Tom Vilsack, Secretary

National Agricultural Statistics Service
Dr. Cynthia Z. Clark, Administrator
Vic Tolomeo, California Statistician

The California Statistics 2011 Annual is a joint effort of the California Department of Food and Agriculture (CDFA) and the United States Department of Agriculture (USDA). Like the previous 66 issues, it contains a summary of statistical data that was originally published by CDFA and USDA, primarily in the Dairy Information Bulletin. This publication would not be possible without the cooperation of the individuals and firms engaged in the production, manufacture, and distribution of milk and dairy products. Both corrections of errors and revisions based on receipt of more complete information are the basis of all changes from previously published data.

Historical timeline of the California dairy industry

California's Dairy Industry in 2011

For California, 2011 was a year of very mild weather and the highest year on record for commercial milk production. Milk producers experienced higher prices which helped with margins on the dairy, and feed availability continued to play a role in the cost to produce milk. For dairy processors, both national and global supply and demand conditions of finished dairy products were strong with national exports setting a record in terms of volume and total value. However, the end of the year showed increased global competition which may play a role in 2012 prices.

Throughout 2011, there continued to be signs of strength and improvement in the economy. Milk prices improved substantially in 2011, with the average price paid to producers rising to \$18.52, up nearly \$4 per hundredweight above the 2010 average price. Total

bulk milk production in California was up 2.7 percent from 2010, the total number of cows was down 1.2 percent, milk per cow was up 4.2 percent, and the number of dairies decreased 2.8 percent.

Milk Production

For all 12 months of 2011, California milk production recorded net increases compared to the same months in 2010. The year finished at a positive 2.7 percent (+1.07 billion pounds) compared to milk production totals for 2010. The five leading milk producing counties recorded 71.1 percent of the milk production in 2011: Tulare, Merced, Kings, Stanislaus, and Kern counties. Grade B milk production in 2011 recorded a decrease of 66.5 percent (-1.4 billion pounds)

compared to 2010. Milk production per cow in 2011 was estimated at 22,625 pounds and the number of cows in the state decreased

slightly to 1.84 million cows.

Utilization

Utilization in 2011 followed last year's pattern with butter and nonfat dry milk powder utilization remaining relatively the same, at 35.0 percent (compared to 34.8 percent in 2010) while the percentage of the milk supply going into cheese production (Class 4b) increased to 43.0 percent in 2011 (from 41.0 percent in 2010). For 2011, compared to 2010, California nonfat dry milk production decreased 11.7 percent, other dry milk products increased 138.0 percent, and butter production increased 11.7 percent. Mozzarella production, which accounts for more than half of total California cheese production, was responsible for a significant amount of the increase in Class 4b utilization. Of the top three cheeses: Mozzarella increased 3.8 percent, Cheddar fell 4.4 percent, and Monterey Jack showed a slight decrease of 0.8 percent. The utilization of pooled milk into Class 1 (fluid

Milk Production by County, 2011 (Percent of California Total Production)

milk) products continued its downward trend, falling to 13.5 percent (down from 15.0 percent in 2010). Class 1 sales continued to decline, recording a decrease of 1.6 percent compared to 2010. Reduced fat milk and half-and-half recorded increased sales in 2011, while whole, low-fat, and skim milks all showed decreases in sales.

Milk Prices

The 12-month average price paid to California producers in 2011 was \$18.52 per hundredweight,

compared to \$14.70 per hundredweight in 2010. Prices peaked in June at \$20.31 per hundredweight, but ended the year at \$17.38. The end of 2011 found increased milk production, growing inventories of dairy products, and decreasing prices paid to producers. New Zealand and Australia resumed normal to higher milk production levels after setbacks caused last year by drought (New Zealand) and floods (Australia).

Government Assistance and Related Issues

MILC:

The federal Milk Income Loss Contract (MILC) program never came into play for producers in 2011, as Class I prices (Boston) remained above the required levels to initiate payments; this compared to MILC payments to producers for one month in 2010 and 10 months in 2009.

CDFA HEARINGS:

The Department held a public hearing on June 30 and July 1, 2011 to consider amendments to the Stabilization and Marketing Plans for Market Milk for the Northern California and Southern California Marketing Areas. The petitioners and alternative proposals proposed changes to the butter and nonfat dry milk manufacturing cost allowances and the butter f.o.b. price adjuster in the Class 4a pricing formula; and proposed changes to the manufacturing cost allowance and f.o.b. price adjuster for cheese and the whey portion of the Class 4b pricing formula.

