## Agricultural Overview

The sales value generated by California agriculture increased by 4.6 percent between the 2012 and 2013 crop years. The State's 77,900 farms and ranches received \$46.4 billion for their output, up from the \$44.3 billion received in 2012. California's increase in revenue was led by the dairy industry followed by the almond and grape industries, respectively.

Almond cash receipts improved for the fourth consecutive year as revenue increased to \$5.77 billion. Cash receipts increased 19.8 percent due to increased production as well as a rise in prices from \$2.58 per pound of almonds in 2012 to \$3.21 per pound in 2013. Grape production generated \$5.59 billion in cash receipts in 2013, up 8 percent from last year's record high. Production increased by 13 percent from 2012, but prices received by growers decreased from \$756 per ton of grapes in 2012 to \$719 per ton in 2013. Revenue generated from the cattle sector receded from last year's record high as cash receipts were \$3.05 billion for the year. Receipts decreased more than 4 percent from 2012 as production decreased 3 percent.

The dairy industry, California's leading commodity in cash receipts, generated \$7.62 billion for milk production in 2012, up 10 percent from 2012 but below the record year of 2011. Milk production decreased by more than 1 percent, but a rise in prices resulted in an overall increase in cash receipts for the crop year. Milk prices received by producers rose from \$16.52 per hundred pounds of milk sold in 2012 to \$18.48 in 2013. As the leading dairy producing state in the country, California produced nearly 21 percent of the nation's supply in 2013.

California remained the leading state in cash farm receipts in 2013 with combined commodities representing nearly 12 percent

of the U.S. total. California's leading crops remained fruits, nuts and vegetables. Over a third of the country's vegetables and two-thirds of the country's fruits and nuts were produced in California.

**Top 5 Agricultural States in Cash Receipts, 2013**

State	Rank	Total Value <i>Billion Dollars</i>
<b>California</b>	<b>1</b>	<b>46.4</b>
Iowa	2	31.2
Nebraska	3	23.6
Minnesota	4	22.3
Texas	5	21.6

### Notable Increases in California Value of Production:

Pecans .....	52%
Cabbage, Fresh Market .....	51%
Peppers, Bell .....	45%
Broccoli .....	34%
Almonds .....	33%
Melons, Honeydew .....	30%
Celery .....	30%
Corn, Fresh Market Sweet .....	28%
Peppers, Chili .....	27%
Potatoes, Fall .....	26%

### Notable Decreases in California Value of Production:

Oats .....	-46%
Cucumbers Fresh Market .....	-38%
Peppermint .....	-36%
Barley .....	-30%
Peaches, Freestone .....	-29%
Cottonseed .....	-23%
Plums .....	-22%
Dates .....	-19%
Wheat .....	-19%
Grapefruits .....	-18%

## Farm Facts

In 2013, 77,900 farms operated in California, which is unchanged from 2012 and 3.7 percent of the national total. More than 26 percent of California farms generated commodity sales over \$100,000, greater than the national average of 19 percent. The amount of land devoted to farming and ranching in California decreased slightly to 25.5 million acres in 2013 from 25.6 million acres in 2012. The average farm size decreased from 329 acres to 327, which is below the national average of 435 acres.

## Land Values/Cash Rents

The average value of California farm real estate increased slightly in 2013 to \$6,900 per acre. Irrigated cropland's value increased 2.6 percent to \$11,800 per acre and non-irrigated cropland increased slightly to \$3,400 per acre. The value of all cropland increased 4.9 percent to \$9,860. The value of pastureland decreased slightly from the 2012 level to \$2,650 per acre. The rental rate of irrigated cropland increased slightly to \$365 per acre, up from \$340 per acre in 2012. Non-irrigated rental rates decreased by 25 percent to \$30 per acre, down from \$40 per acre in 2012. Pastureland rental rates increased from 2012 rental rates, up to \$12 per acre in 2013 from \$11.50 in 2012.

