2020 Alternative Manure Management Program

The CDFA Alternative Manure Management Program is funded by California Climate Investments

Request for Grant Applications

Release Date: February 3, 2020
Applications Due: March 27, 2020 by 5:00 p.m. PT
*April 27, 2020 by 5:00 p.m. PT
*The deadline has extended to allow for COVID – 19 limitations

Late submissions will not be accepted.

About the Program

Purpose
The California Department of Food and Agriculture’s (CDFA) Alternative Manure Management Program (AMMP) awards competitive grants to California dairy and livestock operations for technologies and specific management practices that result in long-term methane emission reductions and maximize environmental benefits.

Funding and Duration
The Budget Act of 2019 (AB 74, Chapter 23) appropriated $34 million from the Greenhouse Gas Reduction Fund (GGRF) to CDFA for early and extra methane emissions reductions from dairy and livestock operations. CDFA will make $6.1 to $10.7 million (20-35% of $30.6 million) available for the AMMP. The Dairy Digester Research and Development Program (DDRDP) will receive $19.9 to 24.5 million to support digesters that reduce methane emissions from dairy operations. A range of award amount is included to ensure encumbrance of funds in each program by high-quality projects that will result in verifiable and quantifiable GHG reductions.

- CDFA will fund up to 100% of the total project cost with a maximum grant award of $750,000 per project. Matching funds are strongly encouraged. See Cost Share for more details.
- The maximum project term is two (2) years.
- Grant funds cannot be expended before January 1, 2021 or after December 31, 2022.
- CDFA may offer an award different than the amount requested.

Eligibility and Exclusions
The project site must be located on a commercial California dairy or livestock operation.

- A dairy operation is defined as an entity that operates a dairy herd, which produces milk or cream commercially, and whose bulk milk or bulk cream is received or handled by any distributor, manufacturer, or any nonprofit cooperative association of dairy producers.
- A livestock operation is defined as an entity raising farm animals such as cattle, poultry, goats, sheep, swine and horses.
AMMP supports several project types for which there are methods to quantify GHG emission reductions. To be eligible, the current baseline manure management practices must include the anaerobic decomposition of volatile solids stored in a lagoon or other predominantly liquid anaerobic environment. Methane is produced when volatile manure solids are stored in wet, anaerobic conditions; consequently, conditions that lead to methane production must currently exist at a dairy or livestock operation in order for methane emission reductions to be achieved through an AMMP project.

While solid separation or conversion from flush to dry scrape manure collection can be a critical component an AMMP project, these practices are not considered to be stand-alone projects because they relate only to how manure is separated or collected. In order to calculate GHG emissions and emission reductions, it is also necessary to identify how the separated or collected manure volatile solids will be treated and/or stored (e.g. open solar drying, composting in vessel). Storage or further treatment will always take place with separated or collected solids, and applicants are required to identify what this will be. The storage or further treatment of the collected solids produces methane to varying degrees, as determined by the Methane Conversion Factor (MCF) for each practice. Applicants should use the definitions provided above to determine which practice most closely describes how they will manage separated or scraped manure volatile solids. If an applicant’s treatment/storage practices do not exactly match the definition of a listed practice, they will identify the most closely related practice. An applicant may submit multiple grant applications; however, each grant application must represent an individual project at a unique project site (i.e., dairy or livestock operation).

Each AMMP project requesting GGRF funding must include at least one of the following project components that reduce baseline methane emissions.

1. **Pasture-based management** including (i) conversion of a non-pasture dairy or livestock operation to pasture-based management and/or (ii) increasing the amount of time livestock spend at pasture at an existing pasture operation.
   
   **Note:** All pasture-based management projects must currently manage/store some manure in anaerobic conditions and introduce new practices that reduce the quantity of manure managed under such conditions.

2. **Alternative manure treatment and storage** practices including:
   a) Installation of a **compost bedded pack barn** that composts manure in situ; or
   b) Installation of **slatted floor pit storage manure collection** that must be cleaned out at least monthly.
3. **Solid separation** of manure solids prior to entry into a wet/anaerobic environment (e.g. lagoon, settling pond, settling basin) at a dairy or livestock operation in conjunction with one of the manure treatment and/or drying practices provided below. Eligible solid separation technologies include:
   a) **Weeping Wall** (system must have a minimum of at least two cells)
   b) **Stationary Screen**
   c) **Vibrating Screen**
   d) **Screw Press**
   e) **Centrifuge**
   f) **Roller Drum**
   g) **Belt Press/Screen**

   **Note:** Either the installation of a new solid separation system at a dairy or livestock operation that does not currently employ solid separation, or the installation of a new solid separation system with significantly higher separation efficiency than the existing solid separation technology may be eligible.

