California Desert Towns Become Haven for a New Crop: Marijuana

One of California’s driest climates is poised to become a farming hub for recreational marijuana, legalized by voters.
in 2016. This will plant a new farming industry in a place of chronic groundwater problems.

Desert Hot Springs, shown here in 2005, embraced the marijuana growing industry as a revenue source to avoid municipal bankruptcy. It will collect taxes on growers and dispensaries, who have flocked to the city since voters approved Prop. 64 in November 2016, which legalized recreational marijuana use by adults. Rodrigo Pena, The Press-Enterprise, via AP

**IN THE RACE** to meet California’s demand for newly legalized recreational marijuana, the Coachella Valley is blooming fast as the industry’s new farming hub. Trouble is, the region also suffers severe groundwater depletion, a problem that could be worsened by the popular crop.

California voters approved Proposition 64 in November 2016, allowing the retail sale of marijuana to adults for recreational purposes from January 1, 2018. Since then, several cities in the Coachella Valley have made moves to embrace industrial-scale marijuana growing.

Leading the pack is Desert Hot Springs, a city of 28,000 people that has struggled in the shadow of Palm Springs for decades. As the city tilted toward municipal bankruptcy in 2014, it decided to embrace marijuana as a revenue source. Voters approved local ballot measures allowing the city to tax marijuana dispensaries and growing operations, and the city reclaimed a vast tract of mostly vacant industrial land to allow indoor marijuana cultivation.

In this Oct. 12, 2016, file photo, Anthony Viator hangs harvested marijuana buds for drying on grower Laura Costa’s farm near Garberville, Calif. State tax collectors are taking initial steps to get a hand into the vast, emerging economy, with billions of dollars at stake in the

future for the state treasury. State analysts have estimated that state and local
governments could eventually collect over $1 billion annually from the production and sale
of legal pot. Photo by Rich Pedroncelli, Associated Press

“The [marijuana] industry started coming out and buying up all the land,” said Mayor Scott Matas.
“The only thing left there are a couple churches and a pool supply store. Everything else was bought by
the industry. All the dilapidated auto parts places are gone and everything’s being reconstructed,
which is nice.”

Initially the city intended to embrace only medical marijuana, but the first growers who sought permits
asked the city to add language allowing marijuana cultivation for recreational purposes, if that was
ever legalized, long before Prop. 64 hit the statewide ballot. They got the language, and the proposition
later passed.

As a result, Desert Hot Springs has been besieged with applicants for cultivation permits, industrial
land has been snapped up at record prices, and massive warehouse-style buildings are being erected
to create climate-controlled indoor marijuana farms.

Seven marijuana dispensaries are already open in Desert Hot Springs, and two more are going through
the permit process. The city has 43 permit applications from growers that it has either already
approved or is reviewing. Two growers are up and running, with three more under construction.

But little has been said about water demand. Despite a long history of groundwater overdraft in the region, Matas said he’s not concerned.

“An 18-hole golf course uses four to five times the amount of water one of these large cultivators would use,” he said. “We don’t think it’s going to impact our aquifers.”

Local environmental groups are withholding judgment as they watch the industry unfold.

“It’s in kind of a state of flux right now, so we’ll just have to wait and see,” said Jeff Morgan, chairman of the Sierra Club’s Tahquitz Group. “I think there is limited demand, and I think it will be easily exceeded once you get a few large players in the game.”

But no one knows how big the industry could get. Wall Street investors are already getting into the marijuana business, and one analyst projects U.S. sales of legal marijuana could grow nine-fold in the next decade alone.

Desert Hot Springs could be well positioned as a center of cultivation: It’s only a two-hour drive from Los Angeles, the nation’s second-largest metropolitan area.
The new growers in Desert Hot Springs will buy water from Mission Springs Water District, the local water and sewage treatment utility. The district relies exclusively on groundwater to meet all water demand in the area and has no other customers that could be defined as “agriculture.”