### Crop and Livestock Commodities in which California Leads the Nation <sup>1/</sup>

<b>Almonds</b>	<b>Figs</b>	Melons, Cantaloupe	Pluots
Apricots	Flowers, Bulbs	Melons, Honeydew	<b>Pomegranates</b>
<b>Artichokes</b>	Flowers, Cut	Milk	Raspberries
Asparagus	Flowers, Potted Plants	Nectarines	<b>Rice, Sweet</b>
Avocados	Garlic	Nursery, Bedding Plants	Safflower
Beans, Dry Lima	<b>Grapes, Raisins</b>	Nursery Crops	Seed, Alfalfa
Beans, F.M. Snap	Grapes, Table	<b>Olives</b>	Seed, Bermuda Grass
Bedding/Garden Plants	Grapes, Wine	Onions, Dry	<b>Seed, Ladino Clover</b>
Broccoli	Greens, Mustard	Onions, Green	Seed, Vegetable and Flower
Brussels Sprouts	Hay, Alfalfa	Parsley	Spinach
Cabbage, Chinese	Herbs	<b>Peaches, Clingstone</b>	Squash
Carrots	Jojoba	Peaches, Freestone	Strawberries
Cauliflower	Kale	Pears, Bartlett	Tomatoes, F.M.
Celery	<b>Kiwifruit</b>	Peppers, Chile	Tomatoes, Processing
Chicory	Kumquats	Peppers, Bell	Triticale
Corn, Sweet	Lemons	Persimmons	Vegetables, Greenhouse
Cotton, American Pima	Lettuce, Head	Pigeons and Squabs	Vegetables, Oriental
Daikon	Lettuce, Leaf	<b>Pistachios</b>	<b>Walnuts</b>
<b>Dates</b>	Lettuce, Romaine	Plums	Watercress
Eggplant	Limes	<b>Plums, Dried</b>	Wild Rice
Escarole/Endive	Mandarins & Mandarin Hybrids		

<sup>1/</sup> California is the sole producer (99 percent or more) of the commodities in bold.

## Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$38.7 billion in value in 2013. Twelve commodities exceeded \$1 billion in value in 2013. The cash receipts of twelve of the top twenty commodities increased in value between 2012 and 2013. The growth in the cash receipts of almonds overshadowed that of grapes as almonds became the second leading revenue-generating commodity in California. Grower returns are subject to change and could result in an updated dollar amount in next year's report.

### Top 20 Commodities for 2011-2013

Commodity	Value and Rank					
	2011		2012		2013	
	\$1,000					
Milk and Cream	7,680,751	1	6,899,743	1	7,617,641	1
Almonds (shelled)	4,007,860	2	4,816,860	3	5,768,100	2
Grapes	3,859,202	3	5,182,968	2	5,585,584	3
Cattle & Calves	2,630,025	4	3,188,125	4	3,048,390	4
Berries, All Strawberries	1,943,727	6	2,130,637	6	2,200,729	5
Walnuts	1,336,900	9	1,505,910	8	1,795,800	6

## Weather Highlights for 2013

The year began with freezing temperatures across Northern California and the Central Valley. A short lived high pressure ridge kept a cold air mass over California resulting in freezing temperatures into Southern California. Growth was slowed due to cool temperatures however, crop conditions continued to be rated mostly good to excellent. In mid-January a strong temperature inversion trapped cold air in the valleys, while higher elevations enjoyed sunny and warm conditions. Light precipitation fell across the state but the South received heavier precipitation as the low pressure, which had settled off the southern coast, drew up subtropical moisture, resulting in widespread moderate to heavy rains at times. February was characterized by increasing temperatures and some light moisture across the state. Cooler than average temperatures persisted and almost no precipitation fell throughout the month. A series of low pressure systems moved through the State from the Gulf of Alaska and swept southward down the Central Valley and into Southern California. The cold, unstable air mass generated some severe thunderstorms and even spawned several small tornadoes in the Central Valley. Rainfall amounts at the lower elevations were fairly limited, usually less than half an inch. The cold nature of the storms meant snow levels were unusually low, down to 2000 feet. Irrigation began in vegetable and fruit crops due to lack of significant rain.

As March began, two rather weak storm systems brushed extreme Northern California and brought some rain to the North Coast, and isolated light showers to the northern mountains, but generally, conditions across California remained dry. Very little precipitation reached Southern California. Towards the middle of the month, an upper-level low pressure system from the Gulf of Alaska spreading showers across the State. There was widespread shower activity across the northern half of the state, while Southern California remained mostly dry and mild. Some particularly heavy rains come to the extreme southwest portions of the State. This was the last widespread precipitation until the end of March and as the pressure system moved on, temperatures warmed. In Southern California record breaking high temperatures in the mid and upper 90s were reported. Towards the end of the month localized precipitation fell in the Central Valley, the North Coast and the Sierras.

