

Agricultural Overview

California agriculture saw a decrease in the sales value of its products in 2008, but still received its second highest value on record. The state's 81,500 farms and ranches received \$36.2 billion for their output in 2008, down from last year's record high of \$36.4 billion.

California remained the nations' leading dairy state, despite ending the year with prices recorded below the cost of production. Dairy producers received \$6.92 billion for their milk production during the year, down from \$7.34 billion in 2007. The state's dairy farms increased production by only 1.3 percent, lower than the five year average of 3.1 percent. The Golden State continued to produce 22 percent of the milk in the U.S., and ranked number one in the production of fluid milk, butter, ice cream, and nonfat dry milk.

California remained the number one state in cash farm receipts in 2008, with its \$36.2 billion in revenue representing 11.2 percent of the U.S. total. The state accounted for 14 percent of national receipts for crops, and 7.5 percent of the U.S. revenue for livestock and livestock products.

California's agricultural abundance includes more than 400 commodities. The state produces nearly half of U.S.-grown fruits, nuts, and vegetables. Across the nation, U.S. consumers regularly purchase several crops produced solely in California.

Top 5 Agricultural States in Cash Receipts, 2008

State	Rank	Total Value
		<i>Billion Dollars</i>
California	1	36.2
Iowa	2	24.8
Texas	3	19.2
Nebraska	4	17.3
Illinois	5	16.4

Notable Increases in California Cash Receipts:

Corn for Grain	161%
Eggs	27%
Garlic	47%
Honey	83%
Oranges, Navel	30%
Plums, Dried	55%
Pumpkins	21%
Tangerines	91%
Winter Wheat.....	88%
Wool & Mohair	33%

Notable Decreases in California Cash Receipts:

Aquaculture	23%
Asparagus	27%
Boysenberries	55%
Olives.....	50%
Raspberries	31%
Winter Potatoes	18%

California is the sole producer (99 percent or more) of the commodities in bold.

Farm Facts

In 2008, 81,500 farms operated in California, less than 4 percent of the national total. Almost 30% of California farms produced commodity sales totaling over \$100,000, compared to 16% for the U.S. as a whole. During 2008, California lands devoted to farming and ranching totaled 25.4 million acres, the same as the final number reported for 2007. The average farm size decreased in California, but remained the same for the U.S. as a whole. California farm size decreased from 314 acres to 312 acres, while the U.S. average remained steady at 418 acres.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$29.6 billion in value for 2008. Eleven commodities exceeded \$1.00 billion in value for 2008. Despite higher production costs for many growers, twelve of the 20 commodities registered an increase in value from the previous year. The same was not true for California's leading commodity, Milk and Cream, which decreased by \$412 million in value, due to weak demand

early in the year and diminished market price. Final grower returns could change the sales value for hay, berries and other commodities, resulting in an updated dollar amount in next year's report.

Leading Counties

California is home to the most productive agricultural counties in the nation. According to the 2007 Census of Agriculture's ranking of market value of agricultural products sold, nine of the Nation's top 10 producing counties are in California.

California's County Agricultural Commissioner reports showed a 2.9 percent increase in the value of their agricultural production for 2008. Fourteen counties reported a value of production in excess of \$1.13 billion. Fresno continued as the leading county with an agricultural production value of \$5.67 billion, an increase of 6.1 percent from the 2007 value. Tulare County was second in value of production with \$5.02 billion, up 3 percent from 2007. Kern showed a decrease of 1.4 percent to \$4.03 billion, though it remained the number three county.

Weather Highlights for 2008

January began with an upper level high moving out of California, opening a storm door. A cold air mass moved through California and spread heavy rain through much of the State. The storm brought strong southerly winds with maximum wind gusts of 70 mph in the Central Valley. The remainder of the month saw typical rainfall for the time of year, which aided the growth of field crops.

Alternating stormy and fair weather stretches characterized much of February. Below and above normal temperatures accompanied the shifting weather patterns. The storms throughout the month built up considerable snowpack in the Sierra Nevada Mountains. The State experienced unseasonably warm temperature during the end of the month, with high temperatures reaching the 80's in the south and upper 70's in the Central Valley.

High pressure systems dominated March, with most parts of California experiencing only scattered showers during the month. High temperatures in southern California reached the 80's with lows in the 40's, while the highs in the Central Valley reached the 70's with lows in the 30's. March saw the first cutting of Alfalfa. Early planted summer vegetable fields were growing well.

