

DATE: March 16, 2015

TO: All County Agricultural Commissioners

FROM: Plant Health and Pest Prevention Services

SUBJECT: **AQW Pest Report No. 06-2015**
Weekly AQW Report: For the week of February 5-11, 2015

Attached is the report for all A, Q and W pests intercepted or detected in California from February 5-11, 2015. Pests are identified by the California Department of Food and Agriculture's Plant Pest Diagnostics Laboratory.

San Diego County Interception-HR

PDR: 370P06228238

On February 2, 2015, while conducting a routine inspection of an incoming shipment of plants from Florida, San Diego County Inspectors Shady Hajjar and Kevin Porter intercepted several live pests on *Hyophorbe lagenicaulis* (bottle palm) from Tropical Connection Nursery. The shipment was properly certified and necessary acceptable certificates were present.

Pests intercepted on plants were submitted to the Plant Pest Diagnostics (PPD) Laboratory for identification and identified as A-rated *Ceroplastes rusci* (fig wax scale) and Q-rated *Ceroplastes* sp. (wax scale).

A notice of rejection was issued for violating California Food and Agricultural Code (FAC), [Section 6461.5](#) (live pests). The *Hyophorbe lagenicaulis* (bottle palms) will be released after treatment and re-inspection.

Fig Wax Scale: It was first discovered in Florida at several nursery and stock dealers in 1994 and 1995. In Florida, specimens of this scale have been identified on *Annona squamosa* (sugar apple), *Mimusops roxburghiana* (mimusops), *Phoenix roebelenii* (pygmy date palm), and *Ixora* spp.

The fig wax scale has also been reported as a pest of citrus in Italy (Talhouk 1975). Infrequent major local infestations in the citrus-growing areas of Italy have been controlled with refined petroleum oils (Barbagallo 1981).

Adult female fig wax scale, *Ceroplastes rusci*

More information about the fig wax scale:

Mighty Mites foiled at Meyers Station!

PDR: ME0P06314897

On December 28, 2014, tourists in a recreational vehicle (RV) from Austin, Texas arrived at the Meyers Border Protection Station greeted by Inspector Jerry Pluto. While inspecting the interior of the RV, Inspector Pluto intercepted one small mum plant located in the sink. Upon examining it, he noticed hundreds of small specks (moving) on it as well as small insect eggs hidden under the leaves of the plant.

The confiscated plant resulted in the interception and collection of dozens of tiny mites and corresponding eggs. The specimen collected were submitted to the PPD Laboratory and identified as Q-rated *Tetranychus* sp. (tetranychid mite).

The mum plant was in violation of the California FAC [Section 6461.5](#) (live insects). The plant was subsequently destroyed at the station.

The *Tetranychus* Genus is of the Tetranychidae Family, which are also referred to as Spider mites. These mites are classed as a type of arachnid, relatives of insects that also includes spiders, ticks, daddy-longlegs and scorpions. Spider mites are small and often difficult to see with the unaided eye. Their colors range from red and brown to yellow and green, depending on the species of spider mite and seasonal changes in their appearance. Spider mites are common plant pests. Symptoms of injury include flecking, discoloration (bronzing) and scorching of leaves. Injury can lead to leaf loss and even plant death.

Picture of intercepted mum plant, courtesy of the Meyers Border Protection Station! Notice the discolored unthrifty gray or bronze look to the plant