4. **Conversion from a flush to scrape** manure collection system in conjunction with one of the manure treatment and/or drying practices provided below.

**Manure Treatment and/ or Storage Practices:**

   a) **Open solar drying** of manure (manure is dried in a paved or unpaved open confinement area without any significant vegetative cover where accumulating manure may be removed periodically);
   b) **Closed solar drying** (drying of manure in enclosed environment);
   c) **Forced evaporation with natural-gas fueled dryers**;
   d) **Daily spread** (manure is routinely removed from a confinement facility and is applied to cropland or pasture within 24 hours of excretion);
   e) **Solid Storage** (storage of manure, typically for a period of several months, in unconfined piles or stacks);
   f) **Composting in vessel** (composting in an enclosed vessel, with forced aeration and continuous mixing);
   g) **Composting in aerated static pile** (composting in piles with forced aeration but no mixing);
   h) **Composting in intensive windrows** (with regular turning for mixing and aeration);
   i) **Composting in passive windrows** (with infrequent turning for mixing and aeration).
Each dairy or livestock operation must submit individual applications to develop centralized projects (for example, a centralized composting facility), known as a “cluster” or “hub and spoke” project. Costs associated with the centralized composting facility must be apportioned to each dairy or livestock operation participating in the project. It is possible that not all proposals for a cluster or hub and spoke project will be selected for funding. Applicants are strongly encouraged to ensure that such a project will still be feasible if only partially funded. The appropriate location of the centralized facility can be determined by participating dairy operations.

Dairy and livestock operations with existing non-DDRDP funded digesters may apply for AMMP funds to reduce methane emissions from manure not being treated in the digester system.

AMMP funds can only be used to implement management practices that reduce methane from manure and cannot be used to treat manure digestate, i.e., digested manure material resulting from an anaerobic digestion process.

Dairy and livestock operations that do not currently have a digester in place will be prioritized during the AMMP review process.

Once a project is awarded funds, the project may not:

- Change or alter the proposed manure management practice to be implemented since it changes the GHG estimates
- Change herd size beyond the dairy’s existing permits during the project term
- In the event the grantee enters into negotiations for the sale of the dairy or livestock operation for which a grant was awarded, the grantee shall disclose said negotiations to the CDFA immediately. The grant shall not be assigned to the purchaser, unless approved by the CDFA pursuant to any/all terms and conditions the CDFA deems necessary. Should the grantee or purchaser refuse to comply with the terms and conditions set forth by the CDFA or the grantee sells the dairy livestock operation that was the subject of the grant award without approval from the CDFA, the grantee shall return all grant monies to the CDFA immediately.

AMMP grant funds cannot be used for the following:

- Projects on dairy or livestock operations that propose to switch existing management practices to those that increase baseline GHG emissions (e.g., from dry scrape to flush lagoon systems).
- Repair existing defunct or non-functioning equipment.
- Duplicate equipment or activities that will receive funding from a different state or federal funding source.
- Installation of a biogas control system (digester).
• Operations that have already installed, or plan to install an anaerobic digester system funded by CDFA’s Dairy Digester Research and Development Program (DDRDP) or operations that previously received AMMP funding.

Requirements and Limitations

Program Requirements
The AMMP will support the adoption of alternative (non-digester) manure management practices on California dairy and livestock operations that result in permanent, annual, and measurable GHG emission reductions.

• Grant recipients will be required to submit annual status reports to CDFA explaining in detail the project’s progress.
• Recipients must also annually report data to CDFA regarding their manure management practices for five years after the end of the project term or until the practice becomes operational.

California Environmental Quality Act and Permits
CDFA intends to fund proposals that demonstrate project readiness based on evidence that applicants are prepared to promptly begin project implementation. Evidence includes,
but is not limited to, a list of permits already obtained and details of the process required to obtain remaining permits clearly outlined in the Application Questionnaire.

If awarded, grant recipients are expected to comply with the California Environmental Quality Act (CEQA) and all applicable permitting within six (6) months of the execution of the grant agreement. CEQA and permit compliance requirements vary depending on project type and location. If environmental impacts of the project are deemed insignificant by the lead agency (in most cases the county), an initial environmental study and negative declaration may satisfy CEQA requirements. Applicants are advised to check with their local county and city planning commissions for CEQA and conditional use permit requirements which will need to be satisfied within six (6) months of the execution of the grant agreement.

CalGold, an on-line tool for permit assistance provided by the Governor’s Office of Business and Economic Development may be a useful resource. Visit www.calgold.ca.gov for more information.