According to its 2016 Urban Water Management Plan, the district’s primary aquifer has shrunk about 100ft (30.5m) since the 1950s as a result of urbanization and scarce precipitation in the region. Overdraft is now estimated at 9,000 acre-feet per year, enough to serve 20,000 average homes annually.

Together with other water agencies in the Coachella Valley, in 2001, Mission Springs Water District began a program to replenish the aquifer with water imported from the Colorado River. This has begun to reverse the overdraft problem. The replenishment water is expected to be necessary for the foreseeable future to sustain the aquifer.

Now with a thirsty new agricultural industry in town, the effects on the aquifer remain unclear, because it will be several years until the industry is fully developed.

“Right now, we don’t see a demand that exceeds our supply, or even, thus far, that threatens the sustainability of our supply,” said John Soulliere, spokesperson for the Mission Springs Water District.
Other cities in the region have also opened their
gates to marijuana cultivators, including nearby
Cathedral City and Coachella. But none has been as
inviting as Desert Hot Springs, said Greta Carter,
partner of High Road Consulting Group, a firm
working with a number of growers to set up
cultivation facilities.

“I will tell you that, hands down, the city has been
more embracing and receptive to our industry than
others have,” Carter said. “Some cities will try to
overregulate us. Desert Hot Springs has been
rational about what the right amount of regulation
is. We believe we have found a piece of heaven here,
so we’re pretty excited.”

Mission Springs Water District is not imposing any
unique water supply regulations on the marijuana
industry, Soulliere said. Each new grower will get a
water connection appropriate for their size and will
pay a metered water bill, just like any other
commercial customer.

The district is counting on growers to adopt tight
water conservation measures to control costs,
he said.

“We’re delighted, frankly, with the practices they’re
employing,” Soulliere said. “At the end of the day, if
their product is too expensive because they’re
wasting water, then they’re not going to be in
business very long.”
The growers Carter is working with all rely on frugal drip irrigation systems. They also plan to capture all drain water from plants and recycle it multiple times using reverse osmosis systems. The growing rooms will include systems to capture humidity emitted by the plants and channel that into the water supply system.

“We’re trying our absolute best to not let any water go down the drain that we can potentially capture and reuse,” Carter said.

Where growers could run into trouble is with the drain water they return to the sewage treatment system. The water district is requiring them to submit monthly testing reports, verified by an engineer, detailing any contaminants in the wastewater such as fertilizers and pesticides. They could be fined, for example, for excessive salinity, which would increase the water district’s treatment costs.

Carter said her growers are installing systems that will create drain water that is less saline than the source water.

“It’s far cheaper, from our point of view, to replace filters than to pay a fine from the district for giving them water that’s not acceptable,” said Carter, who is also executive director of the Desert Hot Springs Cannabis Alliance Network, a nonprofit trade organization.
There’s still a lot of debate and confusion about how much water marijuana plants actually consume.

A recent study led by scientists at the California Department of Fish and Wildlife estimated a single marijuana plant consumes as much as 6 gallons (22.7 liters) of water each day. That study focused on outdoor growing, and it soon came under attack by the industry, which argued a more accurate number is 2 gallons (7.6 liters) per day or less.

Indoor growing, as required in Desert Hot Springs, will likely use a lot less water because every step in the process is carefully controlled. Carter estimates each marijuana plant in her facilities will consume a half-gallon (1.9 liters) of water per day or less.

The 30,000 square feet (2,800 square meters) growing facility she currently has under construction will house about 10,000 marijuana plants under year-round growing conditions. At a half-gallon per plant (1.9 liters), that equals the daily water consumption of about 16 average households, assuming household water use of 360 gallons (1,363 liters per day).

Some of the new growing operations in Desert Hot Springs will be much larger, however. The city has approved one that will stretch over 1.8 million square feet (167,225 square meters). That’s as big as nine large Walmart stores. Another is proposed at 1 million square feet (93,000 square meters).
Growers have the option to drill their own water wells: There are no local regulations preventing that. But it would be an expensive option. Groundwater in many locations lies as much as 1,000 ft (305 meters) deep. That makes for a costly drilling operation. Pumping groundwater also requires a lot of expensive electricity.

