

DATE: November 7, 2014
TO: All County Agricultural Commissioners
FROM: Plant Health and Pest Prevention Services
SUBJECT: **AQW Pest Report No. 41-2014**
Weekly AQW Report: For the week of October 2-8, 2014

Attached is the report for all A, Q and W pests intercepted or detected in California from October 2-8, 2014. Pests are identified by the California Department of Food and Agriculture's Plant Pest Diagnostics Laboratory.

Tephritidae (Fruit Fly) Intercepted by Yolo County PDRs: 570P06217072 - 7073

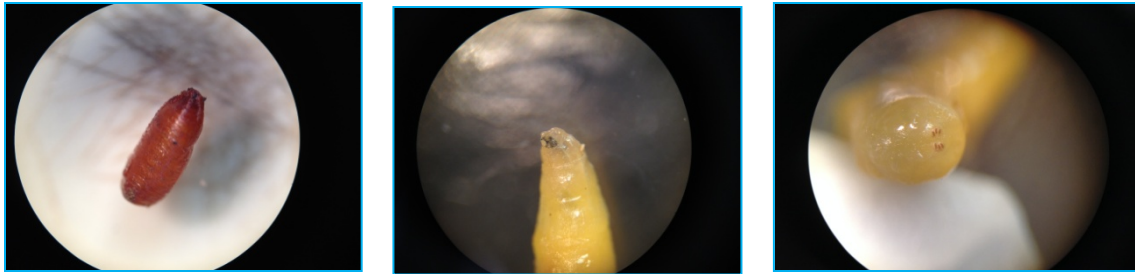

On September 25, 2014, Sacramento County Dog Team Inspector/Handler Jennifer Berger with dog Dozer intercepted a package at the West Sacramento USPS distribution facility. The box originated from Puerto Rico and was en route to an addressee in Roseville, Placer County. Yolo County inspectors Bill Lyon and Kevin Martyn contacted the shipper by telephone and obtained permission to inspect the box. Inside the package was approximately two pounds of avocados and five mangos.

During inspection, suspect fruit fly exit holes were noted on one of the mangos and fly pupae were found in the bottom of the box. When cut open, the fruit produced dozens of fly larvae of various life stages. Dr. Martin Hauser of the Plant Pest Diagnostics (PPD) Laboratory determined the larvae to be Q-rated Tephritidae (fruit fly) and forwarded the larvae for more specific identification for molecular testing which resulted in A-rated *Anastrepha obliqua* (Caribbean fruit fly). Q-rated Diaspididae (scale) was also intercepted.

Various life stages of fruit fly larvae, courtesy of Yolo County

A notice of rejection was issued due to the following violations, and shipment of mango and avocado was destroyed. SITC Referral Form was completed and submitted to the United States Department of Agriculture/Smuggling Interdiction and Trade Compliance program.

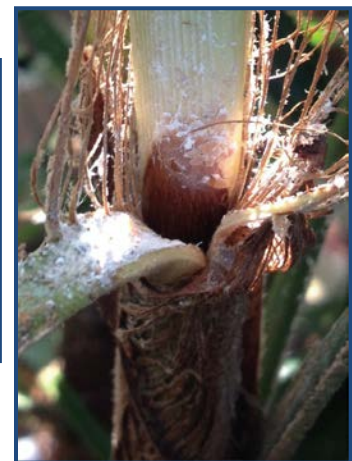

- Puerto Rico Federal Territorial Quarantine, Code of Federal Regulations (CFR) [Section 318.58](#)
- California State Exterior Quarantine for Caribbean fruit fly, California Code of Regulations (CCR) [Section 3252](#)
- California Food and Agricultural Code (FAC) [Section 6321](#) (Hosts of Tephritidae)
- California FAC [Section 6461.5](#) (live pests)
- California FAC [Section 6421](#) (lack of markings)

Palm Mealybug Intercepted during Nursery Inspection

PDR: 370P06228100

On October 6, 2014 during a routine nursery inspection of plant material shipped from Hawaii, San Diego County Inspector Gregory Terhall intercepted a live pest on the growing tips of new leaves of *Rhapis excels* (lady palm). Inspector Terhall collected a sample and submitted it to the PPD Laboratory for identification and the Laboratory identified it as Q-rated *Palmicultor palmarum* (palm mealybug).

The certified shipment of plant material from Hawaii was in violation of California FAC [Section 6461.5](#) (live pests). A notice of rejection was issued and the shipment is pending drench and foliar treatment. The shipment will be released after drench and foliar treatment.

About Palm mealybugs: they are known to infest ornamentals and fruit trees. Mealybugs weaken plants by feeding on plant juices then excreting honeydew upon which soot mold grows. Black sooty mold growth reduces photosynthesis causing defoliation and occasionally death of a young plant. The honeydew also attracts ants that can farm and protect mealybug from predators and parasitoids.

Blythe Station – RIFA Intercepted

PDR: BL0P06126657

On October 4, 2014, a commercial truck shipment of nursery stock from Florida arrived at the Blythe Border Protection Station. Supervisor Gilbert Canchola processed the paperwork that included all proper certification. Supervisor Rosie Villa, who assisted in the physical inspection of the load, looked in the back entrance on the bed of the trailer and intercepted two live ant pests. Supervisor Villa proceeded to take images of the specimen using the station's digital imaging microscope. Images were emailed to the PPD Laboratory for tentative identification. An ensuing notice of rejection was issued for the nursery shipment, in violation of California FAC [Section 6461.5](#) (live pests).

Image of Red Imported fire ant from <http://www.cdfa.ca.gov/plant/pdep>

The driver was informed of the situation and opted to wait for the pest identification. At this time, Station Manager Dennis Day was informed of the situation and had Supervisor Canchola and Inspector Kathy Burries bait the trailer using the vent doors to drop bait inside each corner of the trailer since the doors to the trailer's entrance had a lock in place.

The next day, lead Inspector Shawn Robinson inspected the baited shipment and saw the trailer was infested with numerous ants. The driver informed the broker of the situation. The broker then instructed the driver to return the nursery stock back to the shipper (origin) in Florida.

The specimen were submitted to the PPD Laboratory and were positively identified as A-rated *Solenopsis invicta* (red imported fire ant).