CDFA HEARINGS (Continued)

After carefully weighing the contents of the hearing record, the Department amended the Class 4a and 4b pricing formulas as follows:

- Implemented the Department's administrative changes to the Class 4a and 4b formulas by including language to implement the collection of security charges provided by the Milk Producer Security Trust Fund as found in Code Section 62561.
- Increased the f.o.b. California Price Adjuster for Grade AA butter from \$0.0309 per pound to \$0.0485 per pound.
- Increased the manufacturing cost allowance for Grade AA butter from \$0.1560 to \$0.1635.
- Increased the manufacturing cost allowance for nonfat dry milk from \$0.1698 to \$0.1763.
- Replaced the \$0.25/cwt. fixed whey factor with a sliding scale with five cent steps that floors whey values at \$0.25/cwt. and caps whey values at \$0.65/cwt.,

Whey Factor Sliding Scale

DMN Monthly Average Dry Whey Price (\$/lb)	Whey Factor in 4b Formula (\$/cwt.)
< 0.25	0.25
≥ 0.25 and < 0.30	0.30
≥ 0.30 and < 0.35	0.35
≥ 0.35 and < 0.40	0.40
≥ 0.40 and < 0.45	0.45
≥ 0.45 and < 0.50	0.50
≥ 0.50 and < 0.55	0.55
≥ 0.55 and < 0.60	0.60
≥ 0.60	0.65

using the Dairy Market News (DMN) Dry Whey-West Mostly commodity price series.

There continues to be a number of proposals at the national level to reform the dairy industry, addressing ways to target the increasing volatility in milk prices and farm income, including issues such as: margin protection, supply management, and revisions of current pricing formulas. Efforts in dairy industry reform and drafting of the next Farm Bill continue into 2012.

California's Commercial Milk Production

California total milk production increased 2.7 percent in 2011 to 41.4 billion pounds. The majority of the milk, 98.3 percent, was market grade (Grade A), with the remaining 1.7 percent manufacturing grade (Grade B). A portion of the manufacturing grade milk was produced by traditionally market grade dairies that, for pricing or regulatory reasons, made the decision to operate as manufacturing grade facilities.

The 26 milk-producing counties of the northern California region accounted for 93 percent of the market milk and 96 percent of the manufacturing milk produced commercially during 2011.

The five leading counties in total milk production for 2011, in ranking order, were: Tulare (27 percent), Merced (14 percent); Kings (11 percent); Stanislaus (10 percent); and Kern (10 percent). These five counties accounted for 71 percent of California's total milk production.

The chart above represents the production of milk, in millions of pounds per day, on a monthly basis, January 2007 through December 2011.

The five leading counties in manufacturing milk production, in ranking order, were: Merced (49 percent); Stanislaus (10 percent); San Joaquin (10 percent); Humboldt (6 percent); and Tulare (6 percent). These

five counties accounted for 82 percent of California's total manufacturing milk production.

Grade A Milk Production: Top 10 Counties

County (by rank)	Pounds of Milk Produced in 2011	% Change from 2010
Tulare	11,129,712,308	1.73%
Merced	5,558,179,588	11.06%

Pooled Milk Utilization

In 2011, utilization of pooled Grade A milkfat pounds increased 9.4 percent and solids-not-fat (SNF) pounds increased 7.6 percent, as compared to 2010. In addition, as compared to 2010, the breakdown of the utilization of the milk pounds for the following classes of milk on a total solids basis were as follows: Class 1, fluid dairy products (decreased 2.7 percent); Class 2, soft dairy products (decreased 1.6 percent); Class 3, frozen dairy products (decreased 1.0 percent); Class 4a, butter and powder (increased 8.6 percent); and Class 4b, cheese (increased 13.8 percent). In total, Class 4a and 4b accounted for 78 percent of all milk available on a total solids basis.

California Class 1 Sales

For 2011, total Class 1 sales decreased 1.6 percent compared to 2010, with reduced fat and half-and-half recording increased sales. Whole, lowfat, and skim milk sales showed a decrease, compared to 2010 figures.

The breakdown of total Class 1 Sales were as follows: 29 percent whole, 39 percent reduced fat, 14 percent lowfat, 15 percent skim and 2.5 percent half-and-half.

*All sales can include Class 1 products made from non-pool milk.

California and Federal Milk Standards - The California Advantage

Milk Product	Calcium	Protein	Nonfat Solids
California Whole Milk	276 mg	7.9 g	8.70%
Federal Whole Milk	261 mg	7.5 g	8.25%
California Advantage	5%	5%	5%
California 2% Reduced Fat	317 mg	9.1 g	10%
Federal 2%	261 mg	7.5 g	8.25%
California Advantage	21%	21%	21%
California 1% Lowfat	348 mg	10 g	11%
Federal 1%	261 mg	7.5 g	8.25%
California Advantage	33%	33%	33%
California Nonfat	285 mg	8.2 g	9%
Federal Nonfat	261 mg	7.5 g	8.25%
California Advantage	9%	9%	9%

Note: These numbers reflect the minimum standards for processing milk in California and at the national level. Some manufacturers may process their milk above these minimum standards.

^{1/} These totals do not include production of Skim Milk Powder (20-40% protein) and Skim Milk Powder Blends (previously referred to as Fat-Filled Powder, i.e. fortified with vitamins, minerals, or oils) as they do not meet the USDA definition of NFDM.

Manufacture of Dairy Products: Class 4b Production

Class 4b (Cheese and Whey Byproducts):

The year 2011 showed a 2.2 percent increase in total cheese production to 2.25 billion pounds. The shares of total cheese production were: Mozzarella at 58.1 percent (up 3.8 percent), Cheddar at 14.3 percent (down 4.4 percent), Monterey at 12.1 percent (down 0.8 percent), Hispanic at 5.0 percent (down 0.9 percent). Provolone and Parmesan cheeses accounted for 4.7 percent of total cheese production.
