Dry Roughage and Concentrate Costs California, 4th Quarter of 2010

Cost to Produce Milk In California, 2010

Overall, 2010 will show that the cost of production is down compared to the last two years. In 2010, most dairy producers experienced a lower cost of production and higher milk income compared to the prior year. The decrease in cost of production for 2010 is a result of lower feed costs for rolled corn and alfalfa hay.

In the fourth quarter of 2010, producers started to experience higher prices for rolled corn, alfalfa hay, and other feed ingredients.

The California Dairy Information Bulletin (ISSN-0892-4406) is published monthly as a cooperative effort of the California Department of Food and Agriculture Dairy Marketing and Milk Pooling Branches, and the USDA/NASS California Agricultural Statistics Service. In accordance with the California Government Code and ADA requirements, this publication can be made available in an alternative format by contacting Karen Dapper at (916) 341-5988, by email at dairy@cdfa.ca.gov, or contacting TDD 1-800-735-0193.

The Dairy Statistics Unit appreciates the cooperation of all dairy processors by filing monthly statistical reports with our office. These reports are carefully reviewed in an attempt to identify and correct any errors in reporting. All data is received directly from either California dairy processors or federal Milk Market Administrator offices in regions neighboring California. While data is submitted from reliable sources, no representation is made as to the complete accuracy of the data reported. Data is published subject to errors, revisions, or withdrawals without notice.