Carter said she doesn’t know any grower who plans to drill their own well.

“For people to come in and be irresponsible won’t be tolerated,” Carter said. “No one should be fearful of us, because we’re under a microscope right now and we will continue to perform underneath that microscope.”

Getting to the Roots of California’s Drinking
The State Water Project Is Going Through a Classic Midlife Crisis

It's been 57 years since voters approved the State Water Project, one of two major water conveyance systems in California, and the project is in need of big and small fixes, writes Tom Philp of Metropolitan Water District.
My age begins with a “five,” so on this rare issue, I speak with a degree of authority.

I know a midlife crisis when I see one.

I see one in the State Water Project, approved by voters 57 years ago.

Like many midlife crises, some changes are needed. Repairs will be made. Some makeovers may be extreme.

And as it all unfolds, perhaps there is some value at looking at the centerpiece of California water infrastructure, from top to bottom, in a semi-human manner.

Let us start with the sagging.
The California Aqueduct is the ribbon of concrete transporting water hundreds of miles from Northern California to the Southland. In Kern County, there are spots along the route in places like Buena Vista and Lost Hills where the aqueduct is “settling,” as the engineers call it.

This is not a function of groundwater subsidence, which is unrelated to aging. This has to do with the unsettled soils surrounding the aqueduct and the original design that may not have fully anticipated having an aqueduct on top of some giggly geology in Kern.

The engineering solution will be a relatively minor makeover – the equivalent of a tummy tuck combined with the proper foundation. It is hardly surprising that a water highway that is hundreds of miles long will reveal its weak spots over time.

In the Delta, there is a man-made gateway to the man-made forebay where the water is lifted into the California Aqueduct. It is now undergoing the oral surgery equivalent of crown replacement. Concrete at the base of the gateway came loose as the diversions were pulling maximum supplies into the forebay this winter. Nearly 50 years for the original crown is arguably not bad.

Meanwhile above the Delta on the Feather River, there is nothing trite about the travails at Oroville Dam. Complete reconstruction surgery appears to
be required for the injured main spillway, whose troubles were as spectacular as they were scary. A small battalion of engineers from various state and federal agencies will also identify the appropriate cure for the emergency spillway. For a few hours in February, it seemed perilously close to failure as water for the first time was flowing over it, prompting an evacuation downstream and increased flows down the injured main spillway until it could handle all the necessary releases.

The final diagnosis may turn out to be an imperfect spillway design, imperfect spillway inspections, imperfect maintenance or a combination of all three. Regardless of the outcome of the forensic evaluation identifying the cause of the incident, age will most certainly be a factor.

Last but not least are the existing intakes for the State Water Project in the Delta and how to handle their aging problems. A version of a double coronary bypass is under development in the state-federal process known as California WaterFix.

Two new twin tunnel pipelines would transport supplies captured by three new intakes in the northern Delta to the forebay in the southern Delta (just beyond the site of the crown replacement) that feeds the California Aqueduct. This would allow the system to access supplies in two locations very far
apart, the new ones in the northern Delta, the existing ones 30 miles away in the south.

Why a Delta double bypass? Dividing the water captured in the northern Delta into twin tunnels rather than one would improve reliability and help restore a healthy ecosystem.

How many lungs do you have? System redundancy was not invented by California WaterFix. It has a tried and true history of engineering wisdom and success.

Meanwhile, we all age.

Tick.

Tock.

When the State Water Project’s various engineering feats reach their 60th birthday, some may be very different than when they were 50. Will the “crisis” be over? Hopefully we are taking actions in the months ahead so that the next generation of aging will be more graceful than the many aches and pains of today.

