Standard Features and Options

Primary weight indication and motion detection is provided by the compatible and certified weighing element.

Semi-automatic (push button) zero	Customer net weight/unit price/display
Price look-up (PLU) capability	Operator touch screen
Programmable tare with PLU	Software generated auxiliary weight display
Receipt printer	RS-232
AC power	Supports up to 20 terminals

Option: Pole-mount customer weight display
Screen saver/sleep mode
UPC hand-held scanner device

Minimum system requirements: Computer, monitor, keyboard, card reader, cash draw
Receipt printer, non-computing scale with customer display

Operating System:	Window XP Professional
Program Language:	We POS
Processor:	1.00 GHz, 512 MB RAM

This device was evaluated under the California Type Evaluation Program (CTEP) and was found to comply with the applicable requirements of California Code of Regulations for "Weighing and Measuring Devices." Evaluation results and device characteristics necessary for inspection and use in commerce are on the following pages.

Effective Date: January 28, 2010

Edmund E. Williams, Director

Action Systems Inc.
Point-of-Sale System
Model: Restaurant Manager

Application: Point-of-sale system interfaced with an approved and compatible non-computing scale.

Identification: The manufacturer's name, model and version number are continuously displayed on the header bar.

Sealing: The POS system does not require provisions for sealing and the source code is protected by the manufacturer. Provisions for sealing metrological parameters are provided on the certified and compatible scale.

Operation: The cash register is capable of accepting pricing information for both weighed and non-weighed items by touching the PLU item button on the screen.

Test Conditions: The model Restaurant Manager Version 17 was submitted and evaluated in the field, using a Weigh-Tronix model 6712-7 weighing element (Certificate of Approval 5095-00). The emphasis of the evaluation was on interaction of the software with the scale, the operation and features of the cash register, and receipt issued by the receipt printer. The system was tested in ounces with loads at near zero and near capacity. The system was also tested with the scale behind zero and in overload conditions. Several touch screen entries of weighed and non-weighed transactions were performed and several tickets were printed to verify POS receipt print format.

Type Evaluation Criteria Used: Title 4, California Code of Regulations, 2009 Edition
