

Field Crops

California field crops experienced a 6 percent decline in total value of production from 2005 with a total at \$3.34 billion in 2006. While the value of production showed a decrease, California's acreage and production increased. The harvested acreage increased by 5 percent and production by 1 percent from 2005.

California is the leading state in alfalfa hay production and consumption. In 2006, California produced 7.14 million tons of alfalfa hay, generating \$828 million, the highest value among all field crops. Record rainfall in March and April delayed the start of the 2006 alfalfa hay season in California and reduced the availability of higher quality hay. The spring rains, along with record high temperatures in July, pushed alfalfa hay yields to the lowest point in eight years. Production dropped 1 percent from 2005, with a 13 percent decrease for production value. Other hay also showed a decline in yield and price, as values decreased 12 percent to \$175 million.

Cotton planting was delayed due to wet weather and cool temperatures during March and April. In late April, there was a break in the weather and cotton growers began aggressively planting to make up for the delay of nearly a month. The weather

remained warm, and rain returned when plants were small, allowing the late-planted crop to catch up. A prolonged heat wave arrived during July and took a toll on what originally looked to be an extremely good cotton crop. The weather during harvest was exceptional and helped stimulate extra growth. The price of Upland cotton was \$.57 per pound, down 5 percent from 2005, but 11 percent higher than 2004. Planted acreage showed a significant decrease of 34 percent. The production decline caused the total value of Upland cotton to drop to \$214 million from \$309 million in 2005 and \$443 million in 2004. California growers planted 275,000 acres of American Pima cotton, up 45,000 from 2005. The American Pima cotton price decreased 16 percent to \$1.04 per pound, generating \$343 million.

Rice is one of the major field crops in California with 526,000 acres planted in 2006. Medium grain rice contributed about 90 percent of the total rice production and acreage. Rain during late March and early April delayed planting in many areas, causing rice planting to continue into mid-June. A total of 460,000 acres of medium grain rice were successfully planted. Along with a 4 percent boost in yield,

medium grain rice production rose 3 percent to 36.1 million cwt. All rice grain value of production increased 18 percent for 2006 totaling \$465 million.

California's 2006 sorghum for grain had the largest increase in value of production at 69 percent, totaling \$6.83 million. The harvested acreage remained the same, at 10,000 acres, when compared to 2005, but the total production increased

17 percent to 29,400 tons. Growers began ground preparations and herbicide applications in mid-January in advance of planting the spring sorghum crop, but were frequently interrupted by a series of wet storms that plagued the state through the spring. Planting was delayed by the weather with some fields planted in mid-March and some planted as late as June. The earlier planted fields progressed well with warm temperatures in May. Growers continued their practice of frequent irrigation due to the heat wave in July. Chopping of sorghum for silage began around mid-September with harvest continuing through to November.

Wheat production took a heavy hit in 2006 from the stripe rust infestation affecting nearly 60 percent of the crop. A total of 520,000 acres were planted and 315,000 were harvested for grain. Both numbers are the lowest in the past 10 years. Overall, production declined 22 percent and value dropped 26 percent. Winter wheat declined in acreage, yield and total production value, which was down 22 percent from 2005. Durum wheat production was down 2 percent to 193,050 tons. Even though the acreage and production were down for Durum wheat, the price per ton increased 6 percent to \$141.67, resulting in a 4 percent increase in total production value when compared to 2005.

Notable Increases in Value:

Cottonseed.....	13%
Potatoes, Fall	15%
Potatoes, Sweet.....	29%
Rice, All.....	18%
Sorghum for Grain	69%

Significant Decreases in Value:

Cotton, Upland	31%
Potatoes, Winter.....	16%
Wheat, All.....	15%
Wheat, Winter	22%

	2005	570,000	369,000	2.29	844,650	124.67	104,458
2006	520,000	315,000	1.99	628,050	141.03	88,571	

- ¹ Area planted includes preceding fall.
- ² Production is on a clean basis.
- ³ Missing data have not been published due to the estimate being discontinued, not estimated, or not available.
- ⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.
- ⁵ Planted acreage is for all purposes.
- ⁶ Production ginned and to be ginned. Cotton bales are 480 lbs. net-weight.
- ⁷ Estimates began in 2005.
- ⁸ All alfalfa forage production is the sum of alfalfa harvested as dry hay and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.
- ⁹ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.
- ¹⁰ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1997-2006.
- ¹¹ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.
- ¹² Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.
- ¹³ Sweet rice acreage has been included since the 2003 crop year, but not previous years.
- ¹⁴ Excludes wild rice.
- ¹⁵ Estimates began in 2000.
- ¹⁶ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and Southern California.