PRODUCT: ZP RODENT BAIT AG

REGISTRATION NUMBER: 12455- 17-AA
COMPANY NAME: BELL LABORATORIES, INC.
PRODUCT STATUS: A - ACTIVE

REGISTRATION

REGISTRATION DATE: 16-MAY-80
INACTIVATION DATE:

Registration Specialist:

STEPHEN PHILBIN

FULL PRODUCT(SLN/EXPERIMENT)

ISSUE DATE:
EXPIRATION DATE:

REGISTRATION TYPE: A - SECTION 3 REGULAR REGISTRATION
GENERAL CATEGORY: C - CHEMICAL
SIGNAL WORD: CAUTION
FORMULATION: E0 - GRANULAR/FLAKE
DENSITY: GRAVITY:
MANUF/REFORM/REPACK:
AG COMMISSIONER USE:
FUMIGANT: X
RODENTICIDE or OTHER USES: X
CONFIDENTIAL:

SOIL APPLICATION: A - APPLIED DIRECTLY TO SOIL
AERIAL/GROUND: C - GROUND/AERIAL

PESTICIDE TYPE

U0 VERTEBRATE CONTROL

HEALTH HAZARD

B7 CAUSES EYE IRRITATION
B0 SKIN/EYE
C0 INHALATION
A0 ORAL

ENVIRONMENTAL HAZARD

B0 WILDLIFE
C0 MAMMALS
D0 BIRDS
K0 ENDANGERED SPECIES/THREATEN (CA RESTRICTIONS)
A0 WATER (DO NOT APPLY DIRECTLY TO WATER)

TARGET PEST

O1 RODENTS
O0 MAMMALS

APPLICATION METHOD

T0 ANT-WASP/RODENT MOUNDS
E0 BAIT (BAITS, PASTES)
Q0 BROADCAST

SPECIAL INSTRUCTIONS

SPECIAL STATUS

B0 RESTRICTED MATERIAL
B1 FEDERALLY RESTRICTED
B2 CALIFORNIA RESTRICTED

RODENTICIDES

Rat and mouse poisons, or rodenticides, pose a serious risk to public health and the environment. These are toxic products that cause severe health damage and even death in nontarget wildlife, pets and people. Because of their toxicity and the weak safety standards for their use and distribution, rodenticides are a serious threat to any living thing that accidentally ingests them.

While there are several types of rodenticides, the most dangerous on the market are second-generation anticoagulant rodenticides, aka “super-toxic” rodenticides. Super-toxic rodenticides are slow-acting substances that block the synthesis of vitamin K necessary for normal blood clotting, causing their consumers to bleed uncontrollably and die slow and agonizing deaths. There are four types of these silent, super-toxic killers (brodifacoum, bromadiolone, difethialone and difenacoum), all of which have long half-lives that allow rodents to ingest them multiple times before dying. Through a secondary-poisoning process called bioaccumulation, rodenticide residues build up in rodent carcasses to levels many times the minimum lethal doses — exposing rodent-eating predators and scavengers to immense amounts of poison.

Cases of secondary poisoning are thus potentially disastrous for animals like hawks, owls, foxes and mountain lions, and they’ve been reported in numerous imperiled species, including various raptors (such as owls, hawks and eagles), endangered San Joaquin kit foxes and Pacific fishers. While some rodenticide-poisoned wildlife can recover if found and treated in time, many inevitably perish. And even humans — especially children — and household pets can suffer from contact with rodenticides. These toxics obviously pose risks unworthy of the suffering and biodiversity loss they cause.

OUR CAMPAIGN
Because of rodenticides’ widespread harm to many kinds of life, the Center for Biological Diversity is working hard for regulations that reduce their collateral damage.

In California’s San Francisco Bay Area, species at risk of poisoning by rodenticides include the endangered San Joaquin kit fox, Alameda whipsnake, Swainson’s hawk and salt marsh harvest mouse. After continuous legal pressure on the U.S. Environmental Protection Agency, including from a 2007 legal challenge (http://www.biologicaldiversity.org/swcbsd/PROGRAMS/science/pesticides/bay-area-complaint-05-30-2007.pdf), the Center was able to reach an agreement (http://www.biologicaldiversity.org/campaigns/pesticides_reduction/bay_area/pdfs/ProposedStipulatedInjunction7-1-09.pdf) with the EPA to restrict the use of 74 toxic pesticides (http://www.biologicaldiversity.org/campaigns/pesticides_reduction/pdfs/74_pesticides.pdf) — including rodenticides — in Bay Area habitat for these and other species, until the agency formally completes a legally required consultation with the U.S. Fish and Wildlife Service and evaluates the pesticides’ harmful effects. In support of our case, the Center released a 53-page comprehensive scientific report (http://www.biologicaldiversity.org/publications/papers/bayareapesticidesreport.pdf) outlining the harms pesticides inflict on these animals, as well as the EPA’s failure to address those harms as required under the Endangered Species Act.

