

## Agricultural Statistical Review

### 2006 Overview

California agriculture saw a 4 percent drop in the sales value of its products in 2006. The state's 76,000 farms and ranches received \$31.4 billion for their output, down from the all-time high of \$32.8 billion reached during 2005. The state's agricultural sales first exceeded the \$30 billion mark in 2004, when \$30.9 billion in receipts was tallied.

Low milk prices experienced by California's dairy sector contributed to the drop in agricultural sales. Cash receipts for milk totaled \$4.49 billion, down 14 percent from \$5.22 billion in 2005. The price that producers received fell from \$13.92 to \$11.58 per hundred pounds of milk sold during the year. Despite the decline in revenue, milk remained California's No. 1 farm commodity, and the Golden State retained its ranking as the nation's leading dairy producer by a wide margin. California produced 21 percent of the U.S. milk supply in 2006, 23 percent of the cheese, 31 percent of

the butter, 50 percent of nonfat dry milk, and 15 percent of the ice cream. The state's dairy farms have increased their milk output every year since 1978; the 3.4 percent increase in overall output in 2006 continued this trend.

**California's Gross Cash Receipts, 2006**

**Milk Cash Receipts, 1997–2006**

**Almond Cash Receipts, 1997–2006**

Grape and almond growers also saw revenue declines during 2006 of 9 percent and 19 percent, respectively. Wine grape prices held firm, but there were fewer grapes to sell in 2006 compared with the huge 2005 crop. The size of the 2006 almond crop increased 22 percent to a record 1.15 billion pounds, causing prices during the first part of the marketing season to fall to \$1.87 per pound, from the final price of \$2.81 received for the 2005 crop.

California remained the No. 1 state in cash farm receipts in 2006, with its \$31.4 billion in revenue, representing 13.1 percent of the U.S. total. The state's farm revenues were more than the combined totals of No. 2 Texas and No. 3 Iowa.

California's agricultural abundance includes 400 different commodities. Among these, the state produces about half of U.S.-grown fruits, nuts and vegetables. Many crops are solely produced in California.

#### *Notable Increases in Cash Receipts:*

Apples.....	40%
Cabbage .....	25%
Celery.....	25%
Cherries, Sweet.....	47%
Grain, Sorghum.....	25%
Grapes, Table.....	23%
Lemons .....	37%
Lettuce, Leaf.....	29%
Lettuce, Romaine .....	41%
Potatoes, Summer.....	29%
Prunes .....	90%
Raspberries .....	24%
Tomatoes, Fresh .....	45%
Tomatoes, Processing .....	11%

California's Top 20 Commodities for 2004–2006						
Commodity	Value and Rank

Onions, Spring.....	35%
Oranges, Navel.....	36%
Oranges, Valencia .....	38%

**California Farm Facts**

The number of farms operated in California during 2006 was 76,000, less than 4 percent of the national total. The state was home to 10 percent of U.S. farms with sales of \$500,000 or more during the year. The average California farm or ranch operation produced \$413,000 in commodity sales during the year, more than 3 times higher than the U.S. average of \$114,000 per farm. In 2006, California's land devoted to farming and ranching totaled 26.1 million acres, down less than 0.5 percent from the previous year. The average farm size was 346 acres, compared with the U.S. average of 446 acres.

**California's Top Commodities**

California's top 20 crop and livestock commodities accounted for more than \$25 billion in value for 2006. Ten commodities exceeded \$1 billion in value. Avocados joined the top 20 list for 2006. Milk remained the No. 1 commodity in 2006, followed by grapes, and nursery and greenhouse products.

**Leading Counties**

California has some of the most agriculturally productive counties in the nation. According to the 2002 Census of Agriculture's ranking of market value of agricultural products sold, nine of the nation's top 10, and 12 of the top 20, producing counties are in California.

