

Fruit and Nut Crops

California accounts for 46 percent of the U.S. fruit and nut production and 62 percent of the national value of fruit and nut crops. In 2009, the state produced 14.2 million tons of fruit and nuts, 5 percent less than 2008. Grape production totaled 6.54 million tons for 2009, a slight decrease from the 2008 grape crop. The state’s total production value of all fruits and nuts in 2009 was \$11.8 billion, up 6 percent from 2008.

Grapes continue to be the top-valued fruit and nut crop at \$3.27 billion, up 12 percent from the previous year. The California grape crop accounts for 90 percent of the 2009 United States utilized grape production. Crops with record production in 2009 were blueberries, raspberries, strawberries, pistachios and walnuts. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins and walnuts.

Notable Increases in Production:

Blueberries.....	73%
Lemons	42%
Plums, Dried.....	29%
Pistachios.....	28%
Grapes, Wine	23%

Notable Decreases in Production:

Avocados.....	47%
Olives.	31%
Plums	30%
Nectarines.....	29%
Oranges, Valencia	29%

According to the USDA’s Economic Research Service, in 2009 California was the No. 1 exporter of agricultural commodities in the United States. Tree nuts were the No. 1 agricultural export for California, followed by fruit.

The United States is among the top producers and consumers of fruit and tree nuts in the world. Each year, fruit and tree nut production generates about 13 percent of the United States farm cash receipts for all agricultural crops. Over one-tenth of United States fruit and tree nut production is destined for the export market, while imports make-up over one-third of domestic fruit and tree nut consumption. The typical American consumes around 280 pounds of fruit and tree nuts (fresh and processed products) each year. Oranges, apples, grapes and bananas are the most popular fruit while almonds, pecans and walnuts are the most preferred tree nuts.

The nation’s largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage, Florida more than 10 percent, and Washington around 6 percent.

U.S. tree nut production since the mid-2000s generated, on average, nearly \$4 billion in annual farm cash receipts, with almonds, walnuts, pistachios and pecans accounting for most of the sales. Almost 90 percent of the U.S. tree nut production is harvested from Golden State orchards annually.

¹ Non-bearing shown only in year when acreage surveys were conducted.

² Return at processing plant door or packinghouse door.

³ Acres of raisin-type grapes enrolled in the California Raisin Industry Diversion (RID) program were: 1998–2000—zero; 2001—41,000; 2002—27,000; 2003–2007—zero. These acres were deducted from bearing acres before calculating yield.

⁴ Production is the fresh equivalent of dried and not dried.

⁵ Acreage by county, variety and year of planting for 2007 are available upon request.

⁶ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products and orchard biomass.

¹ Missing data not published to avoid possible disclosure of individual operations.

² Total processed includes canned, frozen, juice and brined.

³ Small quantities processed included in fresh to avoid possible disclosure.

⁴ Includes substandard raisins diverted to other uses.

⁵ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

⁶ Quantity and value include dried, but price excludes dried.

⁷ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure. Data for 2006 and 2007 not published to avoid possible disclosure.

⁸ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

³ Data for 2009 is preliminary.

Grape Crush

Grape Crush Report Overview

The Final Grape Crush Report includes all grape tonnage crushed during the 2009 season. Changes in tonnage, Brix and prices from the preliminary report were due to late reports and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the administrative code.

Summary of Grape Tonnages and Prices

The 2009 crush totaled 4,095,297 tons, up 11 percent from the 2008 crush of 3,673,858 tons. This is only the second time that California's crush has exceeded 4 million tons. Red wine varieties accounted for the largest share of all grapes crushed, at 2,078,121 tons, up 24 percent from 2008. The 2009 white wine variety crush totaled 1,624,910 tons, up 21 percent from 2008. Tons crushed of raisin-type varieties totaled 307,360, down 38 percent from 2008, and tons crushed of table-type varieties totaled 84,906, down 49 percent from 2008.

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2009 season, this total was 499,323 tons, approximately 12 percent of the 2009 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type or variety.

The 2009 average price of all varieties was \$574.46, up 5 percent from 2008. Average prices for the 2009 crop by type were as follows: red wine grapes, \$670.54, up 1 percent from 2008; white wine grapes, \$535.55, down 1 percent from 2008; raisin grapes, \$171.02, down 24 percent; and table grapes, \$143.10, down 21 percent. These price levels have not been adjusted for inflation. The large increase in higher priced wine grapes crushed, coupled with the decline in less expensive raisin and table grape varieties crushed, results in the average price increase from 2008.

BACTERIAL BLIGHT OF GRAPE

Xylophilus ampelinus

Readily transmitted by pruning tools and cuttings, this pathogen can lead to serious harvest losses.

Leading Grape Varieties and Districts

In 2009, Chardonnay accounted for the largest percentage of the total crush volume with 17.8 percent. Zinfandel accounted for the second leading percentage of crush with 10.9 percent of the total crush. The next eight highest percentages of grapes crushed were all wine varieties.

District 13, (Madera, Fresno, Alpine, Mono, Inyo counties; and Kings and Tulare counties north of Nevada Avenue (Avenue 192)), had the largest share of the state's crush, at 1,344,514 tons. The average price per ton in district 13 was \$247.86.

Grapes produced in District 4 (Napa County) received the highest average price of \$3,414.58 per ton, down less than 1 percent from 2008. District 3 (Sonoma and Marin counties) received the second highest return of \$2,186.61, down 2 percent from 2008. The 2008 Chardonnay price of \$757.82 was down 7 percent from 2008, and the Cabernet Sauvignon price of \$1,078.09 was down 3 percent from 2008. The 2009 average price for Zinfandel was \$464.00, up less than 1 percent from 2008, while the Merlot average price was down 4 percent from 2008 at \$625.64 per ton.
