / Kings County

California's dairies produced 38.8 billion pounds of milk, accounting for 21 percent of the nation's milk supply. For the first time, all 12 months of 2006 recorded more than 3 billion pounds in milk production. Approximately 48 percent of all the state's milk was used to make cheese.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 35 counties contributed to the state's market milk production. The top five milk-producing counties in California were Tulare (26 percent), Merced (14 percent), Stanislaus (10 percent), Kings (9 percent) and Kern (9 percent). These counties accounted for 68.4 percent of the state's total milk production in 2006. Sales of fluid milk in California averaged 36 percent whole milk, 34 percent reduced fat milk, 14 percent low fat milk and 16 percent skim milk.

Milk production per cow increased 2 percent in California to 21,815 pounds and the number

of dairy cows in the state rose to 1.78 million head. California cheese production has more than doubled in the past decade, from 1.05 billion pounds in 1996 to 2.21 billion pounds in 2006. The steady increase in milk production throughout 2006 caused the U.S. to have more milk on the market than demand, resulting in continued acceptance of dairy product export bids. For 2006, export bids were accepted for cheese, 6,129 metric tons (13.5 million lbs.); anhydrous milk fat, 4,319 metric tons (9.50 million lbs.); butter, 5,864 metric tons (12.9 million lbs.); and whole milk powder, 1,758 metric tons (3.90 million lbs.).

Cash receipts for cattle and calves show decreasing receipts for 2006, but the previous six years had displayed an increasing trend. The 2006 sales totaled \$1.68 billion, compared with \$1.74 billion in 2005. Cattle and calves showed a

4 percent decrease, while receipts for hogs and pigs were 2 percent below the previous year. Sheep and lambs declined the most among meat animals at 17 percent below 2005.

California's 2006 honey production, at 19.8 million pounds, was 34 percent below 2005. Producing colonies totaled 380,000, down 5 percent from the previous year. The yield per colony averaged 52 pounds, compared to 75 pounds produced in 2005. However, the average price per pound was 98 cents, 14 cents higher than 2005.

¹ Preliminary 2006 data.

² Excludes processed cheese and cottage cheese.

³ Includes Cheddar, Colby, washed curd, stirred curd, Monterey and Jack.

⁴ Includes all cheeses not included in the above categories.

⁵ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

⁶ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon. Includes nonfat ice cream.

⁷ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink." Contains less than 10 percent milk-fat required for ice cream.

⁸ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

Vegetable and Melon Crops

California continued to be the leading fresh market vegetable producing state in 2006, accounting for 44 percent of the U.S. harvested area, 48 percent of production and 51 percent of value.

Total value of California's 2006 fresh and processing vegetable and melon production was \$6.83 billion, up from the 2005-revised total of \$6.45 billion. All lettuce remained the leading vegetable crop in value of production, at \$1.61 billion, followed by tomatoes with \$1.14 billion.

Carrots, tomatoes, Romaine lettuce, leaf lettuce and celery were among the crops showing increased values of production. Mushrooms, onions, spinach, garlic and artichokes were among crops experiencing declines in value.

According to the USDA Economics Research Service, per capita use of all vegetables (a category that includes melons, potatoes, sweet potatoes, pulse crops and mushrooms) fell 3 percent in the United States to 428 pounds in 2006. Among individual products, declining use was seen for head lettuce, spinach, celery, onions, pumpkins and tomatoes. These declines were partially offset by consumption increases for melons, processed potatoes, sweet potatoes, pulses and mushrooms.

California was also the leading processing vegetable producing state, with 25 percent of the U.S. harvested acreage, 65 percent of the production and 52 percent of the value.

Per capita consumption of U.S. processing vegetables decreased 7 percent to 117 pounds in 2006. Total consumption of freezing vegetables increased 3 percent to 6.5 billion pounds (22.3 billion including potatoes) in 2006.

Notable Increases in Production:

Cabbage, Fresh Market	30%
Cucumbers, Fresh Market.....	19%
Onions, Summer Storage	10%
Peppers, Chili	7%

Significant Decreases in Production:

Asparagus	22%
Beans, Fresh Market Snap.....	17%
Pumpkins	28%
Spinach, Processing	36%

January began with a sequence of dynamic Pacific storm systems, which brought heavy rain to Northern and Southern California. The abundance of rain caused flooding in some fields and delayed planting dates. Dry and unseasonably warm weather conditions persisted at the end of January, while February weather was variable. During March and April there were substantial amounts of precipitation. Spring vegetable plantings were a couple weeks late across the state due to the persistent rains.