During the beginning of April, a low pressure system moved through Central California spreading light to moderate rain. A series of weak storms brought some active weather across Northern California with thunderstorms producing lightning, hail, and even a funnel cloud in Tehama County. Showers delayed planting progress; however, producers were pleased with the additional precipitation winter crops received. Strong winds resulted in some damage to orchards and vineyards. Dry north winds reduced rangeland soil moisture. Towards the end of the month, much of the State experienced temperatures several degrees above average with some locations running 10 to 15 degrees above normal temperatures. Many valley locations would check in temperatures above 90 degrees for the first time and southern desert locations topping 100 degrees.

Beginning in May, dry soils and fuels, combined with warm and occasionally windy conditions helped initiate and spread the Panther fire in Northern California and the Spring fire in Southern California. Rain amounts were generally light, but there were isolated areas that received rainfall for short periods. High and low pressure systems moved across the state throughout the month resulting in temperature variations but not very many extremes.

June began with an active and wet late spring pattern was present in Northern California through the first half of the week as low pressure systems generated rainfall for areas north of Modesto with cooling temperatures for areas farther south. Rainfall totals included over an inch and a half for far northern coastal areas and nearly an inch in the northern Sierra Nevada. Southern and Central California saw little to no rainfall. Triple digit heat was reported all across the Central Valley and the southern interior deserts were also quite hot through this period. The dry and warm conditions aided in the development of field crops and vegetables but resulted in deterioration of rangeland and pasture. Cotton and rice development was responding well to warmer weather. In mid-June, nearly eight thousand strikes were recorded in 48 hours and sparked over sixty fires stretching from the Sierra Nevada Mountains to the coastal range in Sonoma and Napa Counties.

July began with high temperatures across interior Northern California ranging from near 105 up to 110 degrees. Hot temperatures caused an increase in irrigation for all crops and many high temperature records were broken across the State. Monsoonal moisture became entrained in the circulation around the high pressure center and resulted in widely scattered thunderstorm activity in the mountains and deserts. The deterioration of range and non-irrigated pasture from fair to very poor conditions continued. Fire danger was high with red flag warnings in several locations due to the high temperatures, wind and low humidity. There was a growing concern over diminishing watering holes in the foothills of the Sierras.

There was a low pressure system off the Pacific Northwest coast keeping daytime high temperatures below normal for late July to early August in the Central Valley. Cotton progressed well due to high temperatures. Growers continued to irrigate fruit trees and vines to reduce heat stress. Mid-month a low pressure system moving northeastward through Oregon and a high pressure ridge centered over Arizona resulted in a slight warming trend for the interior portions of the state. This system triggered afternoon and evening thunderstorm activity over the deserts and mountains. Rain from thunderstorms brought flooding concerns for portions of Southern California throughout the end of the month.

High temperatures and light precipitation continued throughout September. Towards the end of the month, temperatures began to trend downward statewide and were followed by an early season moist low pressure system that developed off the North Coast. This low pressure system then moved across the northern and central areas of the State with some of the first significant rains of the season. Rainfall amounts totaled over two and a half inches across some areas of Shasta County and the northern Sierra Nevada. This system was cool enough to generate 2 to 5 inches of snowfall on

the higher peaks. Rain events resulted in some fields lodging and slowed harvest progress.

From mid-October a high pressure ridge caused moderate temperatures and minimal rainfall. Towards the end of the month a low pressure system that originated in the Gulf of Alaska, brought strong wind gusts throughout the State and wet snow to the Sierra Nevada. Beginning in November, A series of weak low pressure systems brushed Northern California and brought scattered light rain to the North Coast. Mid-month pressure systems brought light rain to Southern California and cooler temperatures to the entire State. The lingering low pressure kept some cloudiness across Southern California over the weekend while Northern and Central California had mostly sunny conditions. Towards the end of the month, a system spread rain across the State. Winds spread into Southern California and generated a Santa Ana wind episode in the Southland.

