

Doug Johnson, Executive Director  
California Invasive Plant Council

***What is your vision for California agriculture by 2030?***

Agricultural and environmental stakeholders have developed a close working relationship to successfully protect that state's natural resources from invasive species, and all Californians have a heightened awareness of the need for effective programs to guard against invasive species.

***What will be the biggest challenge in achieving that vision?***

Steady long-term funding for wildland protection work on the ground and for strategic planning at the landscape scale.

***In 2030, how has public perception of agriculture changed?***

Californians in all regions and all walks of life take pride in California agriculture. Those working in agriculture are seen as stewards of the land and providers of nutrition.

***What is a "must have" in an Ag Vision for California?***

California must have a state coordinating body on invasive species that allows agencies and stakeholders to work together most effectively. The state must also develop funding sources to provide steady funding to protect the state from invasive species.