California's county agricultural commissioner reports showed a slight decrease of 0.9 percent in the value of their agricultural production for 2006. Fourteen counties reported a value of production in excess of \$1.01 billion. Fresno continued as the leading county with an agricultural production value of \$4.84 billion, an increase of 4.4 percent from the 2005 value. Tulare County was second in value of production with \$3.87 billion, 11.2 percent below 2005. Monterey had an increase of 4.3 percent in production with \$3.49 billion, moving the county to third in value. Kern's decrease of 2.1 percent to \$3.48 billion in agricultural production dropped the county to fourth in value.

**California's Top 10 Agricultural Counties**

County	Total Value and Rank				Leading Commodities
	\$1,000				
	2005		2006		
Fresno	4,640,166	(1)	4,843,392	(1)	Grapes, Almonds, Tomatoes, Poultry, Cattle and Calves
Tulare	4,360,854	(2)	3,870,843	(2)	Milk, All Oranges, Cattle and Calves, Grapes, Alfalfa Hay and Silage
Monterey	3,346,955	(4)	3,489,923	(3)	Leaf Lettuce, Head Lettuce, Strawberries, Nursery, Broccoli
Kern	3,550,713	(3)	3,476,801	(4)	Almonds and Byproducts, All Grapes, Milk, All Carrots, All Citrus

Imperial	1,286,066	(10)	1,307,615	(10)	Cattle, Alfalfa Hay, Carrots, Leaf Lettuce, Head Lettuce

## Weather Highlights for 2006

January began with a sequence of dynamic Pacific storm systems, which brought heavy rain to Northern and Southern California. The abundance of rain caused flooding in some fields and delayed planting dates. Heavy rainfall caused increased spraying of herbicides. However, the rain was highly favorable for several grain crops. Later in the month, there was a high-pressure ridge over the West Coast, which brought dry and mild weather. As a consequence of the high-pressure, there were cooler temperatures and dry conditions. Fieldwork finally resumed, but not in places where water was standing.

Dry and unseasonably warm weather conditions persisted from the end of January, while February weather was variable. A cold front moved over Northern California bringing showers to the mountains. Daytime highs in the Central Valley and Southern California dropped 20 to 25 degrees.

Ample soil moisture and modest temperatures created outstanding growing conditions. Fieldwork continued in preparation for spring planting.

March and April brought a substantial amount of precipitation. Mild temperatures and a large quantity of rainfall prompted fruit and nut crops to bloom.

A wet weather pattern persisted at the beginning of April. There were strong Pacific storm systems that moved across the West Coast, which resulted in a considerable amount of rain and mountain snow in Northern California. Nectarines, other stone fruits and apricots were being thinned. Harvesting of all citrus fruit resumed after being halted due to wet soil and rainy conditions. However, alfalfa cuttings were damaged by precipitation, and cotton and rice plantings were delayed by the wet conditions. Planting resumed as the fields dried out.

High pressure across the state in early May led to sunny skies and very warm conditions. A storm system associated with a Pacific low brought showers and cool air into Northern and Southern California. Modest high-pressure ridges persisted for the remainder of May causing warm and dry conditions for the state as temperatures reached normal. Hot and dry weather boosted field crop growth and caused small grains to dry.

**Top 5 Agricultural States in Cash Receipts, 2006**

State	Rank	Total Value <i>Billion Dollars</i>
California	1	31.4
Texas	2	16.0
Iowa	3	15.1
Nebraska	4	12.0
Kansas	5	10.3

**Crop and Livestock Commodities in which California Leads the Nation**

<b>Almonds</b>	Dates	Lettuce, Leaf	Pistachios
Apricots	Eggplant	Lettuce, Romaine	Plums
<b>Artichokes</b>	Escarole/Endive	Melons, Cantaloupe	<b>Plums, Dried</b>
Asparagus	<b>Figs</b>	Melons, Honeydew	<b>Pomegranates</b>

Daikon	Lettuce, Head	Pigeons and Squabs	

*California is the sole producer (99 percent or more) of the commodities in bold.*

Photo by Ed Williams / Sacramento County

Temperatures in June were unstable with influence from both high- and low-pressure systems. Patterns of low pressure brought cooler temperatures and minimal precipitation. The need for irrigation increased as a high-pressure system brought hot weather. Hay drying conditions were improved with warm temperatures.