Floriculture

California continued to lead the nation with floriculture crops valued at \$1.02 billion, nearly identical to the 2005 value. Overall for the United States, the value of floriculture sales dropped 3 percent to \$3.8 billion for 2006.

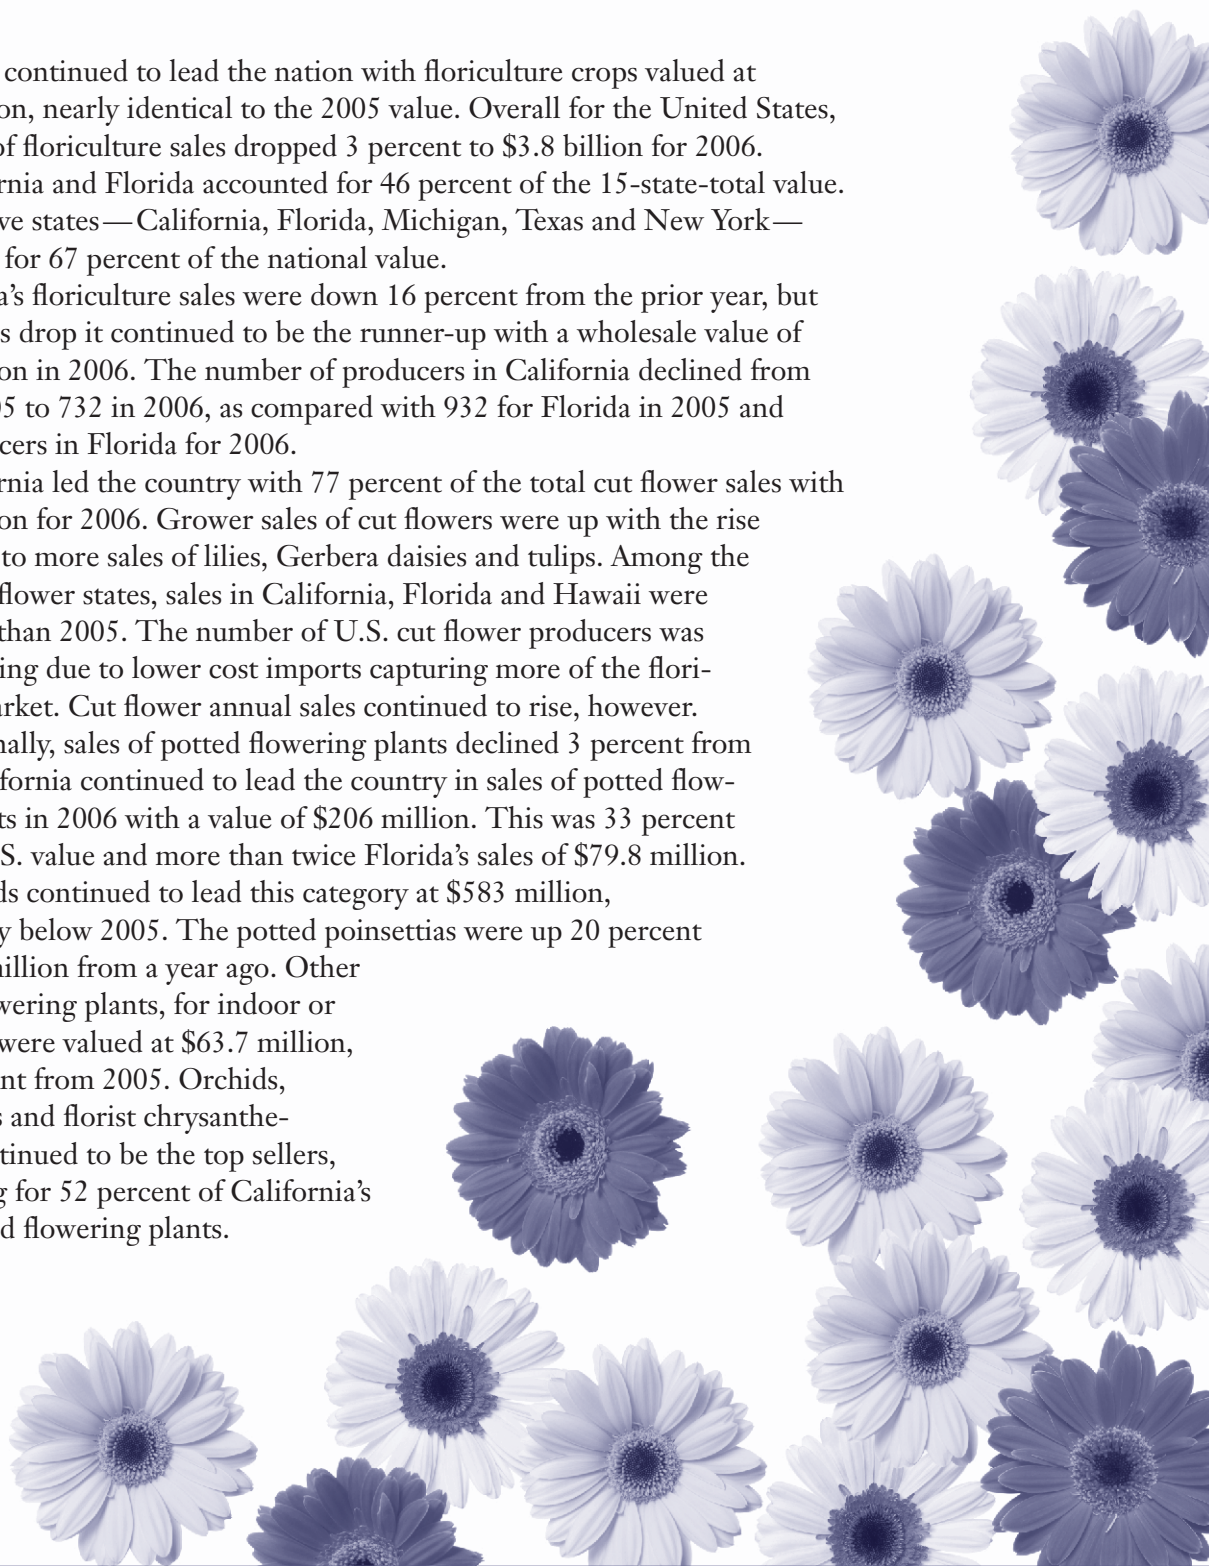

California and Florida accounted for 46 percent of the 15-state-total value. The top five states—California, Florida, Michigan, Texas and New York—accounted for 67 percent of the national value.

Florida's floriculture sales were down 16 percent from the prior year, but despite this drop it continued to be the runner-up with a wholesale value of \$800 million in 2006. The number of producers in California declined from 822 in 2005 to 732 in 2006, as compared with 932 for Florida in 2005 and 832 producers in Florida for 2006.

California led the country with 77 percent of the total cut flower sales with \$316 million for 2006. Grower sales of cut flowers were up with the rise attributed to more sales of lilies, Gerbera daisies and tulips. Among the major cut flower states, sales in California, Florida and Hawaii were all higher than 2005. The number of U.S. cut flower producers was still declining due to lower cost imports capturing more of the floriculture market. Cut flower annual sales continued to rise, however.

Nationally, sales of potted flowering plants declined 3 percent from 2005. California continued to lead the country in sales of potted flowering plants in 2006 with a value of \$206 million. This was 33 percent of total U.S. value and more than twice Florida's sales of \$79.8 million.

Orchids continued to lead this category at \$583 million, fractionally below 2005. The potted poinsettias were up 20 percent to \$36.2 million from a year ago. Other potted flowering plants, for indoor or patio use, were valued at \$63.7 million, up 4 percent from 2005. Orchids, poinsettias and florist chrysanthemums continued to be the top sellers, accounting for 52 percent of California's total potted flowering plants.