The start of April saw below normal temperatures. Damage from the cold temperatures was reported for grapes and other non-citrus fruit. Temperatures quickly warmed, and by the second week, with several record high temperatures broken. The rest of the month was arid with no significant rainfall reported. Rice field preparation and planting was underway. The harvest of barley, oats, and wheat started.

May started off with alternating high and low pressure systems moving over California. The month was highlighted by two unusual weather occurrences. The first was a very strong high pressure ridge that was accompanied by a thermal trough, that developed much further westward than normal. This led to many high temperatures being broken Statewide. The second was an upper level low that passed through California into the Great Basin late in May. The low did an unusual reversal, moving back over the State. Measurable rainfall was reported across the Central Valley and the coast, with snowfall in the higher elevations of Northern California.

Transitory low pressure systems characterized the State's weather for the first half of June. These systems mainly effected temperatures and winds, with very little precipitation associated with the systems. During the third week of the month, a low pressure system built over California. This resulted in widespread thunderstorms activity across northern California. The thunderstorms produced a great amount of lightning, but little rainfall. This combination resulted in over 600 wildfires ignited across the State.

July saw its typical summertime pattern settle over the State. Seasonably warm temperatures and dry weather were featured throughout almost all of the month. Southern California did experience a few cases of rainfall that originated from subtropical moisture, though rains were brief. Smoke and haze from wildfires lingered over the Central Valley. Extremely poor grazing conditions persisted. The harvest of wheat was completed by late July. The almond harvest began.

During the month of August, California experienced seasonably warm temperatures and dry weather. Very little precipitation was experienced over the majority of the State. Cotton fields were in bloom with bolls being set. Rice continued to grow nicely through the month. Pasture conditions continued to deteriorate throughout California. Milk production continued its decline as a result of the summer heat.

The beginning of September saw the continuation of warm summer temperatures with little moisture. As the autumn season approached, September saw its usual drop in temperatures. Dry conditions were experienced, except for some isolated thunderstorms in Northern California. Grape growers continued their harvest, and cattle producers continued to contend with poor feed and water conditions.

October began with a significant storm system developing in the eastern Pacific Ocean. As this storm system began to influence the State's weather, much needed rain finally reached California. Measurable rain was reported in every region of the State. The remainder of the month was characterized by the usual continued decline in temperatures, but only small amounts of precipitation were received. Harvesting of cotton began, while the cooler temperatures boosted production of milk.

During November, the overall weather pattern changed to more fall-like. The early part of the month saw a series of weather systems move across California, bringing significant rainfall amounts to the northern part of the State. The last half of the month there was little significant rainfall. While pasture and rangeland conditions improved slightly, more precipitation was needed to facilitate needed improvement.

Temperatures during the start of December were above normal, except in the northern Central Valley where fog during daytime hours kept temperatures from increasing. During the later part of the month, a series of systems moved across California, bringing much needed rain and snow. Pasture and range conditions showed improvement due to the wet conditions.

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

Field Crops

California field crops experienced an increase in total value of production to a record high in 2008, with the total at \$5.01 billion, up 18 percent from 2007. California's acreage and production both increased. The harvested acreage rose by 6 percent while production was up by 4 percent from 2007.

California continued to be the leading state in alfalfa hay production and consumption. In 2008, California produced 7.21 million tons of alfalfa hay, generating \$1.47 billion, the highest value among all field crops. Other hay also showed an increase in production and price; values were up 42 percent to \$326 million.

It was an excellent season for cotton growers. Planting of the 2008 California cotton crop began in early March in the Imperial Valley and continued throughout the State until early May. In late March, the Imperial Valley crop was challenged by the region's unusually cool weather and high winds. Some late Upland cotton beds in the State were disced without planting due to low cotton prices; approximately 3,000 acres of planted fields were plowed under in the Central Valley due to the tight water supplies. Good weather conditions dominated during the growing and harvest seasons; no major pest problems were reported. Harvest was complete by early December. Growers produced good quality cotton with above average yields. Price of Upland cotton was \$0.59 per pound, down 18 percent from 2007, but 2 percent higher than 2006. Planted acreage showed a significant decrease for the fourth year in a row, dropping by 38 percent from 2007. The total value of Upland cotton also decreased, plummeting down to \$105 million from \$225 million in 2007, a drop of 53 percent. The value was \$218 million in 2006. California growers planted 155,000 acres of American Pima cotton, down 105,000 from 2007. The American Pima cotton price increased slightly from the previous year to \$0.992 per pound. Despite the increase in price, total value declined; American Pima cotton generated \$192 million in 2008, compared to \$377 million in 2007.