July began with cooler than normal temperatures due to a low-pressure trough. Later, heat waves swept across California. Record-setting temperatures damaged crops and caused the deaths of substantial numbers of livestock and poultry. Subtropical moisture circulated around the high-pressure system and increased humidity, with unusually warm overnight temperatures.

High-pressure systems continued through the first couple weeks of August. Moisture began circulating due to a low-pressure system that caused thunderstorm activity. A low-pressure system generated heavy showers and temperatures became cooler than normal. Livestock were moved to irrigated pastures and dry foothill pastures. Some livestock received protein and other supplements as hot weather decreased forage quantities. Cotton, corn and beans progressed well with the moderate temperatures.

September was mainly dry. A fall-like pattern set up over California with an upper-level high-pressure ridge. Very dry air and dry grasses signaled high fire dangers across much of the state that led to red flag warnings in some areas.

Weather in October displayed typical dry and mild fall patterns. An upper-level, high-pressure system was centered over the four-corner region that caused some light rain in the northern and central coast. For interior portions of Southern California, including the Imperial Valley, temperatures were below normal. A series of cold fronts passed through the state, but the only effect was cooler temperatures with no significant precipitation.

The first active storm system began in November and shifted southward from the Pacific Northwest, bringing the first significant snow of the season. There was steady precipitation in the northern Central Valley and also in the mountains of Northern California. A series of weak Pacific frontal systems passed through the Pacific Northwest and brought occasional showers and cooler temperatures to California.

December began with a cold front that caused wet weather across California. A series of Pacific weather systems brought showers and cool temperatures with widespread freezing across the interior valleys of Northern California and the Central Valley. At the end of December, another Pacific storm system approached Northern California spreading showers and cooler temperatures across the northern coast, while Southern California remained dry and warm. Ranges and pastures were in better condition as result of the rain.

California's Top 20 Agricultural Exports, 2005 – 2006 <sup>1</sup>

Commodity	Rank	2005 Export Value \$1,000	2006 Export Value \$1,000	Percent Change

<sup>1</sup> See page 126 for complete table and footnotes.

## Global Marketplace

California's agricultural exports reached another new record with nearly \$9.8 billion in 2006. This represents a 5 percent increase from 2005. In 2006, 24 percent of California's agricultural production was shipped to overseas markets.

California exports agricultural products to more than 150 countries. The top 10 export destinations account for 85 percent of the 2006 export value of the 48 commodities for which there is accurate export destination data. The top three destinations—European Union (EU-25), Canada and Japan—account for nearly 60 percent of the 48-commodity total.

The top 55 export commodities account for \$8.3 billion or 85 percent of total exports while the remaining 15 percent were associated with other products and mixtures. Wine export values increased 28 percent from 2005 to an all-time high of nearly \$736 million. The export price of wine increased 21 percent from 2005 and accounted for the majority of the increase in export value.

From these impressive export gains, it is easy to see that California agriculture is enjoyed around the world.

## California's Top 10 Agricultural Export Markets, 2006

Rank	Country	Export Value Million Dollars	Leading Exports
1	European Union-25	2,071	Almonds, Wine, Pistachios
2	Canada	1,879	Lettuce, Strawberries, Processed Tomatoes

<sup>1</sup> Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

<sup>2</sup> A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

<sup>1</sup> Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

<sup>2</sup> Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

<sup>3</sup> Based on values published in the county agricultural commissioners' annual crop reports.

<sup>4</sup> Share of U.S. production based on 2002 Census of Agriculture.

<sup>5</sup> The 2006 price and value are based on the 2005 California average price.

<sup>6</sup> Extracted from county agricultural commissioners' annual crop reports.