**Project Technology**
Projects must use commercially available technologies. *Commercially available technologies* are those having a proven operating history specific to the grant application. Such a system is based on established design and installation procedures and practices. Please refer to Key Terms and Definitions ([Appendix D](#)) for a detailed definition of "commercially available" as applicable to this program.

AMMP grant funds **cannot** be used for new technology development or research purposes. *Pre-commercial technologies* are defined as new technologies or enhancements of existing technologies that are not commercially available.

Projects may propose to include nutrient management technologies in conjunction with methane reduction technologies. However, implementation of standalone nutrient management technology to an existing manure management practice is not eligible. Projects can be reimbursed for equipment and implementation costs of the nutrient management technology.

**Greenhouse Gas Emission Reduction Calculations**
Applicants are required to use the latest “Quantification Methodology for the California Department of Food and Agriculture Alternative Manure Management Program” and associated “Benefits Calculator Tool for the Alternative Manure Management Program” (hereafter referred to as Quantification Methodology and Benefits Calculator Tool, respectively) developed by the California Air Resources Board (CARB). The quantification
methodology and calculator are available on CARB’s website at www.arb.ca.gov/cci-resources.

This Quantification Methodology and Benefits Calculator Tool were developed specifically for the AMMP and are adapted from the CARB Compliance Offset Protocol – Livestock Projects (2014) with some modifications to allow for the calculation of anticipated net GHG reductions of an AMMP project prior to implementation. Technologies not supported in the CARB Benefits Calculator Tool will not be funded.

Applicants are required to provide GHG calculations in the following five formats: (1) total project emission reductions over 5 years; (2) GHG reduction per unit of energy-corrected milk (ECM) produced by the dairy operation over 5 years (dairy applicants only); (3) GHG reduction per animal produced by the operation over 5 years; (4) GHG reduction per dollar AMMP grant money requested over 5 years; and (5) GHG reduction per dollar total GGRF grant money requested over 5 years.

**Cost Share**

Cost share, including matching funds and in-kind contributions, is not required; however, cost share is encouraged and may serve as evidence to demonstrate industry commitment to, or support for, the project. Grant recipients must report matching funds contributed to the project and ability to commence work while waiting for grant payments in arrears.

*Matching funds* are a portion of project costs not borne by the GGRF. Matching contributions include allowable costs incurred that are directly related to the implementation of the non-alternative manure management practices (i.e., supplies and materials, equipment, and contractor/consultant fees, and other associated project costs). Other State of Federal grants may serve as matching funds.

*In-kind contributions* are donated goods or services for which fees would ordinarily be paid or provided to the applicant at no cash cost. Donated goods and services must be necessary to the project to be considered in-kind (i.e., goods/services would be otherwise purchased if not donated). For professional donated services, the professional donating the service must be licensed to work in that profession and value their service at the same rate at which an ordinary professional with the same expertise and training would charge for the same or similar service. Applicants must provide the contribution source, type, and amount of all contributions in support of the project.
**Allowable Costs**

Project costs must clearly support the implementation of the non-digester manure management practice(s) and nutrient management technologies, including, but not limited to:

*Supplies:* Supplies and materials are items with an acquisition cost less than $5,000 per unit and have a useful life of less than one year.

*Equipment:* Equipment is an article of nonexpendable, tangible personal property and has a useful life of more than one year, and a purchase cost which equals or exceeds $5,000 per unit.

*Contractor:* Contractor cost are limited to labor to install the project. Contractor cost must be for a specific and identifiable service that is directly related to project implementation. Contractor and labor costs must not exceed 25% of total amount requested.

*Design and engineering:* Design, engineering, and consulting costs specifically related to the implementation of the proposed manure management practice(s) incurred during the grant agreement term. Design, engineering, and consulting costs must not exceed 5% of the total amount requested.

*Other Costs:* Other direct costs and expenses for implementing the project not covered in any of the previous categories.

*NOTE:* Compensation for contractor/design and engineering fees must be reasonable and consistent with fees in the marketplace for the same or similar services.

**Unallowable Costs**

Unallowable cost includes but are not limited to:

- Cost incurred outside grant agreement term.
- Costs for repairs and spare parts.
- Pre-development costs, including, but not limited to: application preparation, permits, project designs, and any other activities that contributed to a project’s readiness.
- Costs associated with environmental review required for project permits, including preparation of Environmental Impact Reports.
- Costs associated with the five years of post-project reporting.
- Costs associated with purchasing general purpose equipment (e.g., tractors, loaders, etc.) that will be used for non-manure management practices/activities.
- Non-labor cost (e.g., management) and fees associated with project oversight and
coordination.