Rice was one of the major field crops in California with 519,000 acres planted in 2008. Medium grain rice contributed about 91 percent of the total rice production and 89 percent of the total acreage. A lack of rain during March allowed rice growers to get an early start on their field preparations for the 2008 crop. Growers began planting rice during the middle of April, and were mostly finished planting by the end of May. Weather conditions were ideal during the early stages of growth. As of the middle of June, most of the rice fields in California had emerged and were showing steady growth. Rice fields were in various stages of heading during August. Weed

pressure was a concern for many producers. Harvest began during September and was nearly complete as of the end of October. All rice grain value of production increased 67 percent for 2008 totaling \$1.18 billion. California's 2008 corn for grain value of production increased 7 percent to \$158 million. The harvested acreage was down 11 percent to 170,000 acres, when compared to 2007, and the total production dropped 4 percent to 928,200 cwt.

Only about 60 percent of the California winter wheat crop was harvested for grain. Many dairy farmers growing wheat opted to harvest the wheat as hay or silage due to the high cost for alfalfa hay. Due to a dry wheat growing season, the stripe rust fungus was not a major concern for most wheat growers. Wheat was planted on 840,000 acres and 545,000 were harvested for grain. Overall, production increased 67 percent and value jumped 121 percent. Winter wheat increased in acreage, yield, production and total value, which was up 108 percent when compared to 2007. Durum wheat production was up 90 percent to 456,750 tons. Durum wheat price per ton increased 34 percent to \$251.00 resulting in an enormous 155 percent increase in total production value when compared to 2007.

Notable Increases in Value:

Safflower	174%
Wheat, Durum	155%
Wheat, winter	108%
Barley	75%
Rice, all.....	67%
Potatoes, sweet	64%

Notable Decreases in Value:

Cotton, Upland	54%
Cotton, American Pima	49%
Cottonseed	48%

- 1/ Area planted includes preceding fall.
- 2/ Production is on a clean basis.
- 3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.
- 4/ Includes varieties not listed separately. Excludes beans grown for garden seed.
- 5/ Planted acreage is for all purposes.
- 6/ Production ginned. Cotton bales are 480 lbs. net-weight.
- 7/ Estimates began in 2005.
- 8/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.
- 9/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.
- 10/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.
- 11/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.
- 12/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.
- 13/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.
- 14/ Excludes wild rice.
- 15/ Estimates began in 2000.
- 16/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

Floriculture

The 2008 wholesale value of floriculture crops, produced by all operations in the 15-State Commercial Floriculture Survey having \$10,000 or more in sales, decreased 2 percent from the revised 2007 valuation, to \$4.22 billion. California continued to lead the nation with floriculture crops valued at \$1.02 billion wholesale, down 2 percent from the revised 2007 total. Florida, the next largest producer, was down 5 percent from the prior year, with \$922 million in wholesale value for 2008. The number of producers in California declined from a revised 874 in 2007 to 820 in 2008. In Florida, the number of producers increased just slightly, from a revised 869 in 2007 to 871 in 2008. California and Florida together accounted for 46 percent of the 15-State total wholesale value of floriculture crops. The top five states (California, Florida, Michigan, Texas, and North Carolina) accounted for 66 percent of the 15-State total wholesale value.

California, the dominant State in cut flower production, accounted for 78 percent of the total cut flower wholesale value among surveyed operations with \$100,000 or more in total sales. The \$314 million in value for 2008 was down over 4 percent from the revised 2007 valuation of \$328 million. Total wholesale value of nearly all California-grown cut flower varieties surveyed decreased for 2008, including values for Gerbera Daisies and lilies, as well as a substantial decrease in cut rose total wholesale value. Total cut flower wholesale value decreased nearly 3 percent for the second-largest Washington State, from a revised \$23.8 million in 2007 to \$23.1 million in 2008. More substantial declines in cut flower wholesale value were reported in Hawaii and Florida, while a nearly 5 percent increase in New Jersey, to \$13.3 million for 2008, propelled this State to the third-largest ranking in the preliminary 2008 findings. The total wholesale value of cut flower crops in the 15-State program decreased over 5 percent, from a revised \$425 million for 2007 to \$403 million for 2008. The number of cut flower producers in the 15-State program declined over 4 percent, from 382 in 2007 to 365 for 2007.