High pressure across the state in early May led to sunny skies and very warm conditions. Hot and dry weather boosted vegetable crop growth. As the summer advanced, however, record-setting temperatures damaged crops. High-pressure systems continued through the first couple weeks of August. October began with normal temperatures. The end of the year brought moderate weather that promoted growth and development of vegetables.

Vegetable and Melon Acreage, Production and Value, 1997–2006

¹ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

² Estimates discontinued in 2002.

³ Estimates began in 2000 and discontinued in 2002.

⁴ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1997—278,000 cwt.; 1998 to 2006 — 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.

⁵ Estimates began in 2000.

⁶ Estimates began in 1998. Included in summer storage onions.

⁷ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.

⁸ Estimates began in 2002.

⁹ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.

¹ Prices are for fresh market vegetables at point of first sale.² Snap bean program began in 2003.³ Estimates discontinued in 2005.

California Agricultural Exports

The nearly \$9.8 billion in California agricultural exports in 2006 is a new record and represents a 5 percent increase from 2005.

The top 55 export commodities account for \$8.3 billion or 85 percent of total exports, while the remaining 15 percent were associated with other products and mixtures. Of the top 55 export commodities, 29 exhibited increases of more than 5 percent in export value from 2005, while 14 showed decreases and 12 showed little change.

The top 10 export commodities combined accounted for 70 percent of the export value of the top 55 agricultural export commodities and 60 percent of total agricultural exports. Exports of the top 10 commodities increased 1.3 percent from 2005. The top 10 export commodities in 2006 are almonds, wine, dairy and products, cotton, table grapes, walnuts, oranges, pistachios, processed tomatoes and strawberries. Strawberries joined the top 10 after a 17 percent increase in value from 2005, which dropped rice off this list. Generally there is little change in the rank of the top 10 commodities from year to year.

Almonds have been the top export commodity for several years. The export value of almonds increased 3 percent from 2005 to nearly \$1.9 billion. The increase is accounted for by increased export volume for almonds.

Wine export values increased 28 percent from 2005 to an all-time high of nearly \$736 million. The export price of wine increased 21 percent from 2005 and accounted for the majority of the increase in export value.

California exports agricultural products to more than 150 countries. Accurate export destination data are available for only 48 commodities. These 48 commodities account for 99 percent of the export value of the top 55 export commodities. The commodities whose export destinations are not included are apples, turkey, wheat, eggs, chicken, avocados and mushrooms.

The top 10 export destinations account for 85 percent of the 2006 export value of the 48 commodities. The top three destinations—European Union (EU-25), Canada and Japan—account for nearly 60 percent of the 48-commodity total.

The ratio of quantity exported to quantity produced decreased 2 percent in 2006. Even though the main market for California agricultural production is still the rest of the country, foreign markets have become relatively more important in recent years. In 1999, only 16 percent of the local production was shipped to overseas markets, whereas in 2006 this figure was 24 percent.

Methodology

California's agricultural export statistics are developed by the Agricultural Issues Center at UC Davis in consultation with the California Department of Food and Agriculture. Data to compute agricultural exports are derived from official government sources, published industry sources, and unpublished information from government and industry.

Export quantities and values for U.S. and California port districts are from the Department of Commerce trade data posted on the U.S.

International Trade Commission online database (<http://dataweb.usitc.gov/>). Canadian import (value) data are from Strategis, Canada's online database (<http://strategis.ic.gc.ca/engdoc/main.html>).

If the California export price is not available for a particular product, the Agricultural Issues Center uses the U.S. average export price for that commodity in order to provide a dollar value. Production quantities and values are from various USDA sources, such as the National Agricultural Statistics Service, Economic Research Service and Agricultural Marketing Service.

Agricultural Issues Center (AIC) export estimates differ from other sources, such as those of the USDA's Economic Research Service (ERS) on methodological issues. The ERS estimates are based on a state's share of production of the exported commodity. It is assumed that, for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use port data, without direct links to where the product originated. AIC export figures correspond to commodities produced within the state. Products originated in another state and exported via California ports are not included in these statistics.

In most cases the final AIC report presents the export data at the individual commodity level. For instance, exports of a given fruit in fresh, canned

and dried forms are added up and listed under the name of the fruit, although the estimation of fresh fruit exports may differ from the methodology used for canned and dried fruit.

The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA and United Nations Food & Agriculture Organization are applied.

For the 2006 report, the AIC followed the same methodology applied in 2005 and 2004. However, some of the previously published figures for 2005 and 2004 have been reviewed and adjusted, based on new information obtained from various sources.

The methodology for lemons and pears was changed slightly in 2005, and the new methodology was applied to 2004.

