

CDFA Dairy Marketing Haul Survey

A new format has been created to present milk hauling costs for milk movement in the State of California for Ranch-to-Plant, Plant-to-Plant, and Transportation Allowances Areas. This information was compiled by the Dairy Marketing Branch Cost of Production Unit with cooperation from both the Milk Pooling Branch and California processing plants. Milk hauling costs are collected and compiled twice a year for the months of April and October. This haul survey provides a comparison for the last four periods collected, October 2006, April 2007, October 2007, and March 2008. Due to the call of a hearing March 2008 haul information was collected to have the most current information available. The following paragraphs provide a brief description for each survey.

Hauling Rates for Ranch-to-Plant

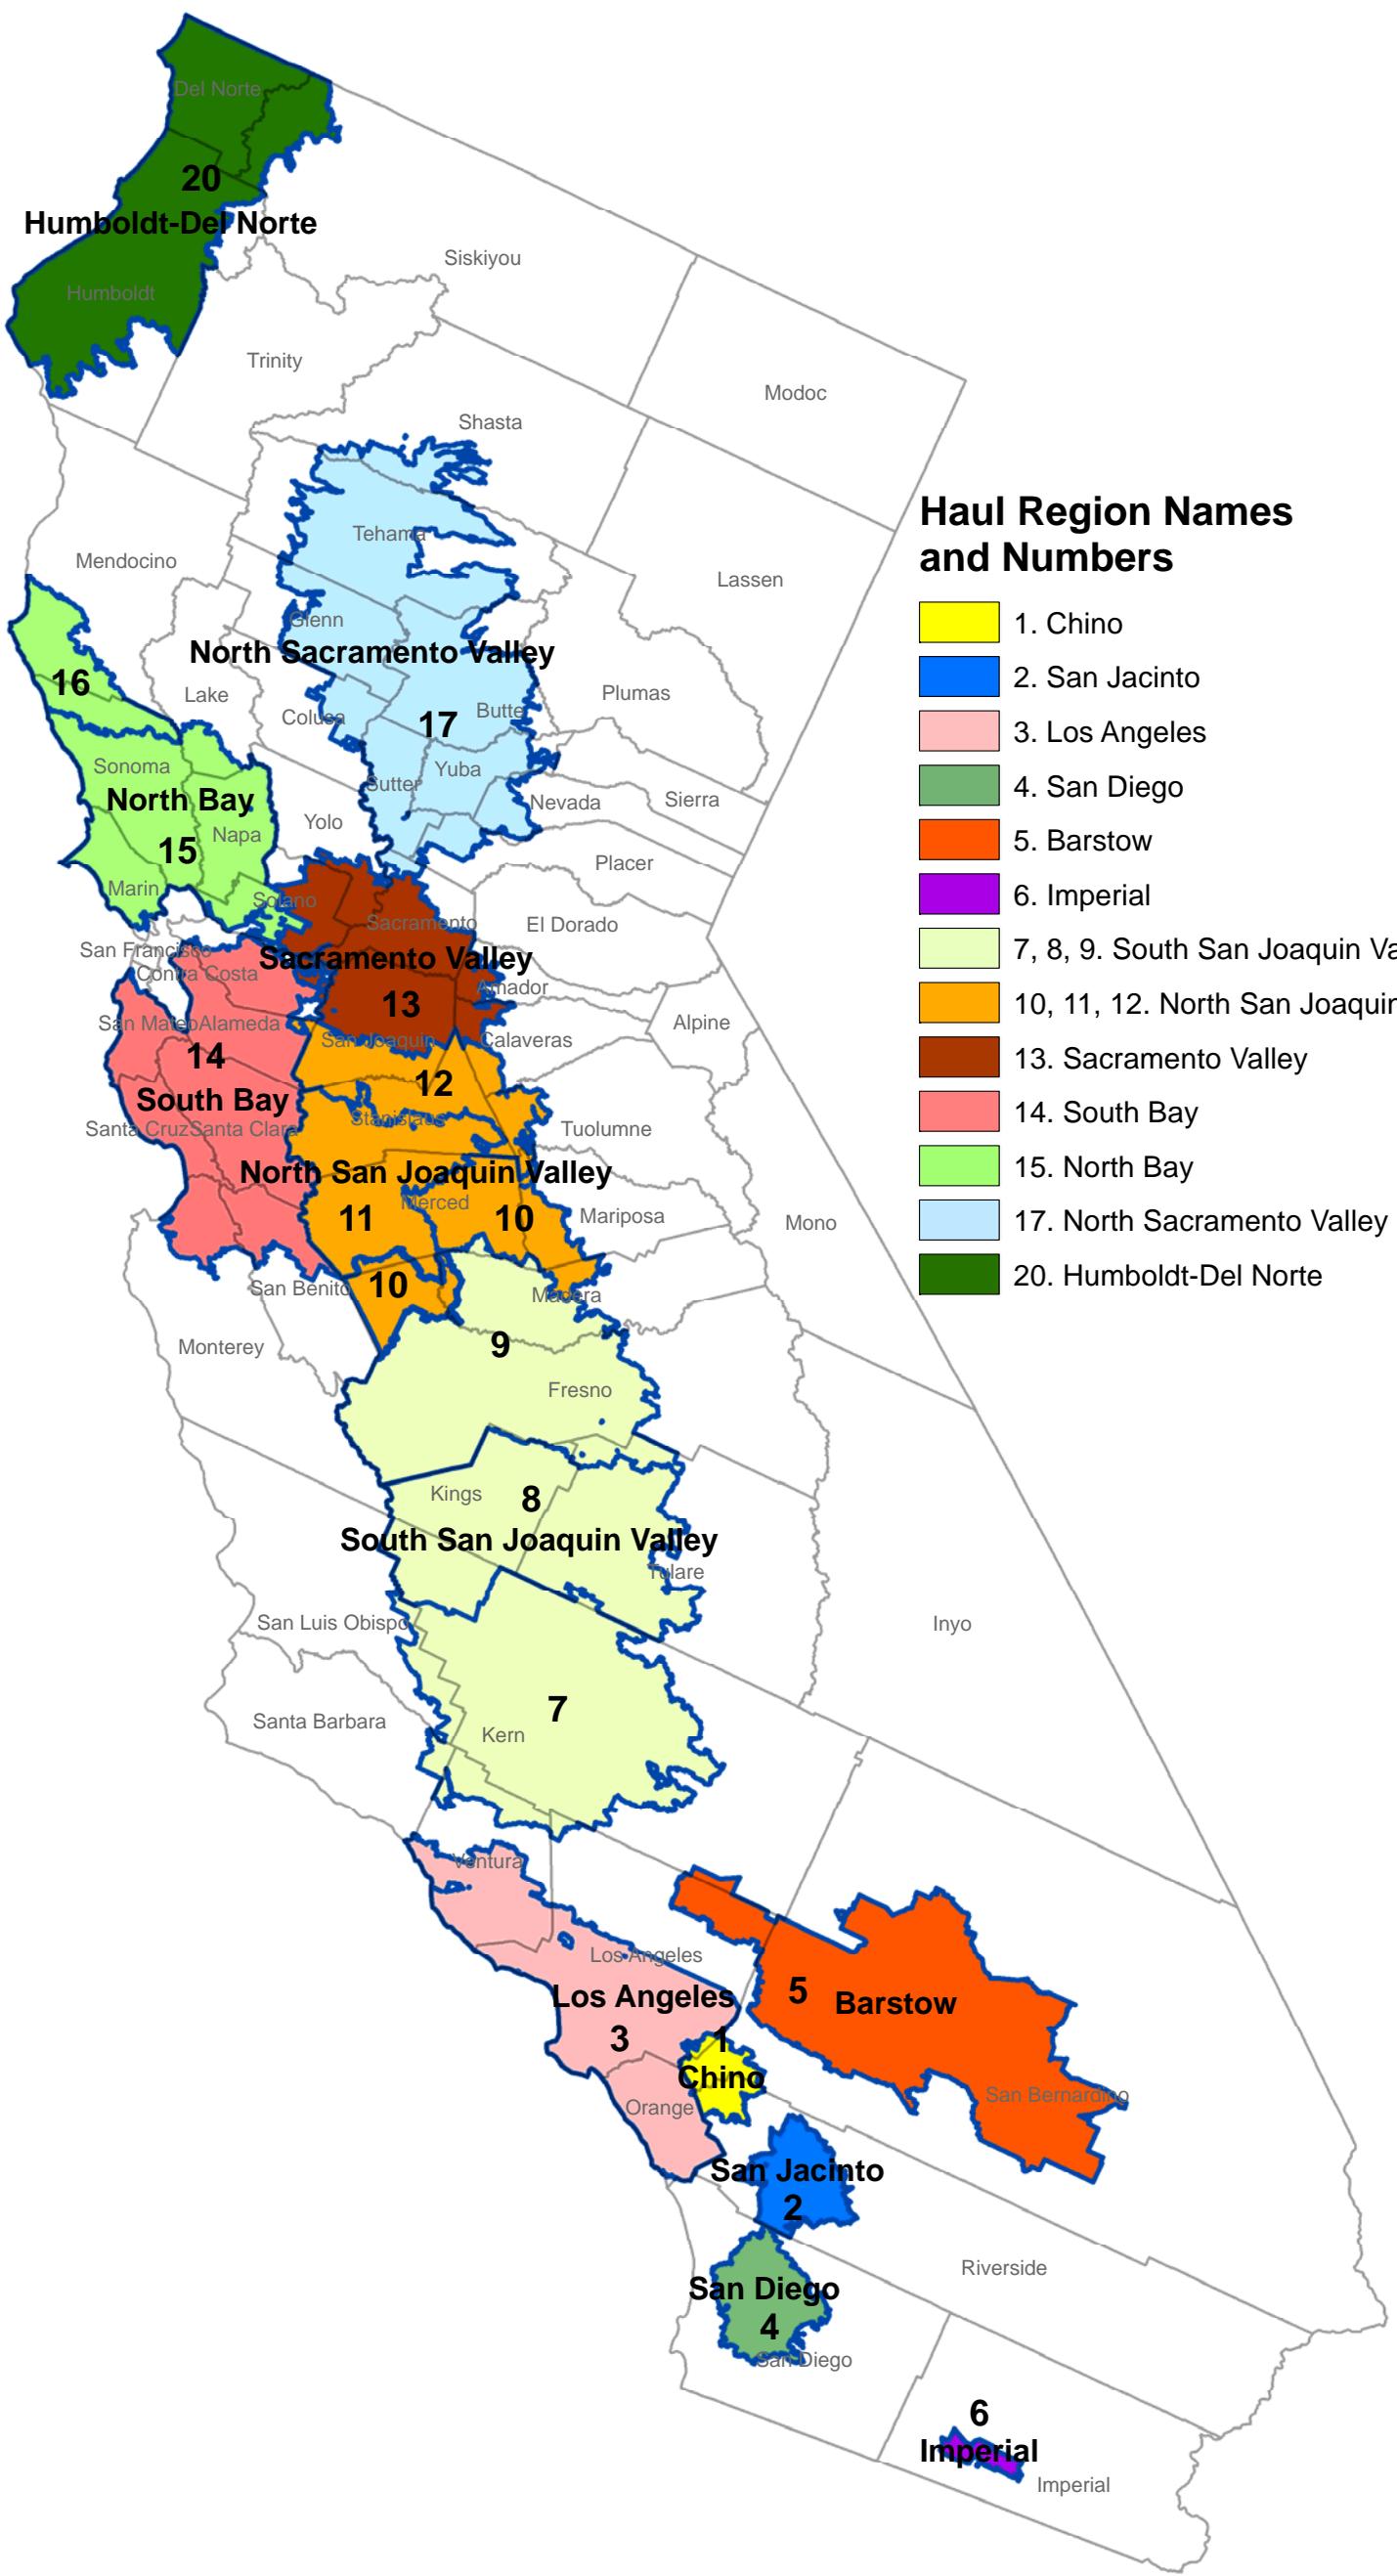

The California Ranch-to-Plant Hauling survey provides the geographic regions where milk is produced at the ranch (source) and the plant (destination) of first receipt. The regions are identified on the milk movement map by numerical numbers and the color-coded areas that correspond to the colors indicated on the ranch-to-plant spreadsheet. The survey targets milk moving from ranch-to-plant for select time periods, indicated on the spreadsheet. The published ranch-to-plant haul rates represent the cost to ship one hundred pounds of milk, including stop charges and surcharges. The survey provides the pounds of milk produced and shipped to various regions, with average miles traveled and a mileage range both based on a one-way destination from ranch-to-plant. The mileage is based on the PUC table utilized by milk pooling. It also provides the approximate number of tanker loads of milk based on 50,000 pound loads.

