

Dear AgVision organizers,

As a researcher interested in exotic species that impact agricultural and wild lands, I recently had the opportunity to visit with USDA researchers housed at the UC Davis campus. With researchers from the CDFA, USDA scientists, Drs. Anderson, Spencer, and Grewell are doing an outstanding job of providing new techniques for managing weeds that have a huge economic impact on wetland agricultural lands in California. It is evident that there is a need for a new facility at the Davis location and I urge you to consider providing a new shared facility where they can more effectively conduct this crucial research.

Thank you for your commendable effort in seeking outside input into the great work already conducted by those agencies associated with ag in California, and particularly those involved with the essential task of weed control.

Sincerely,  
Kristina