- Consulting fees not directly related to project implementation
- Cost covered by another State of Federal grant program.
- Cost associated with purchasing or leasing land or buildings.
- General costs associated with grant management (e.g., Invoicing, reporting, oversight, ordering equipment).
- Costs associated with travel (e.g., hotels, flights, per diem, etc.)
- Purchase of dairy manure (tipping fees) or other feedstocks.
How to Apply

Applicants will be required to complete and submit their grant applications online using an electronic application submission platform, available here.

Applicants may review the application questions and required documents to be attached in the Application Questionnaire Preview. Applicants are encouraged to gather all required information prior to final submission to facilitate effective and timely submission of the grant application.

Questions marked with an asterisk (*) require a mandatory response. Applicants will not be able to submit the application without responding to mandatory questions. Applicants can save the application as draft and complete at a later time. Submitted applications can be edited prior to the due date. Once the due date has passed, applicant will not be able to edit or recall an application.

If you have any technical difficulties with the application, please send an email to cdfa.oefi_ammp_tech@cdfa.ca.gov and include your 8 digit application ID number in the subject line.
Grant Application Questions and Attachments

Attachments must be submitted in Arial font size 12, with one (1) inch margins, and page numbers should be on bottom right corner. Attachments listed as single PDF files (supporting documents, letters of support, design plans, etc.) have no page limit.

All attachments must include the 8-digit Application Identification number, automatically assigned to you by the application portal in the top left corner.

Application Sections

1. Project Plan and Long-Term Viability

   Attachment 1: Project Narrative Template (required)
   The Project Narrative should include the history and background, herd information, the eligible project type to be used in the proposal, whether site is owned or leased, sustainability of the project, and long-term operations, and maintenance plans. For projects that are part of a larger cluster (e.g. centralized composting facility), include a detailed plan for the entire cluster, including a feasibility analysis indicating the minimum number of projects critical to the economic and technical viability of the cluster.

   Complete and upload the Project Narrative Template as a Word document.
   In addition to the Project Narrative Template, include the following supporting materials (no template provided):
   • Attachment 1.1: Site plan, project design documents, cluster maps and schematic diagrams. Upload as a single PDF file; no total page limit (if applicable).
   • Attachment 1.2: Letter of Agreement from landowner (if applicable). Upload as a single PDF file; no total page limit.

   Attachment 2: Work Plan Template (required)
   The Work Plan must clearly and concisely describe the tasks and activities required to accomplish goals/objectives in the proposed Project Narrative. It must identify measurable targets and timelines and include an evaluation component to measure the success of the project and determine whether the project objectives were accomplished.

   Complete and upload the Work Plan Template as a Word document.
2. Budget and Financials

Attachment 3: Budget Worksheet Template (required)
Applicants must provide a clear accounting of costs, work hours, and equipment associated with all activities necessary to complete the project. Applicants must identify AMMP funds requested, the source and amount of matching (cash) funds, in-kind contributions, State and Federal funds, and all other funding sources necessary to complete the project.

Complete and upload the Budget Worksheet Template as an Excel spreadsheet.

In addition to the Budget Worksheet Template, include the following supporting materials (no template provided):

- **Attachment 3.1:** Bids, quotes, or estimates to support budget costs. Applicants are encouraged to obtain multiple estimates to ensure costs are reasonable and consistent with the market rate.

Attachment 4: Financials (required)
There is no template to complete for Financials; however, applicants must attach one or more of the following documents to demonstrate the organization’s financial strength (for partnerships, information from all partners is required):

- Independent CPA Audits, Reviews or Compilations of financial statements,
- Most recent tax returns and accompanying schedules,
- Project financing letter from a bank,
- If an independent CPA report is not available, recent and comparative organizational income (profit/loss) statements, bank accounts, or balance sheets (preferably - third party prepared),
- For corporations only – articles of incorporation, current operating agreements.

*Note: Project partners must not have filed for bankruptcy in the past five years.*

Upload as a single PDF file; no total page limit.

3. Estimated GHG Emissions Reduction and environmental benefits

Attachment 5: Benefits Calculator Tool (required)
Estimate the project’s GHG emissions reduction and environmental benefits with the Benefits Calculator Tool template.

Complete and upload the Benefits Calculator Tool as an Excel spreadsheet.
In addition to the completed Benefits Calculator Tool, include the following supporting materials:

- **Attachment 5.1**: Explanation of Assumptions for GHG Calculations (if applicable; e.g. supporting documentation for use of non-default factors).