California-grown annual bedding and garden plants accounted for over 16 percent of the value recorded for this grouping, continuing to lead the highest-valued crop category in the 15-State program. Wholesale value of California-grown bedding and garden plants, produced by all operations with \$100,000 or more in total sales, increased nearly 6 percent, from a revised \$203 million in 2007 to approximately \$214 million for 2008. Wholesale value of Michigan crops, the second largest, decreased nearly 4 percent to \$187 million. Third-largest Texas reported a 3 percent increase in wholesale value, to \$160 million. The total wholesale value of annual bedding and garden plant crops in the 15-State program increased over 1 percent, to \$1.31 billion. The number of annual bedding and garden plant producers in the 15-State program declined nearly 6 percent, from 1,854 in 2007 to 1,749 for 2008.

California also continued to lead the country in potted flowering plant value of production for 2008, with a total value of \$238 million wholesale produced by all operations with \$100,000 or more in total sales, a very slight decline from the revised 2007 valuation. California accounted for 34 percent of the 15-State total wholesale value reported. Florida, the second largest producer, accounted for 21 percent of the 15-State total, with \$147 million wholesale. Potted orchid production continued to lead this category in California, with crops valued at \$62.7 million, up nearly 2 percent from the revised 2007 wholesale value. Production of potted orchids, potted poinsettias, and potted florist chrysanthemums together accounted for over 43 percent of the wholesale value of California-grown potted flowering plants. The total wholesale value of potted flowering plant crops in the 15-State program declined just a fraction of a percent from the revised 2007 valuation, to \$698 million. The number of potted flowering plant producers in the 15-State program decreased nearly 7 percent, from a revised 1,331 in 2007 to 1,241 for 2008.

Fruit and Nut Crops

California accounts for 46 percent of the U.S. fruit and nut production and 61 percent of the national value of fruit and nut crops. In 2008, the state produced 14.9 million tons of fruit and nuts, 7 percent more than 2007. Grape production totaled 6.55 million tons for 2008, which was 5 percent larger than the 2007 grape crop. The state's total production value of all fruits and nuts in 2008 was \$11.2 billion, up slightly from 2007.

Grapes continue to be the top-valued fruit and nut crop at \$2.94 billion, decreasing 4 percent from the previous year. Crops with record production in 2008 were almonds, tangerines, walnuts, sweet cherries, and strawberries. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

Notable Increases in California Production:

Tangerines	91%
Plums, dried	55%
Oranges, Valencia	48%
Oranges, Navel	30%
Avocados	25%

Notable Decreases in California Production:

Boysenberries	55%
Olives	50%
Raspberries	31%
Lemons	20%

According to the USDA's Economic Research Service, the typical American consumes around 280 pounds of fruit and tree nuts (fresh and processed) each year. Per capita consumption of fruits and tree nuts is the third largest among the major food groups, after dairy products and vegetables. Production is harvested from less than 2 percent of the total harvested cropland in the U.S., but generates on average over \$15 billion in U.S. farm cash receipts annually. Small, family, or individually run farm operations continue to dominate U.S. fruit and tree nut production. Most of the production and revenue, however, come from the largest farms.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for about half of the harvested fruit acreage, Florida almost one-fourth, and Washington around one-tenth. California's production accounts for more than half of the value of all fresh fruits. Oranges, grapes, apples, bananas and grapefruit were the top five fruits consumed in the U.S. during the 2000s.

U.S. tree nut production since the mid-2000s generated, on average, nearly \$4 billion in annual farm cash receipts, with almonds, walnuts, pistachios and pecans accounting for most of the sales. California is the nation's number one producer of tree nuts. Almost 90 percent of the U.S. tree nut production is harvested from Golden State orchards annually. The top three nuts consumed in the U.S. are almonds, walnuts and pecans.

1/ Non-bearing shown only in year when acreage surveys were conducted.

2/ Return at processing plant door or packinghouse door.

3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1998-2000 – zero; 2001 – 41,000; 2002 – 27,000; 2003-2007 – zero. These acres were deducted from bearing acres before calculating yield.

4/ Production is the fresh equivalent of dried and not dried.

5/ Acreage by county, variety and year of planting for 2007 are available upon request.

6/ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

1/ Non-bearing shown only in year when acreage survey conducted.