Mild weather persisted early December but this changed when two cold fronts from the north brought a cold air mass into the State. This system brought light showers and freezing temperatures to the State, mostly across the higher elevations. This brought widespread snow with significant accumulations down to the valley floor in Shasta County and snow down to 1,000 feet across the central and southern Sierra foothills. Freezing low temperatures persisted and dipped to the lower and mid 20 degrees across the Central Valley and into the Imperial Valley. Overnight low temperatures plummeted to below zero in the Northeastern Plateau. The State remained mostly dry and returning Santa Ana winds brought fire weather concerns to the Southland during the weekend. The latter part of the month experienced no significant precipitation, a very unusual situation. Daytime temperatures were generally above normal all across California during the closing weeks of 2013.

<sup>1/</sup> Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

<sup>2/</sup> A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

## Field Crops

The total value of California field crop production decreased to \$5.12 billion, down 11.2 percent from 2012. Sunflowers, sweet potatoes and Irish potatoes were the only field crops in California whose total value increased from 2012 to 2013. Large to moderate decreases in most field crop values led to the decrease in total field crop value.

Cotton acreage and value decreased for 2013. The price of Upland cotton was \$0.89 per pound, down 4 percent from 2012. The total value of Upland cotton decreased from \$218 million in 2012 to \$134 million in 2013, a decrease of 38 percent. California growers planted 186 thousand acres of American Pima cotton, down 38.0 thousand from 2012. The American Pima cotton price increased from \$1.24 to \$1.67 per pound in 2013. This resulted in the value of American Pima cotton increasing from \$448 million in 2012 to \$489 million in 2013.

In 2013, California produced approximately 7.96 million tons of alfalfa hay, valued at \$1.57 billion. Production of hay other than alfalfa decreased 13 percent, while its total value decreased 16 percent. Total hay production decreased 9 percent from 2012. In 2013, there were lower acreage, production, and prices resulting in hay's value decreasing from \$1.77 billion in 2012 to \$1.57 billion in 2013.

Rice plantings increased by 1 percent, with 567 thousand acres planted in 2013. Medium grain rice contributed to 91 percent of the total rice acreage and 92 percent of the total production. Acres planted and production increased but harvested acreage decreased. The total value of rice production was \$789 million, a decline of 7 percent

from the previous year.

California corn for grain production was valued at \$195 million for 2013, a 10 percent decrease from 2012. Harvested acreage remained unchanged. Yield increased and price decreased from the previous year. Harvested acreage remained at 180 thousand acres while price decreased by 17 percent. Harvested acres of corn silage decreased by 9 percent to 415 thousand acres. Production of corn silage decreased to 11.0 million tons, down 9 percent from 2012.

Fifty-nine percent of the California wheat crop was harvested for grain in 2013. Wheat was planted on 685 thousand acres and 407 thousand were harvested for grain. Overall, production decreased 12 percent and value decreased 15 percent. The production of winter wheat decreased 33 percent from 2012, while Durum wheat production decreased 47 percent from 2012. The value of all wheat production decreased 15 percent to \$270 million.

### Notable Increases in Value:

Potatoes, All .....	25%
Potatoes, Sweet .....	21%
Sunflower, All .....	13%

### Notable Decreases in Value:

Peppermint .....	-36%
Barley .....	-33%
Oats .....	-27%
Corn For Silage .....	-25%
Cottonseed .....	-21%

	2013	690,000	394,000	2.48	975,000	265.19	258,563

1/ Area planted includes preceding fall.

2/ Production is on a clean basis.

3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

4/ Includes varieties not listed separately. Excludes beans grown for garden seed.

5/ Planted acreage is for all purposes.

6/ Production ginned. Cotton bales are 480 lbs. net-weight.

7/ Estimates began in 2005.

8/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting to dry equivalent basis.

9/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis

10/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

11/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is r

12/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

13/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.

14/ Excludes wild rice.

15/ Estimates began in 2000.

16/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

17/ Preliminary Marketing Year Average Price.

18/ Value derived from Minor Commodities Cash Receipts and updated with previous County Agricultural Commissioner data.

19/ Beginning in 2010, winter and summer estimates included in spring total.

## Floriculture

California's floriculture crop leads the nation with a value of \$1.13 billion in sales, for operations with more than \$100,000 in sales, comprising 26.6 percent of the U.S. total wholesale value. Sales increased 3 percent from the 2012 total. California producers decreased from 417 in 2012 to 402 in 2013.