4. **Project Readiness**

To assist applicants with CEQA and permits for their project, the following resources may be helpful:

- For general siting and permitting assistance, the [Governor’s Office of Business and Economic Development](https://business.ca.gov/), provides a useful resource called [CalGold](https://www.business.ca.gov/calgold/).
- For CEQA guidance, visit the [Governor’s Office of Planning & Research State Clearinghouse](https://www.planning.ca.gov/).
- For water quality, the Central Valley Regional Water Quality Control Board [Dairy General Order Guidance](https://www.cvrrc.com/dairy.html) and information on the State Water Resources Control Board [Waste Discharge Requirements](https://wwrån.org/waste-discharge-requirements/).
- For air quality, the California Air Resources Board has information on [Local Air Districts Authority to Construct](https://www.arb.ca.gov/).
- For solid waste, the California Department of Resources Recycling and Recovery (CalRecycle) has information on [Solid Waste Facilities Permits](https://www.calrecycle.ca.gov/).

**Attachment 6: Permitting Documents (if applicable)**

Applicants must provide copies of applicable permits obtained, which include but are not limited to:

- Notice of Determination (NOD)
- Conditional Use Permit
- Authority to Construct
- Waste Discharge Requirements
- Solid Waste Facilities Permit

*Note: Permit requirements vary based on numerous factors (type of project, location, etc.) Not all permits need to be in place upon submission; however, applicants must demonstrate knowledge of permits required and indicate how far along they are in the permitting process. Applications that demonstrate a higher degree of project readiness will be eligible for a higher score under this criteria.*
5. Benefits to Priority Populations

SB 535 established statutory requirements that a minimum of 25 percent of California Climate Investments is allocated to projects that provide benefits to disadvantaged communities, and of that 25 percent, a minimum of 10 percentage points is allocated to projects that are also located within disadvantaged communities. Assembly Bill (AB) 1550 (Gomez, Chapter 369, Statutes of 2016), amended these requirements by increasing the percent of funds for projects located in disadvantaged communities from 10 to 25 percent and added a focus on investments in low-income communities and households. Collectively, these communities are referred to as ‘priority populations’. AB 1550 investment minimums apply to the overall appropriations of monies from the GGRF, not the individual agency programs. However, all California Climate Investments programs including the AMMP are encouraged to maximize benefits to disadvantaged communities, low-income communities and low-income households.

Priority populations can be identified using the mapping tools provided by CARB at https://www.arb.ca.gov/cc/capandtrade/auctionproceeds/communityinvestments.htm

Projects are not required to provide benefits to priority populations. However, the projects that are determined to be providing benefits based on their responses to the application questions are eligible to receive additional points during the review process.

Consistent with CARB’s 2018 Funding Guidelines for Agencies Administering California Climate Investments, priority will be given to those projects that maximize benefits to disadvantaged communities and low-income communities using criteria addressed as questions within the application. Please provide documents verifying that the projects meet the criteria below to receive additional points.

In addition, applicants must complete and upload the CARB Community Engagement Questionnaire (pages 1 – 3). The questionnaire is excerpted from the Community Engagement Co-Benefit Assessment Methodology for California Climate Investments and is converted into a fillable table for ease of use. Guidance on how to answer each question is provided in Section C of the full methodology available at: http://www.arb.ca.gov/cci-cobenefits.

---

1 Priority populations include residents of: (1) census tracts identified as disadvantaged by California Environmental Protection Agency per SB 535; (2) census tracts identified as low-income per AB 1550; or (3) a low-income household per AB 1550.
Attachment 7: Benefits to Priority Populations Supporting Documentation (if applicable)

Examples of supporting documentation may include, but are not limited to:

- Technical analysis documenting how project will reduce odor causing pollutants (e.g. ammonia or hydrogen sulfide), on-site criteria pollutants or toxic air contaminant emissions (e.g. decreased diesel fuel combustion) without increasing any other criteria air pollutant or toxic air contaminant emissions
- Labor contracts.
- Agreements with job training or certification programs.
- Documentation of employee domicile.

Note: Detailed Scoring Criteria are included in Appendix E.
Review and Notification

Review Process
CDFA will fund those projects that produce the highest results in permanent annual greenhouse gas emission reductions from handling dairy or livestock manure and maximize project benefits.

CDFA will conduct two levels of review during the grant application process. The first is an administrative and financial review to determine whether grant application requirements are met and to ensure financial soundness and credibility of the dairy or livestock operation. The second includes a comprehensive technical review of greenhouse gas emissions reduction and an evaluation of the merits of the grant applications based on the scoring criteria. The AMMP Technical Advisory Committee (AMMP-TAC) and technical subject matter experts from California academic research institutions will complete the second level review. The AMMP-TAC consists of experts in dairy and livestock manure management from state agencies and academia.

CDFA will prioritize socially disadvantaged farmers and ranchers for AMMP funding.