2/ Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value:

1999 – 33.3 million pounds, 2000 – 15.9 million pounds, 2001 – 16.8 million pounds, 2002 – 8.30 million pounds, 2003 -- 20.8 million pounds, 2004 – 14.5 million pounds, 2005 – 16.1 million pounds, 2006 – 23.5 million pounds, 2007 – 17.5 million pounds, 2008 -- 14.0 million pounds..

3/ Data for 2008 acreage by county, variety and year of planting available upon request.

Livestock and Dairy

California's total livestock and livestock products cash receipts were \$10.6 billion in 2008, down almost 2 percent from 2007. California continued to rank second nationally, accounting for 7.5 percent of livestock cash receipts. Milk, cattle, and chickens remain the state's leading commodities despite cash receipts declining for milk and aquaculture from 2007.

The Golden State's dairy industry faced production and financial challenges in 2008. The year started with continued growth in milk production. The month of March recorded the highest single month of production at 3.64 billion pounds. Fluid milk product demand was flat forcing plants to convert the increasing supply into butter and powder as well as shipping some out of state for processing. Inadequate plant capacity forced plants and producers to scramble to find homes for the excess production. Reducing milk supply became the focus of the dairy industry with cooperatives and other processors initiating production base caps. The last half of the year had a net decrease in milk production when compared to the same period of 2007. The average percent growth in production for the prior five years was 3.1 percent, while the 2008 percent growth was only 1.3 percent due to the production reduction efforts in the latter part of 2008. Record setting high feed and energy costs were mitigated for the first three quarters as the average prices paid to producers were close to the record setting prices of 2007. By the end of 2008 the prices received had dropped to below cost of production. In 2008 the average prices paid to producers decreased 6 percent. Dairies continued to relocate to other state or shut down completely with a net loss of 99 California dairies in 2008.

California has been the nation's leading dairy state since 1993 when it surpassed Wisconsin in milk production. Sales of milk and cream contributed \$6.92 billion in 2008. Wisconsin, New York, Idaho, and Pennsylvania were the next leading states in total milk production. California ranked number one in the U.S. in the production of fluid milk, butter, ice cream, and nonfat dry milk. California was second in total cheese production.

California's dairies produced 41.2 billion pounds of milk, accounting for 22 percent of the nation's milk supply. For the second year in a row, all 12 months of 2008 recorded more than 3.1 billion pounds in milk production. Approximately 43 percent of all the Golden State's milk was used to make cheese, down 4 percent from 2007.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 35 counties contributed to the state's market milk production. The top five milk-producing counties in California were Tulare (26 percent), Merced (14 percent), Stanislaus (10 percent), Kings (10 percent), and Kern (9 percent). These counties accounted for 69.5 percent of the state's total milk production in 2008. Sales of fluid milk in California

averaged 33 percent whole milk, 36 percent reduced fat milk, 15 percent low fat milk, and 16 percent skim milk.

Milk production per cow decreased 0.4 percent in California to 22,344 pounds and the number of dairy cows in the state rose to 1.84 million head. California cheese production has nearly doubled in the past three decades, from 1.17 billion pounds in 1976 to 2.11 billion pounds in 2008. California's total cheese production was down over 7 percent from 2007. United States cheese exports increased 32 percent from 2007, to 131 thousand metric tons per the USDA Foreign Agricultural Service. Butter exports also increased by 256 percent in 2008. Strong demand and a weak dollar coupled with competitive pricing contributed to the surge in US dairy product exports.

Cash receipts for cattle and calves increased 2 percent from 2007, to continue the previous seven year upward trend, excluding the 2006 dip. The 2008 sales totaled \$1.82 billion, compared with \$1.78 billion in 2007. Receipts for hogs and pigs were nearly 5 percent above the previous year. Sheep and lambs declined 13 percent from 2007 continuing the recent trend.

California's 2008 honey production, at 18.4 million pounds, was 35 percent above 2007. Producing colonies totaled 360 thousand, up 6 percent from the previous year. The yield per colony averaged 51 pounds, compared to 40 pounds produced in 2007. The average price per pound was 141 cents per pound, 37 cents higher than 2007.

**California Livestock, Dairy,
Poultry, and Apiary Cash Income**

Other Poultry	75,266	68,300	-9
Total	10,818,548	10,632,246	-2

In November 2008 California voters passed Proposition 2, requiring livestock operations to implement new space requirements for cages that hold calves raised for veal, egg-laying hens and pregnant pigs. Producers have begun to respond by decreasing breeding hogs and egg-laying hens to accommodate the enclosure restrictions, although full compliance is not mandated until January 1, 2015.

