

CALIFORNIA DEPARTMENT OF
FOOD & AGRICULTURE

Karen Ross, Secretary

DATE: January 9, 2017

TO: All County Agricultural Commissioners

FROM: Plant Health and Pest Prevention Services

SUBJECT: **AQW Pest Report No. 50-2016**
Weekly AQW Report: For the week of December 8-14, 2016

Attached is the report for all A, Q and W pests intercepted or detected in California from December 8-14, 2016. Pests are identified by the California Department of Food and Agriculture's Plant Pest Diagnostics (PPD) Laboratory.

Sugar Apple Seed Hides Surprise Visitor from Florida

PDR: 190P06060341

On December 8, 2016, two boxes from Miami, Florida, with holes cut along the sides, arrived at the Santa Fe Springs FedEx facility in Los Angeles County. Los Angeles County Inspector Gerda Jasinskaite noticed the boxes and pulled them off of the belt for a closer look. Both boxes displayed handwritten notes saying "May be opened for ag inspection, contents sugar apples", but did not have the required statement of origin.

The boxes were opened and upon surface inspection of the sugar apples, Inspector Jasinskaite found what she suspected and were later confirmed

Eurytomid wasp (*Bephratelloides cubensis*). Photo courtesy of Dr. Gevork Arakelian, Los Angeles.

by the PPD Laboratory to be Q-rated mealybugs from the family Pseudococcidae. Also, there was no required certificate for treatment of Caribbean fruit fly.

Inspector Jasinskaite took both boxes back to the Los Angeles Agricultural Commissioner's office for further inspection. With the

help of deputy Rob Smice,

Inspector Jasinskaite noticed a black hole on some of the segments of the sugar apples that seemed indicative of an insect bore hole. As Inspector Jasinskaite continued breaking down the fruit, she observed an insect exit hole in one of the seeds within the fruit and was eventually able to find a wasp in another segment of the sugar apple. The wasp was submitted to the PPD Laboratory and identified as a Q-rated *Bephratelloides cubensis* (eurytomid wasp).

A notice of rejection was issued due to the following violations and both boxes of sugar apples were destroyed.

- ☐ California State Exterior Quarantine for Caribbean Fruit Fly, California Code of Regulations, ([CCR Section 3252](#))
- ☐ California FAC [Section 6461.5](#) (live pests)
- ☐ California FAC [Section 6421](#) (lack of markings)

Bagworm Interception in Riverside County Nursery

PDR: 331P06200280

On December 6, 2016, Riverside County Inspector Jennifer Chandler examined a fleet of plants from a Florida nursery. Upon inspection, an insect pupal case was noticed near the tip of an *Dypsis lutescens* (areca palm) frond.

The pupal case was collected and submitted to the PPD Laboratory where it was identified as A-rated *Thyridopteryx ephemeraeformis* (bagworm).

Once the pest was collected, another 50 plants were thoroughly inspected and released. Another 425 plants of other genera were inspected but no other finds were made. A notice of rejection was issued for violation of the California FAC [Section 6461.5](#) (reasonable cause).

Bagworm casing found on an Areca palm frond. Photo courtesy of Riverside County

Bagworm casing¹: “Bagworm caterpillars construct conical cases (or bags) around themselves and enlarge them as they grow. The cases consist of silk with attached bits of vegetation from the host shrub or tree. The larvae extend their head and thorax, including the legs, from the upper end of the bag while crawling about and feeding on the host plant.”

¹Barnes, J.K. (2007). *Thyridopteryx ephemeraeformis*. Anthropod Museum Notes, University of Arkansas, Division of Agriculture. Retrieved from <http://www.uark.edu/ua/arthemuse/bagworm.html>

Insect and Snow Peas From Guatemala at Winterhaven Station!

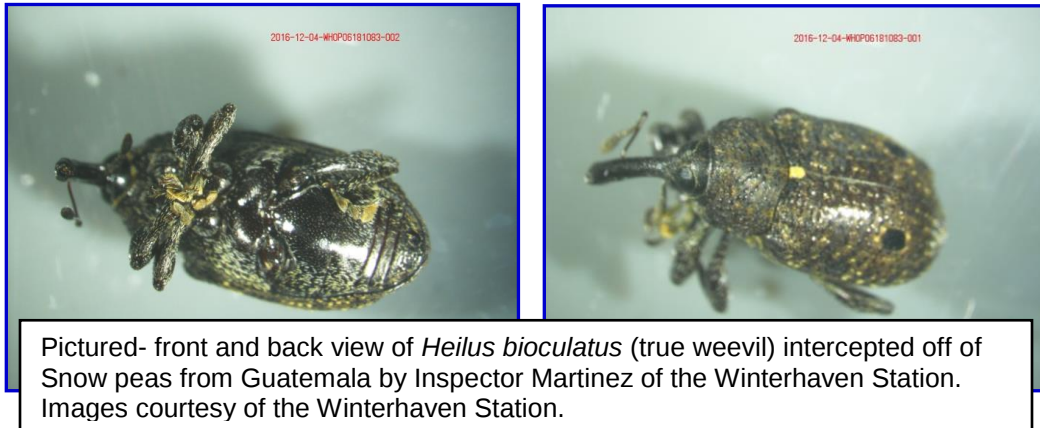

PDR: WH0P06181083

On December 4, 2016, a commercial shipment of snow peas from Florida entered the **Winterhaven Border Protection Station**. The shipment consisted of 40,000 pounds of snow peas that originated from Guatemala. The driver was directed to move the truck over to the secondary lane to check the shipment for the presence of pests. During the inspection, Inspector Jaime Martinez intercepted a live insect towards the back of the trailer.

As a result, a notice of rejection was issued for violating California FAC [Section 6461.5](#) (live pests). The specimen collected was submitted to the PPD Laboratory via digital imaging and tentatively identified as a Q-rated pest. Options were given to the driver who chose to return back out of state with rejected snow peas.

The following day, the driver re-entered California at the **Blythe Border Protection Station**. The driver was cooperative with the Blythe inspectors and declared to be carrying the rejected snow peas. Since the insect was only tentatively identified at Winterhaven, the driver opted to wait for a positive identification on the insect found.

The insect was sent rush delivery to the PPD Laboratory and was positively identified as Q-rated *Heilus bioculatus* (true weevil). The driver was then given options to fumigate the snow peas or return the shipment back out of state. He opted to return back out of state with the rejected snow peas. Before departing, he was given a warning to not re-enter California with the rejected shipment or he would be subject to citation.

Hungry Larva from Hawaii

PDR: 430P06135812

On December 2, 2016, a larva that had bored out of a Plumeria cutting was brought into the Santa Clara County Agricultural Commissioner's office. A resident had brought it in for identification after making the discovery in her cutting. The plant cutting was originally purchased in Kauai, Hawaii in what appeared to be an approved package for entrance into California. After boring its way through the plastic bag, the larva began to make its way inside the wood shelf on which the package was sitting on.

The pest was collected and sent to the PPD Laboratory where it was identified as Q-rated Cerambycidae (Plumeria borer). The cutting was destroyed and Hawaii was notified.

Pictured from left: Plumeria borer making its way through a wood shelf; Larva with pencil for size reference; and the boring hole left behind by the pest. Photos courtesy of Santa Clara County.