CDFA will follow the procedures set forth in Appendix C: Confidential Information with respect to confidential and proprietary information provided in the grant application.

Disqualifications
During the administrative review, the following will result in the automatic disqualification of a grant application:

- One or more unanswered questions necessary for the administrative, financial, or technical review;
- Missing, blank, unreadable, or corrupt content;
- Unusable or unreadable attachments;
- Requests for more than the maximum award amount.

APPEAL RIGHTS: Any disqualification taken by the CDFA during the administrative review for the preceding reasons may be appealed to CDFA’s Office of Hearings and Appeals Office within 10 days of receiving a notice of disqualification from CDFA. The appeal must be in writing and signed by the responsible party name on the grant application or his/her authorized agent. It must state the grounds for the appeal and include any supporting documents and a copy of the CDFA decision being challenged. The submissions must be sent to the California Department of Food and Agriculture,
Office of Hearings and Appeals, 1220 N Street, Sacramento, CA 95814 or emailed to CDFA.LegalOffice@cdfa.ca.gov. If submissions are not received within the time frame provided above, the appeal will be denied.

Notification and Feedback
All applicants will be notified regarding the status of their grant applications. Applicants not selected for an award will receive feedback regarding their applications within 60 days of announcing awards.

In accordance with CARB Funding Guidelines for Agencies that Administer California Climate Investments, CDFA will post basic information on the AMMP web site about all of the applications it has received at least 10 days before awarding grant funds. CDFA will post an updated list that identifies status of all project applications within 90 days of the date that agreements have been executed for all projects selected for funding.
Assistance and Questions

Workshops and Webinar
CDFA will conduct four Application Assistance Workshops on the AMMP solicitation process and use of the electronic application submission system. All workshops will be available as live webinars.

In addition, free-of-cost Technical Assistance (provided by a non-CDFA entity, such as not-for-profit organizations and/or university cooperative extension) will be offered on the technical aspects of the application process, including the GHG calculation requirements. CDFA strongly encourages applicants to obtain technical assistance when developing a grant application. These technical assistance providers have expertise in dairy and livestock manure management and may be able to assist applicants with preparation of application, GHG emission reduction calculations, permitting information, project design and availability of a computer with internet access to prepare applications. Technical assistance providers may not charge applicants for these services.

Times, locations and remote access information for CDFA Application Assistance Workshops and Technical Assistance providers are available on the AMMP webpage at https://www.cdfa.ca.gov/oefi/AMMP/ and the Climate Smart Agriculture Technical Assistance Program webpage at https://www.cdfa.ca.gov/oefi/technical/index.html. Please check the websites regularly for updated schedules for Technical Assistance Workshops. To locate your nearest UCANR Climate Smart Agriculture Community Education Specialist, click here.

Questions and Answers (Q&A)
General questions regarding the solicitation process must be submitted to cdfa.oefi_ammp_tech@cdfa.ca.gov. Questions sent via email must state “AMMP Question” in the subject line to ensure a response. Responses to all questions received during the workshops, webinar, or by email will be posted to CDFA’s AMMP website according to the schedule below.
March 20, 2020 is the final deadline to submit questions for the AMMP grant application. To maintain the integrity of the competitive grant process, CDFA is unable to advise or provide individuals with any information regarding specific grant application questions during the solicitation process.

Appendix B: Grant Recipient Requirements

Grant Agreement
Applicants selected for funding will receive a Grant Agreement package with specific instructions regarding award requirements, including information on project implementation and payment process.

Once a Grant Agreement is executed, grant recipients can begin implementation of the project. Grant recipients are responsible for the overall management of their awarded project to ensure all project activities, including labor associated with the installation are completed no later than December 31, 2022.

Grant recipients must display the California Climate Investments logo on their operation website and all outreach materials related to the project. Guidance on the usage of this logo is available at: http://www.caclimateinvestments.ca.gov/logo-graphics-request/

Pre-Project Consultation
A Pre-Project Consultation conducted by a CDFA representative to confirm project site information and discuss implementation plans is required prior to execution of a Grant Agreement.

Payment Process
CDFA will provide grant recipients with the necessary grant award and invoicing documents. Funds will be allocated on a reimbursement basis. Invoices must be submitted quarterly and include all supporting financial documentation to substantiate expenses. CDFA will withhold 10 percent from the total grant award until the verification requirement is complete to ensure grant recipients install their project as approved by CDFA.

Advance Payments
If selected for funding, recipients may be eligible for advance payments of up to 25 percent of the grant award, subject to the provisions of section 316.1 “Advance Payments” of the California Code of Regulations, Division 1, Chapter 5.