1/ Steers and heifers over 500 pounds (including fed cattle) and slaughter cows.

2/ Steers and heifers (all qualities) over 500 pounds (including fed cattle).

3/ Beef cows and cull dairy cows sold for slaughter.

4/ Steers and heifers (all qualities) under 500 pounds

Grazing Fee Annual Average Rates, 1999-2008 1/

Year	Per Animal Unit 2/	Cow-Calf	Per Head
	<i>Dollars Per Month</i>		
1999	12.10	15.00	12.50
2000	12.30	15.50	12.70
2001	13.00	16.00	13.50
2002	12.80	16.50	14.00
2003	13.50	17.50	14.30
2004	14.50	19.50	15.50
2005	15.40	20.50	17.00
2006	16.50	21.00	17.00
2007	16.50	21.50	17.30
2008	17.80	22.10	18.50

1/ The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833).

2,008										

1/ An operation is any place having one or more head of milk cows, excluding cows used to nurse calves, on hand at any time during the year.

Percent of inventory reflect average distributions of various surveys conducted during the year.

2/ Data will only be published during the Census of Agriculture which is every five years.

1/ Preliminary 2008 data.

2/ Excludes processed cheese and cottage cheese.

3/ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

4/ Includes all cheeses not included in the above categories.

5/ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

6/ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

7/ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink."

Contains less than 10 percent milk-fat required for ice cream.

8/ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

1/ Includes one or more counties within a district that normally have less than 500 head of milk cows.

Vegetable and Melon Crops

California continued to lead the fresh vegetable market in 2008, accounting for 44 percent of the U.S. harvested area, 49 percent of the national production, and 50 percent of the total value, for the 24 selected crops estimated.

Artichokes, as well as broccoli, garlic, leaf lettuce, watermelon, mushrooms, summer storage onions, processing onions, bell peppers, chili peppers, pumpkins, fresh market and processing spinach, and fresh market tomatoes were among the crops showing increased production in 2008. A decline in production values included the following crops: asparagus, fresh market snap beans and cabbage, fresh market and processing carrots, cauliflower, fresh market sweet corn, cucumbers, head and romaine lettuce, honeydew melons, spring onions, summer non-storage onions, squash and processing tomatoes.

California was also the leading processing vegetable producing state in 2008, with 25 percent of the U.S. harvested acreage, 69 percent of the national production and 51 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2008 fresh and processing vegetable and melon production was \$7.49 billion, up from 2007's revised total of \$7.39 billion. All lettuce remained the leading vegetable crop in value of production, at \$1.58 billion, followed by tomatoes with \$1.32 billion.

California's cash receipts for vegetables ranked number one in the nation and accounted for 36.8 percent of the U.S. total. Valued at \$7.52 billion, vegetables represented 20.8 percent of the state's total cash receipts in 2008.

According to the USDA Economic Research Service, per capita use of all vegetables, melons, potatoes, sweet potatoes, pulse crops and mushrooms in the United States increased 3.2 percent from 434 pounds in 2007 to 420 pounds in 2008. Fresh market consumption increased for broccoli, bell peppers, cabbage, cucumbers, eggplant, garlic and watermelon. Declining utilization was observed for cauliflower, onions, tomatoes, snap beans, head lettuce, Romaine Lettuce, cantaloupe and honeydew melons.

Per capita consumption of U.S. processing vegetables decreased 2.5 percent from 118 pounds in 2007 to 115 pounds in 2008. Processing vegetables whose consumption increased during 2008 included spinach, canning beets, chili peppers, and dehydrating onions. Consumption declined for canning snap beans, freezing sweet corn, cucumbers for pickles, and processing tomatoes.

Notable Increases in Production:

Pumpkins	21%
Onions, Processing	14%
Spinach, Processing	13%
Artichokes.....	8%
Onions, Summer Storage.....	8%

Notable Decreases in Production:

Asparagus	27%
Lettuce, Romaine.....	18%
Carrots, Processing	16%
Fresh Market Snap Beans	15%
Fresh Market Sweet Corn	11%

- 1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.
- 2/ Includes both fresh marketing and processing vegetables.
- 3/ Estimates discontinued in 2002.
- 4/ Estimates began in 2000 and discontinued in 2002.
- 5/ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1998 to 2007 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.
- 6/ Estimates began in 2000.
- 7/ Included in summer storage onions.
- 8/ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.
- 9/ Estimates began in 2002.
- 10/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.