The AIC now calculates California's export of lemons by using the state's share of U.S. production of lemons multiplied by U.S. total exports obtained from the U.S. International Trade Commission.

For pears, AIC now uses a combination of Canadian import data of fresh pears from California, data from the U.S. International Trade Commission and California Pear Advisory Board.

Commodity Export Values and Rankings, 2005–2006				
Commodity	2006 Rank	2005	2006	Percent Change ¹

TOTAL 55 PRINCIPAL COMMODITIES		8,029,547	8,347,154	4
TOTAL OTHER PRODUCTS ^{2, 6, 7}		1,291,911	1,419,911	10
TOTAL ALL AGRICULTURAL EXPORTS		9,321,458	9,767,064	5

¹ Export values for each year are rounded. More precise numbers are used in the percent change calculations.

² 2005 figures were revised based on updated production data from USDA National Agricultural Statistics Service.

³ 2005 figures were revised based on updated Canadian import data.

⁴ 2005 and 2006 figures were revised based on updated production data from USDA National Agricultural Statistics Service.

⁵ "Hides and Skins" account for 46 percent of "Beef and Products" total value in 2006.

⁶ 2005 figures were revised based on updated port data from the U.S. Department of Commerce/International Trade Commission.

⁷ Other Products⁷ is composed of (a) highly processed products that are difficult to attribute to a specific commodity, such as mixtures of fruits, nuts and vegetables and other processed foods; and (b) animal and plant products marketed in such small quantities that they are not included in the top 55 leading commodities.

California Agricultural Exports

¹ "Beef and Products" include exports of hides and skins. Hides and skins account for 46 percent of "Beef and Products" total value in 2006.

² 2005 figures were revised based on updated production data from the USDA National Agricultural Statistics Service.

³ 2005 figures were revised based on updated Canadian import data.

⁴ 2005 and 2006 figures were revised based on updated production data from the USDA National Agricultural Statistics Service.

⁵ "Other Products" is composed of (a) highly processed products that are difficult to attribute to a specific commodity, such as mixtures of fruits, nuts and vegetables and other processed foods; and (b) animal and plant products marketed in such small quantities that they are not included in the top 55 leading commodities.

¹ The European Union (EU) member countries to which California exports are shipped reflect only the initial destination of the product, not the country of consumption. Many products are distributed throughout the EU after the initial entry.

² "Other Commodities" are those that individually account for 1 percent or less of all California agricultural exports to the EU.

³ Accurate export destination data is only available for 48 of the top 55 commodities. The commodities for which export destinations are not included are apples, turkey, wheat, eggs, chicken, avocados and mushrooms.

⁴ "Other EU Members" include Austria, Cyprus, Czech Republic, Estonia, Finland, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Slovak Republic and Slovenia. All these countries combined account for just over 5 percent of California agricultural exports to the EU.

NOTE: Totals may not equal due to rounding.

WEIGHTED AVERAGE ⁷				24

¹ Conversion factors from the U.S. Department of Agriculture, National Agricultural Statistics Service were used in these calculations.

² Ratios do not necessarily reflect share of the crop exported in a given year, because exports may include quantities produced in prior years and some of the current year's production may be exported in subsequent years.

³ The liveweight equivalent for "Beef and Products" is obtained by converting beef and offal provided in dressed weight units to liveweight units using a conversion factor of 1 pound dressed weight, which equals 1.49 pounds liveweight.

⁴ Farm quantity exported for "Dairy and Products" is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents, total solids basis.

⁵ There is no addition for the farm quantity of milk allotted to whey exports, because whey is a byproduct of cheese production. Other products, including casein, lactose, milk albumin, products for infant use, pudding and rennet, are converted to farm equivalent by multiplying California's share of U.S. milk production to the U.S. export quantity for these products, then applying a conversion factor of 1 pound of product to 8 pounds of milk equivalent. The same conversion factor is used for nonfat dry milk.

⁶ "Grapes, All" includes grape juice, raisins, table grapes and wine.

⁷ The weighted average is based on each commodity's share of production value. Values for chicken, mushrooms, and flowers and nursery products are not included because reliable data on export quantity are not available.

Source: University of California, Agricultural Issues Center.

Agricultural Export Country Profiles: 2002–2006 ¹

Country Profile: Canada

Canada represents the largest single export market for California and the United States. In 2006, California exported nearly \$1.9 billion in agricultural products to Canada, representing an estimated 19 percent of total agricultural exports. California's top five exports to the market (lettuce, strawberries, processed tomatoes, table grapes and wine) represent an estimated 46 percent of exports to the market. Total U.S. agricultural exports to Canada increased an estimated 10 percent over the previous year, while California exports increased roughly 7 percent.