Reporting
A Final Performance Report will be required no later than 30 days after the project installation is complete. The Final Performance Report will require grant recipients to provide an evaluation of project outcomes and how the project contributed to greenhouse gas reductions from the dairy or livestock operation. Among other important information, grant recipients must report on the following:
• Greenhouse gas reductions, in MTCO$_2$e, achieved during the grant term (if any), along with all supporting calculations. Estimate the annual GHG reductions in MTCO$_2$e that will occur in each year until five years after completion.

• Describe benefits to local communities, including improvements in air and water quality (quantified, if applicable), and economic (e.g. job creation, job training) and social benefits identified in the grant application. Using the grant application as a guide, provide a comprehensive account of all benefits accorded to communities over the project term, and describe efforts planned or in place for sustaining the project’s benefits to disadvantaged communities and/or low-income communities through the life of the project.

**Critical Project Review**

Grant recipients must agree to a Critical Project Review during the project term to verify project progress as reported in Progress Reports submitted to CDFA.

**Post-Project Completion Requirements**

Applicants must agree to the following post-project completion requirements to execute a Grant Agreement: Grant recipients are expected to maintain documentation related to the AMMP-funded project. Grant recipients may be required to report on project outcomes achieved for a period of five years after project completion. Project emissions reductions determination and reporting must be consistent with guidelines provided in the requirements for Project Outcome Reporting in the CARB Funding Guidelines. The data to be reported may include, but may not be limited to:

- Weeks per year livestock spent at pasture before and during reporting period.
- Confirmation that solid separation or dry scrape technology is operational and being utilized.

Reported information on project outcomes will be made publicly available on CARB’s website ([https://www2.arb.ca.gov/our-work/programs/california-climate-investments](https://www2.arb.ca.gov/our-work/programs/california-climate-investments)) and in the Annual Report to the Legislature per CARB requirements.

The purpose of this reporting is to demonstrate the long-term success of AMMP-awarded projects by documenting that the adopted manure management practice is still operational and project benefits. In accordance with CARB Funding Guidelines, reported information will be made publicly available per CARB requirements. After the project is operational, CDFA may work with grant recipients to collect the necessary data and quantify GHG emission reductions. Failure to work with CDFA or its designees to provide the necessary project-related documentation will be considered non-performance. In the event of non-performance, CDFA shall take any action deemed necessary to recover all or any portion of the grant funding.
Appendix C: Confidential Information

The California Public Records Act (Government Code sections 6250, et seq.) and related statutory definitions of "confidential or proprietary information" (also known as "trade secrets") determine what information provided by the applicant is exempt from public disclosure. The following describes how questions are resolved regarding what information is confidential, the legal protections for confidential information, and internal and program procedures to maintain confidentiality.

What is "confidential?"
The California Public Records Act prevents the disclosure of confidential or proprietary information including, but not limited to:

- Confidential Business and financial information, including volume of business, costs and prices, customers, financial condition, trade secrets, and similar information obtained under an express or implied pledge of confidence. (Ev. Code § 1060 and Gov. Code § 6254).
- Personal data including tax information prohibited from disclosure. (Gov. Code § 6254 and Rev. & Taxation Code § 19542.

Applicants are directed to clearly mark, on each page, “confidential/proprietary information" those documents they feel contain confidential or proprietary information. However, the mere marking of documents as "confidential/proprietary information" will not result in their being treated as confidential if they are not exempt from disclosure under the California Public Records Act.

What if there is a question about what is confidential?
The CDFA Legal Office will review the records and determine whether the records are exempt from disclosure.

What program procedures will keep information confidential?
Financial information will be kept confidential with access restricted to qualified CDFA Audit Office staff solely for analysis. Applicants must agree to provide key financial information for three years to develop benchmarks to evaluate the program. The records will be kept for time set forth in CDFA’s Internal Record Retention Policy.
# Appendix D: Key Terms and Definitions