The Center filed suit (http://www.biologicaldiversity.org/news/press_releases/2011/pesticides-01-20-2011.html) again in January 2011, specifically challenging the EPA’s failure to follow the Endangered Species Act’s requirements to consult with the Fish and Wildlife Service (http://www.fws.gov/midwest/endangered/section7/section7.html) about the threats of registered rodenticides to listed species and their habitats. Then, in December of that year, we asked the California Department of Pesticide Regulation to ban the use of second-generation coagulants in the state of California (http://www.biologicaldiversity.org/news/press_releases/2012/rodenticides-12-11-2012.html), or at minimum to significantly restrict their use.

After 15 years of analyzing the problem and years of pressure from the Center, the EPA finally issued a decision (http://www.biologicaldiversity.org/news/press_releases/2013/rodenticides-01-30-2013.html) in early 2013 to place new limitations on the use of toxic rat poisons in an effort to minimize the risk of their contact with children and pets in the home. Unfortunately the measure is inadequate to address rodenticides’ threats to nontarget wildlife, leaving imperiled species’ habitat unprotected from the deadly toxins. So second-generation anticoagulants continue to travel up the wildlands food chain, mercilessly poisoning and killing natural predators of rodents.

The Center will continue to push for stricter regulations of rodenticides to ensure that both people and wildlife receive strong protections from them.
For a full chronicle of the Center’s work on pesticides reduction, check out our action timeline (http://www.biologicaldiversity.org/campaigns/pesticides_reduction/action_timeline.html).

For more information on nontoxic rodent control methods, you can read more below or visit SafeRodentControl.org (http://saferodentcontrol.org/).

Safe, Nontoxic Methods for Rodent Control

Prevention is fundamental in practicing safe, nontoxic rodent control. Removing sources of food, water and shelter to discourage the rodents’ presence is highly effective before and after rodent infestation breaks out. The following is helpful guidance on integrated pest management techniques to addressing potential rodent invasions and treating existing ones.*

PEST-CONTROL METHODS THAT ARE SAFE BETS FOR WILDLIFE

- Don’t leave pet food and water outdoors, especially overnight. Store pet-food supplies indoors in sealed containers.
- Seal gaps around air vents to building sub-areas and attics and any other openings that penetrate exteriors. Use sweep seals under doors. A rat can squeeze through a hole the size of quarter, a mouse through a hole smaller than a dime.
- Don’t plant ivy — it provides shelter and a food source for rodents: snails and slugs. Ivy on walls can form "rat ladders" to windows, attics and other interior spaces.
- Keep compost piles as far away from structures as possible.
- Keep grass cut and trees trimmed as far away from structures as possible.
- If you have a birdfeeder, use a squirrel guard at the base to keep rodents away. Keep the ground area clean of birdseed.
- Keep outdoor grills and cooking areas clean.
- Keep firewood off the ground and as far away from structures as possible to mitigate shelter opportunities.
- Use city-issue plastic trash bins. If cracked or missing a lid, contact the Department of Sanitation for a free replacement.
- Clean up trash in garden areas to remove shelter for rodents.

If the above methods aren’t sufficient, you may be forced to take secondary-control steps (secondary_control.html). Note: The Center does not condone cruelty to rodents or any other living creatures; these techniques are mentioned in order to best combat the toxic dangers of rodenticides while also preventing or causing minimum harm to rodents themselves. Some of this content may be unpleasant to read.