Country Profile: Japan

Japan remains a significant export destination for California agricultural products, representing an estimated 9 percent of total agricultural exports. California exports to Japan have increased 6 percent since 2002, and the market is the largest export destination for five of California's top commodities. Japan is the third largest export destination for the United States and the second-largest-country market for California.

Country Profile: China/Hong Kong

California's agricultural exports to the China/Hong Kong market have increased an estimated 77 percent since 2002, making this market one of the fastest growing export destinations. Cotton is the leading commodity export to the market, representing 35 percent of total agricultural exports. China is the leading export destination for two of California's top commodities (cotton, beef and products) representing more than 25 percent of total exports for these commodities. China continues to be a strong market for California agriculture.

Country Profile: Mexico

California agricultural exports to Mexico have almost doubled since 2002, positioning Mexico as one of California's fastest growing markets. Dairy and products is the leading export to the market, representing an estimated 35 percent of total exports. In addition, Mexico represents an estimated 5 percent of total California agricultural exports and is the top export destination for both dairy and products and cottonseed byproducts. Mexico is the fifth largest export destination for California and the second largest destination for U.S. agricultural exports. California's agricultural exports to Mexico represent an estimated 5 percent of total U.S. agricultural exports to the market.

Country Profile: South Korea

South Korea is California's sixth largest export destination, representing less than 5 percent of the state's total agricultural exports. Citrus is the leading agricultural export to the nation, valued at \$63 million and representing an estimated 17 percent of total citrus exports. Exports to South Korea increased roughly 13 percent since 2002, after a rebound in export sales following the 2004 ban on U.S. beef exports. Prior to the South Korean ban on U.S. beef, California exported an estimated \$72 million to the market, the second largest destination for California beef exports in 2003.

Agricultural Export Country Profiles: 2002–2006 ¹ continued

Country Profile: Taiwan

California agricultural exports to Taiwan have increased an estimated 13 percent since 2002. The top five commodities represent an estimated 57 percent of the total export value to the market with cotton being the leading export. California's agricultural exports to Taiwan represent an estimated 10 percent of total U.S. agricultural exports to the market. Taiwan is the second largest export destination for California tree fruit (peaches, plums and nectarines) as well as celery.

Country Profile: India

India is a significant market for California almonds, the second largest export destination following the European Union-25. Total California agricultural exports to the market are valued at \$203 million with almonds representing an estimated 77 percent of total exports. Cotton and table grapes are the other leading commodities to the market. India ranks as the 33rd largest export destination for U.S. agricultural products. California represents an estimated 59 percent of total U.S. exports to the market.

Country Profile: Australia

California agricultural exports to Australia have more than doubled since 2002, and this is the first time Australia has been one of the top 10 export destinations. The top five commodities represent an estimated 65 percent of total exports to the market, with walnuts and table grapes being the top commodity exports. Australia is the 23rd largest export destination for U.S. agricultural products, and California represents an estimated 17 percent of total U.S. agricultural exports to the market.

Country Profile: United Arab Emirates

The United Arab Emirates is California's largest agricultural export destination in the Middle East valued at \$94 million. Exports to the market have more than doubled since 2002, following the growth pattern of California's top export commodity to the market. California almonds represent an estimated 87 percent of total export value to the market, with table grapes and walnuts accounting for the remaining balance. The United Arab Emirates accounts for less than 5 percent of total almond exports.

Country Profile: Malaysia

California agricultural exports to Malaysia have increased an estimated 36 percent since 2002. Table grapes are the leading export commodity, representing 48 percent of total agricultural exports. Malaysia is the fourth largest export destination for table grapes, representing an estimated 8 percent of total exports for the commodity. Malaysia is the 26th largest export destination for the U.S., and California's agricultural exports account for 17 percent of total exports to the market.

¹ This set of charts provides export values of total agricultural exports by destination. Only countries with consecutive five-year data (2002-2006) are represented. Accurate export destination data is only available for 48 of the top 55 commodities. The commodities for which export destinations are not included are apples, turkey, wheat, eggs, chicken, avocados and mushrooms.

YOUR FUTURE

The 2007 Census of Agriculture gives you the opportunity to shape your future. Your response provides vital information that influences decisions about community development, funding availability, farm policy and other critical issues. Your feedback in the Census helps create a brighter tomorrow.

Look for your Census form in the mail in early January 2008. Please complete and return it by February 4. Your participation ensures a better future for your operation, your family and your community.