<sup>7</sup> Includes sunflower, safflower and canola.

<sup>8</sup> Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

<sup>9</sup> Includes cut flowers, potted plants, foliage plants, bedding plants and indoor decoratives.

## County Statistical Data

California's counties reported a slight decrease of 0.9 percent in the value of their agricultural production for 2006. Fourteen counties reported a value of production in excess of \$1.01 billion. Fresno continued as the leading county with an agricultural production value of \$4.84 billion, an increase of 4.4 percent from the 2005 value. Tulare County was second in value of production with \$3.87 billion, 11.2 percent below 2005. Monterey had an increase of 4.3 percent in production to \$3.49 billion, moving the county to third in value. Kern's decrease of 2.1 percent to \$3.48 billion in agricultural production dropped the county to fourth in value.

### Notes to the County Data

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm where produced. Values placed on pasture and range feed are included, and fresh fruit and vegetable crop values are based on the free-on-board (f.o.b.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The county agricultural commissioners' reports also provide statistics on a broader range of commodities than estimates prepared by other agencies.

Because of these concepts, the state total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service,

#### Notable Changes in County Ranks and Percentages of the State Total, 2006

Rank	Commodity	Changes in County Rankings
1	Milk and Cream	Tulare leads with more than 26 percent of the State total
2	Grapes, All	Fresno leads, followed closely by Kern and Napa
3	Nursery Products	San Diego continues to lead with more than 18 percent of the total
4	Cattle and Calves	Tulare is number one, followed by Stanislaus and Imperial
5	Almonds	Fresno leads with 19 percent, followed by Kern
6	Lettuce	Monterey still leads with 65 percent of the State total
7	Strawberries	Monterey and Ventura lead with more than 60 percent of the total
8	Oranges	Tulare leads with more than half of the total
9	Alfalfa Hay	Kern leads the way, followed by Tulare and Imperial
10	Chickens	Merced and Stanislaus lead the State with more than 56 percent
11	Flowers and Foliage	San Diego has more than 51 percent of the total
12	Walnuts, English	San Joaquin leads, followed closely by Tulare and Stanislaus
13	Tomatoes, Processing	Fresno leads with nearly 39 percent, followed by San Joaquin and Yolo
14	Cotton	Fresno still leads with 34 percent, followed by Kings
15	Rice (Excl. seed)	Colusa leads with more than 28 percent, followed by Butte

California Field Office. The larger total value reported by the agricultural commissioners results from different definitions used in estimating total value of production rather than cash receipts to producers.

Some counties now include timber as a part of their crop report, following the pattern set by the County Agricultural Commissioners and Sealers Association. Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. Total value reported by the counties, including timber, is 0.2 percent more than the \$38.3 billion recorded in the table "County Rank by Gross Value of Agricultural Production, 2005-2006" on page 34.

### California Timber Industry

California has more forestland than any state except Alaska. Nearly two billion board feet (equivalent to 132,000 homes) of commercial lumber are produced from California's private and public timberlands each year, making the Golden State the third largest

producer of wood products in the nation. California's abundant forests could provide nearly 100 percent of the state's demand for wood.

### County Agricultural Commissioners' Reports

Copies of individual county agricultural commissioners' reports may be requested directly from each County Agricultural Commissioner's Office. For your convenience, a listing of offices is included in the phone directory section of this publication. Many of the counties also publish these reports on their Web sites. USDA's National Agricultural Statistics Service, California Field Office publications are also available free-of-charge at [www.nass.usda.gov/ca](http://www.nass.usda.gov/ca).

10	—	—

<sup>1</sup> The data rankings were extracted from county agricultural commissioners' reports where published. Those not ranked by the counties were ranked by USDA's National Agricultural Statistics Service, California Field Office. Timber was omitted in rankings. Trinity County Agricultural Commissioner's Report was not available at publication. The last year available (2003) was used for this report.

Commodity Rank and Leading Counties by Gross Value of Agricultural Production, 2006 <sup>1</sup>