Hauling Rates for Plant-to-Plant

The California Plant-to-Plant Hauling survey provides the geographic regions where milk handlers of first receipt ship to plants of secondary receipt for fluid products. Fluid product haul charges generally are for whole milk, skim milk, condensed milk and cream, etc. The regions are identified on the milk movement map by numerical numbers and the color-coded areas that correspond to the colors indicated on the plant-to-plant spreadsheet. The survey targets milk moving from plant-to-plant for select time periods, indicated on the spreadsheet. The published plant-to-plant haul rates represent the cost to ship one hundred pounds of product based on cost-per-load or hundredweight price provided. The survey provides the pounds of milk products shipped between plant-to-plant to various regions, with average miles traveled based on a one-way destination. The mileage is based on the PUC table utilized by milk pooling. It also provides the approximate number of tanker loads of milk based on 50,000 pound loads.

Hauling Rates for Transportation Allowance Areas

The California Transportation Allowance spreadsheet breaks down the amount of milk that is produced at the ranch (source) and shipped to the plant (destination) of first receipt that are located within designated areas for Transportation Allowances. The Pooling Plan for Market Milk lists the following Transportation Allowance Receiving Areas: Bay Area, Sacramento, Shasta, North Bay, Southern California, and San Diego (see Pooling Plan for details on how milk qualifies for Transportation Allowances). The spreadsheet breaks down the pounds of milk shipped into the designated areas by mileage brackets and the current transportation allowances rates that correspond, which, are specified in the Pooling Plan for each designated area. It also breaks down the milk movement into mileage brackets in increments of 50 miles traveled into the designated regions, along with the average mileage traveled from ranch-to-plant. The published ranch-to-plant haul rates represent the cost to ship one hundred pounds of milk, including stop charges and surcharges. The mileage is based on the PUC table utilized by milk pooling. It also provides the approximate number of tanker loads of milk based on 50,000 pound loads. The designated Transportation Allowance area is broken down by counties and is slightly different than the areas used for the Ranch-to-Plant and Plant-to-Plant surveys. The designated regions on this survey are color-coded to match the milk movement map to provide a general idea where the designated Transportation Allowance areas are located.

Haul Region Names and Numbers

- 1. Chino
- 2. San Jacinto
- 3. Los Angeles
- 4. San Diego
- 5. Barstow
- 6. Imperial

1/ This haul survey provides the geographic area where milk is produced at ranch (source) and the plant (destination) of first receipt.
 2/ The approximate number of loads is calculated by taking total pounds shipped divided by 50,000 pounds.
 3/ The mileage range is the lowest and highest miles traveled from ranch-to-plant (one way destination).
 4/ The average miles traveled (based on PUC table) from ranch-to-plant (one way destination) is weighted on pounds shipped.
 5/ Haul rate includes flat charge (rate per cwt.), fuel surcharges, and stop charges.
 6/ This is the pounds of milk pooled compared to pounds captured in haul survey for the same time period.
 7/ Not published, but included in total.

SHASTA RECEIVING AREA:

For plants located in the Shasta receiving area, which consists of the county of Shasta:

No ranch to plant milk movement into Shasta receiving area.

1/ These are the transportation allowance areas defined in the Pool Plan.

2/ The current transportation allowances rates specified by the Pool Plan.

3/ The approximate number of loads is calculated by taking total pounds shipped divided by 50,000 pounds.

4/ The average miles traveled (based on PUC table) from ranch-to-plant (one way destination) is weighted on pounds shipped.

5/ Haul rate includes flat charge (rate per cwt.), fuel surcharges, and stop charges.

1/ This plant to plant haul survey provides the geographic area where milk handlers are located of first receipt and plants of secondary receipt. The haul charges are for whole milk, skim milk, condensed milk and cream, etc.
 2/ The approximate number of loads is calculated by taking total pounds shipped divided by 50,000 pounds.
 3/ The average miles traveled (based on PUC table) from ranch-to-plant (one way destination) is weighted on pounds shipped.
 4/ Haul rates are based on cost per load or per hundred pounds of product.