For operations with more than \$100,000 in sales, California accounted for 15 percent of the total value of Total Bedding and Garden plants, the highest-valued crop category in the 15-state program. The wholesale value of California-grown bedding and garden plants at \$299 million in 2013 was down 4 percent from 2012.

California also lead the country in potted flowering plant value for 2013, with a total value of \$297 million wholesale, up 17 percent from the 2012 valuation. California accounted for 38 percent of the 15-state total wholesale value reported for potted flowering plants.

California was the dominant State in cut flower production, accounting for about 78 percent of the total cut flower wholesale value. The \$328 million in value for 2013 was down 3 percent from the 2012 valuation of \$337 million.

(D) Withheld to avoid disclosure of individual operations.

1/ The total covered growing area of 130,288,000 square feet consisted of the following: 30,013,000 square feet of shade and temporary cover; 13,560,000 square feet of glass; 34,103,000 square feet of fiberglass and other rigid greenhouses; 52,612,000 square feet of film plastic (single/multi) greenhouses; and 9,204 acres of open ground.

2/ Included in state totals to avoid disclosure of individual operations

3/ .Pot price is a weighted average of all pots.

## Fruit and Nut Crops

In 2013, California accounted for 62 percent of the U.S. non-citrus fruit and nut production and 74 percent of the national value. Of the citrus crops, California accounts for 33 percent of the U.S. citrus production and 46 percent of the national value. In total, the state produced 17.4 million tons of fruit and nuts, 52 percent of the national total, unchanged from 2012. The state's total value of all fruits and nuts in 2013 was \$21.1 billion, up 13 percent from 2012.

After losing the number one spot in 2011 to almonds, grapes came back in 2012 and reclaimed their number one position, topping \$5 billion in production value. Almonds were a close second at over \$4.8 billion. However, the jockeying continued in 2013, with almonds pushing ahead of grapes as the number one valued fruit or nut crop in California, coming in at \$6.4 billion in production value for 2013. Grapes were a close second this year at \$5.6 billion.

California is the number one producer of almonds in the world, with 67% of 2013 almond shipments exported. California grapes accounted for over 90 percent of the United States utilized grape production in 2013 and California is the top raisin producer in the world. Crops with record California production in 2013 were blueberries, mandarins, table grapes, and wine grapes. California accounted for all or nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage in the country.

The value of U.S. tree nut production in 2013 was over \$9 billion in value, with almonds, walnuts, and pistachios accounting for 93 percent of the sales. California is the nation's only producer of those three nut crops. For almonds and pistachios, California is the number one producer in the world, producing over 80 percent of the world's almonds and around 40 percent of the world's pistachios. For walnuts, California is the second largest producer in the world and the largest exporter. Almonds were over \$6 billion in value in 2013, walnuts were nearly \$2 billion, and pistachios were over \$1.5 billion.

### Notable Increases in California Production:

Blueberries.....	26%
Grapes, Raisin.....	25%
Mandarins.....	20%
Grapes, Table.....	20%
Pecans.....	16%
Grapefruit, All.....	13%

### Notable Decreases in California Production:

Plums, Dried .....	38%
Peaches, Freestone .....	19%
Nectarines .....	17%
Plums.....	17%
Pistachios .....	15%
Cherries, Sweet .....	11%

1/ Non-bearing shown only in year when acreage surveys were conducted.

2/ Return at processing plant door or packinghouse door.

3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were 0 from 2004 to 2013

4/ Production is the fresh equivalent of dried and not dried.

5/ Acreage by county, variety and year of planting for 2007 are available upon request.

