

CALIFORNIA DEPARTMENT OF
FOOD & AGRICULTURE

Karen Ross, Secretary

DATE: November 8, 2016

TO: All County Agricultural Commissioners

FROM: Plant Health and Pest Prevention Services

SUBJECT: **AQW Pest Report No. 41-2016**
Weekly AQW Report: For the week of October 6-12, 2016

Attached is the report for all A, Q and W pests intercepted or detected in California from October 6-12, 2016. Pests are identified by the California Department of Food and Agriculture's Plant Pest Diagnostics (PPD) Laboratory.

Alameda County Dog Team Interception

PDRs: 010P06556587- 6591

On October 5, 2016, Alameda County Dog Team Inspector/Handler Lisa Sampson with dog Cosmo and Inspector Chris Craft intercepted an unmarked box from Florida at the USPS facility in Oakland.

Inspector Craft obtained permission from the shipper to open and inspect the box. The box contained cut stems and curry leaves with live pests on both the leaves and stem.

Pest samples were submitted to the PPD Laboratory for identification and identified as A-rated *Pseudaonidia trilobitiformis* (trilobe scale) and Q-rated Diaspididae (armored scale).

Additionally, Q-rated Psyllidae (probably *Diaphorina citri*) and Q-rated Coccidae (soft scale) were identified (PDRs: 010P06556592-6593). The shipment was destroyed.

A notice of rejection was issued for the following violations.

- Federal Domestic Quarantine for Citrus Greening and Asian Citrus Psyllid, CFR [Section 301.76](#)
- California State Exterior Quarantine for Citrus Pests, California Code of Regulations (CCR) [Section 3250](#)
- California Food and Agricultural Code (FAC) [Section 6461.5](#) (live pests)
- California FAC [Section 6421](#) (lack of markings)

About Scales^{1/}: "Scales are sucking insects that insert their tiny, strawlike mouthparts into bark, fruit, or leaves, mostly on trees and shrubs and other perennial plants. Some scales can seriously damage their host, while other species do no apparent damage to plants even when scales are very abundant. The presence of scales can be easily overlooked, in part because they do not resemble most other insects."

The importance of infestations depends on the scale species, the plant species and cultivar, environmental factors, and natural enemies. Populations of some scales can increase dramatically within a few months when the weather is warm, and honeydew-seeking ants protect scales from their natural enemies. Plants are not harmed by a few scales and even high populations of certain species apparently do not damage plants.”

Noxious Weed Intercepted off Barley Grain at Truckee!

PDR: TR0P06120905

On September 27, 2016, a commercial shipment of Barley (bulk) grain entered the Truckee Border Protection Station. The shipment was pulled over to secondary inspection area, and Inspector Anthony Cruz took a sample with a grain probe in five different areas.

During the inspection, Inspector Cruz noted that on top of the grain and all throughout the shipment that there were noticeable suspect invasive weed heads. As a result, a notice of rejection was issued for the shipment (66-071 form) due to being in violation of California FAC [Section 6341](#) (seed pests).

The driver opted to have the shipment diverted to an approved mill, under a Warning Hold Notice (66-008 form). It was noted in the comments section of the warning notice that weed pests were found in the shipment.

Refer to the following for guidelines and approved mills:

- Station Operating Guide, section 1.3.3 – Feed Grain (Bulk shipments):
<http://phpps.cdfa.ca.gov/borderstations/OpGuide/Operating%20Guide%20-%20Section%201.pdf>
- [CCR 3556](#) Feed Grain Approved mills
- [CCR 3557](#) Seed Screenings and Cleanings Approved mills

Specimens collected were submitted to the PPD Botany Laboratory and positively identified as W-rated *Cirsium arvense* (Canada thistle).

Pictured- top view commercial shipment of Barley (bulk) grain - infested with *Cirsium arvense* (Canada thistle) invasive weed species. Images are courtesy of the Truckee Station.

About Canada thistle¹¹: “*Cirsium arvense* is one of the most troublesome noxious weeds in the U.S. It can infest diverse land types, ranging from roadsides, ditch banks, riparian zones, meadows, pastures, and irrigated cropland, to the most productive dry land cropland. Large infestations

significantly reduce crop and cattle forage production and native plant species. It is a host plant to several agricultural pests and diseases. Canada thistle prefers moist soils, but it can be found in a variety of soil types. It has been found at elevations up to 12,000 feet.”

Fresno County Dog Team Interception

PDRs: 100P06282597, 2599

On October 5, 2016, Fresno County Dog Team Inspector/Handler Samantha Tomlinson with dog Soya and Inspector James Blake intercepted a marked and certified box from Hawaii at FedEx Air in Clovis.

The box contained pineapples (fruit). Upon inspection of the fruit, Inspector Blake found some suspect pests on the fruit. The pest samples were submitted to the PPD Laboratory and identified as Q-rated *Pheidole megacephala* (bigheaded ant) and Q-rated insect eggs.

A notice of rejection was issued for violation of California FAC [Section 6461.5](#) (live pests), and the shipment of pineapples was destroyed.