6/ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

1/ Non-bearing shown only in year when acreage survey conducted

2/ Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value:  
 2002 - 8.30 million lbs, 2003 - 20.8 million lbs, 2004 - 14.5 million lbs, 2005 - 16.1 million lbs, 2006 - 23.5 million lbs, 2007 - 17.5 million lbs, 2008 - 14.0 million lbs, 2009 - 20.0 million lbs, 2010 - 18.0 million lbs, 2011 - 16.0 million lbs, 2012 - 23.0 million lbs

# Livestock and Dairy

California's total livestock and livestock products cash receipts were \$12.8 billion in 2013, up nearly 6 percent from 2012. The 10 percent increase in dairy receipts was the principle contributor to the rise in total livestock receipts. Livestock and livestock products account for nearly 28 percent of the state's gross cash receipts. Accounting for 7 percent of total US livestock cash receipts, California ranked third behind Iowa and Texas. Dairy products remained the state's leading commodity and accounted for 18.9 percent of receipts for US dairy products or 5.1 percent more than Wisconsin. Receipts for hogs and pigs were up over 3 percent from the previous year. Poultry and egg cash receipts were up almost 11 percent from 2012. California cash receipts for cattle and calves decreased 4 percent from 2012.

The first two quarters of 2013 the Golden State's dairy industry saw prices received for milk bounce around \$18.00 after the 2012 high of nearly \$20 per hundredweight. Prices steadily recovered after July to end the year at \$21.77. The annual average return per hundredweight was \$18.48 compared to the prior year's \$16.52. Feed costs per hundredweight of milk produced were essentially the same as the prior year. The 2013 increase in total feed costs of 1.8 percent was offset by higher production. Alfalfa fed per cow per day dropped off the last half of the year as cheaper corn contributed a growing portion of rations.

The California Department of Agriculture held public hearings in May and December to consider amendments to the milk pricing formulas and applied temporary adjustments through the year and a whey factor adjustment to sunset in 2014. Producers continued to work on fulfilling the plethora of environmental regulations. Late in the year herd size based Waste Discharge Permit fees were imposed. The number of dairies continued to decline with over sixty operations shuttered in 2013. The average number of head per dairy rose by over twenty from 2012.

Since 1993, when it surpassed Wisconsin in milk production, California has been the nation's leading dairy state. Sales of milk and cream contributed \$7.6 billion in 2013. Wisconsin, New York, Idaho and Pennsylvania were the next leading states in total milk production. The top five dairy states accounted for nearly 52 percent of total

US dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter and nonfat dry milk. California continued to be second in total cheese production behind Wisconsin. California ranked 4<sup>th</sup> nationally in milk produced per cow per year in 2011, but dropped down to 6<sup>th</sup> in 2012, and 7<sup>th</sup> in 2013, slipping behind Idaho.

California's dairies produced 41.3 billion pounds of milk, accounting for almost 21 percent of the nation's milk supply. The monthly average production was over 3.4 billion pounds in 2013. California milk utilization experienced declines in fluid and increases in cheese, frozen products cottage cheese and yogurt. California milk going into cheese production comprised 44.2 percent of the state's total production, up 0.7 percent from 2012. Mozzarella continued to account for the bulk of California cheese production, comprising nearly 58 percent of the cheese produced in the state.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-producing counties in California accounting for over 73 percent of the state's total milk production were Tulare (27 percent), Merced (15 percent), Kings (10 percent), Stanislaus (10 percent) and Kern (10 percent). Essentially similar to last year, sales of fluid milk in California averaged 29 percent whole milk, 40 percent reduced fat milk, 14 percent low fat milk, 14 percent skim milk and 3 percent half-and-half.

Milk production per cow for 2013 was 23,178, about 1 percent less than 2012 yields. California's total cheese production of 2.31 billion pounds was up 2.9 percent from 2012. United States cheese exports increased almost 22 percent from 2012 to 316 thousand metric tons per the USDA Foreign Agricultural Service (FAS). Butter exports increased by 88 percent from 49 to 281 thousand metric tons. Export of whey protein products increased by almost 5 percent to 472 thousand metric tons. Exports of non-fat dry milk increased by nearly 25 percent to 555 thousand metric tons. Asian markets imported 53 percent of US dairy exports in 2013, up three percent from 2012. Total tons of dairy products exported to East Asia exceeded the combined exports to Canada and Mexico by nearly 5 percent.

The last time more dairy products were exported to East Asia than to North American trading partners was 1997. The strong overseas demand was led by China and Russia. Competition from Oceania, Europe and South America was hindered by local weather issues and favorable US prices in the last half of the year. California contributes to about 40 percent of the total US dairy exports per the California Milk Advisory Board. US domestic fluid milk consumption per capita continued to slip with milk sales at their lowest levels in thirty years. California's annual production declined 1.3 percent, bucking the usual trend of 2 to 3 percent growth per year. Recent public discussions on the future of the dairy market have focused on promoting Asian exports and value added milks.

Cattle and calf sales totaled \$3.05 billion, compared with \$3.19 billion in 2012. As the drought persisted through 2013 the attractiveness of the state for overwintering cattle was reduced. The typical winter influx of cattle was about half of the prior two years. Local cattle were also taken to Texas, Nevada and Nebraska to find feed and water lacking in California.

The 2008 Proposition 2 impacting animal confinement in California is scheduled to take effect in 2015. Attempts to mitigate it in court failed and a cooperative approach through federal regulation gained the backing of representatives from several states. *Salmonella* outbreaks at a couple western poultry processing plants dominated the headlines in 2013. Poultry industry workshops focused on sustainability, safety and proactive compliance with the growing layers of regulations.

After declining in recent years, sheep and lamb inventory began to recover in part to the respite from high feed costs in the last half of the year. Lamb imports were up in 2013. Commercial sheep slaughter was up over 5 percent, though slaughter weights were down from 2012. The drought challenged lamb producers and prompted some to

sell-off of lambs early or resort to costly early hay feeding.

California's 2013 honey production, at 10.9 million pounds, was down 6 percent from the prior year. Producing colonies totaled 330 thousand, the same as the revised 2012 colony count. The yield per colony averaged 33 pounds, compared to 35 pounds produced in 2012. The average price received for honey was \$2.10 per pound, up 16 cents from the average price per pound in 2012. The importance of bees in California agriculture is apparent when the majority of the nation's colonies are needed for almond pollination. The focus of research into the decimation of bees turned towards agricultural chemicals playing a significant role. Industry and academic researchers worked on modifying chemical application practices to mitigate the loss of these pollinators, an integral component of a large sector of California's agriculture.

California Livestock Cash Income, 2012-2013 <sup>1/</sup>

1/ Live weight; adjustments made for changes in inventory and for in-shipments.

2/ Live weight; excludes custom slaughter for use on farms where produced and inter-farm sales within the state.

3/ Receipts from marketing and sale of farm slaughter.

4/ Livestock total does not include sheep and lambs after 2010.

5/ Cattle and calf annual average value not published beginning 2012.

6/ Hog and pig annual average value not published beginning 2012.

## Vegetables and Melons

California continued as the leading fresh market vegetable producing state in 2013, accounting for 47 percent of the U.S. harvested vegetable acres, 51 percent of the national production, and 54 percent of the value, for the 24 selected vegetables and melons estimated.

California also led the nation in processing vegetable production during 2013, with 27 percent of the U.S. harvested acreage, 71 percent of the national production and 54 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2013 fresh and processing vegetable and melon production was \$7.3 billion, up from 2012's revised total of \$6.1 billion. Lettuce remained the leading vegetable crop in value of production, at \$1.8 billion, followed by tomatoes with \$1.4 billion.

Vegetable crops that had value increases were asparagus, broccoli, cabbage, carrots, cauliflower, sweet corn, head lettuce, romaine lettuce, cantaloupe melons, honeydew melons, spring onions, summer

non-storage onions, bell peppers, chile peppers, pumpkins, squash, fresh market tomatoes and processing tomatoes. Crops that had decreased value included snap beans, cucumbers, watermelons, summer storage onions, and processing onions.

### Notable Increases in Production:

Honeydew .....	21%
Cabbage, Fresh Market .....	19%
Cantaloupe .....	18%
Onion, Spring .....	10%
Spinach, Fresh Market .....	8%
Carrots, Fresh Market .....	5%
Broccoli .....	5%

### Notable Decreases in Production:

Head Lettuce .....	11%
Garlic .....	11%
Fresh Tomatoes .....	10%
Artichokes .....	9%
Celery .....	9%
Onion, Summer Storage .....	5%
Onions, Processing .....	5%

1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

2/ Includes both fresh marketing and processing vegetables.

3/ 2011 to 2013 were not published to avoid disclosing data for individual operations.

4/ Primarily dehydrated and other processing. Production includes quantity harvested. Total Values equals production minus summer storage shrinkage and loss ( 250,000 cwt per year).

5/ Included in summer storage onions.

6/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc.

7/ Data in 2013 was not published to avoid disclosing data for individual operations.