<table>
<thead>
<tr>
<th>Word/Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Applicant</td>
<td>The respondent to this solicitation.</td>
</tr>
<tr>
<td>Application</td>
<td>An applicant’s formal written response to this solicitation.</td>
</tr>
<tr>
<td>Cluster Project</td>
<td>Projects that propose to develop centralized manure management facilities serving more than one dairy or livestock operation (also known as clusters or “hub and spoke” model) are eligible. These projects could include a hub facility where centrally located operations would occur such as the collection of manure for composting from a group or cluster of existing dairy or livestock operations.</td>
</tr>
<tr>
<td>Commercially-available</td>
<td>A system and its technologies that has a proven operating history specific to the proposed application. Such a system should include information on its established design, installation procedures and practices, availability of professional service providers and distributors including construction and installation services. Services should also be readily available to properly maintain and operate the system over time including established warranties for parts, labor, and performance. Pre-commercial technologies are new technologies or enhancements of existing technologies that are not commercially available. Technologies can include pre-commercial and commercial components, but for the purposes of this solicitation, technology should be commercially available for the component.</td>
</tr>
<tr>
<td>Technologies</td>
<td></td>
</tr>
<tr>
<td>GHG</td>
<td><em>Greenhouse Gas(es)</em>, atmospheric gases that can trap infra-red radiation from the sun and contribute toward global warming and climate change, such as carbon dioxide, methane and nitrous oxide. The current solicitation will address projects aimed at reducing methane emissions.</td>
</tr>
<tr>
<td>GHG Emission Reduction</td>
<td>A calculated decrease in GHG emissions relative to a project baseline scenario over a specified period.</td>
</tr>
<tr>
<td>Greenhouse Gas Reduction Fund (GGRF)</td>
<td>A fund established in 2012 to receive State Cap and Trade Auction proceeds and define requirements for how funds must be used.</td>
</tr>
<tr>
<td>Matching Funds</td>
<td>Funds provided by the applicant toward the implementation of the alternative manure management practice.</td>
</tr>
<tr>
<td>Milk Producer</td>
<td>&quot;Producer&quot; means any person that operates a dairy herd which produces milk or cream commercially and whose bulk milk or bulk</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Permanent Greenhouse Gas Emission Reductions</td>
<td>“Permanent” means either that GHG reductions and GHG removal enhancements are not reversible, or that when GHG reductions and GHG removal enhancements may be reversible, mechanisms are in place to replace any reversed GHG emission reductions and GHG removal enhancements to ensure that all reductions endure for at least 100 years.</td>
</tr>
<tr>
<td>Baseline Scenario</td>
<td>“Baseline scenario” represents the GHG emissions presently occurring at the project location and that would occur in the absence of an AMMP project.</td>
</tr>
<tr>
<td>Project Scenario</td>
<td>“Project scenario” represents the GHG emissions and emission reductions that are reasonably expected to occur as a result of implementing an AMMP project.</td>
</tr>
<tr>
<td>Project Manager</td>
<td>The person designated by the applicant to oversee the project and to serve as the main point of contact for the CDFA.</td>
</tr>
<tr>
<td>Livestock Operation</td>
<td>An entity raising farm animals such as cattle, poultry, goats, sheep, swine and horses.</td>
</tr>
<tr>
<td>Socially Disadvantaged Farmer or Rancher</td>
<td>“Socially Disadvantaged Farmer or Rancher” means a farmer or rancher who is a member of a socially disadvantaged group. “Socially disadvantaged group” means a group whose members have been subjected to racial, ethnic, or gender prejudice because of their identity as members of a group without regard to their individual qualities. These groups include all of the following: (1) African Americans (2) Native Indians (3) Alaskan Natives (4) Hispanics (5) Asian Americans (6) Native Hawaiians and Pacific Islanders, as defined by the <a href="https://www.farmer.gov/equity-act/">Farmer Equity Act of 2017</a>.</td>
</tr>
</tbody>
</table>
## Appendix E: Detailed Scoring Criteria

<table>
<thead>
<tr>
<th>SCORING CRITERIA</th>
<th>MAXIMUM POINTS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PROJECT PLAN AND LONG-TERM VIABILITY</strong></td>
<td>25</td>
</tr>
<tr>
<td>Addressed all requirements of Project Implementation Plan section and Work Plan including, but not limited to:</td>
<td></td>
</tr>
<tr>
<td>a. Provide tons of material handled through the proposed management practice.</td>
<td></td>
</tr>
<tr>
<td>b. Technologies have a track record of success and are commercially available.</td>
<td></td>
</tr>
<tr>
<td>c. Documentation that demonstrates control of the dairy/livestock operation site provided (if applicable).</td>
<td></td>
</tr>
<tr>
<td>d. Guarantees that an adequate amount of feedstock (e.g. material to be composted) will be provided to make the project feasible by the time the project is operational (if applicable).</td>
<td></td>
</tr>
<tr>
<td>e. Specific list of all tasks needed to complete project using the Work Plan template provided.</td>
<td></td>
</tr>
<tr>
<td>f. Detailed Work Plan clearly and concisely described the tasks and activities required to achieve the goals/objectives in the proposed project narrative.</td>
<td></td>
</tr>
<tr>
<td>g. Included major work items (including but not limited to permitting, site planning, engineering, construction, equipment, field supervision, health and safety requirements, testing and bonds)</td>
<td></td>
</tr>
<tr>
<td>h. Reasonable estimate of projected timeline for the project to be operating at full capacity included.</td>
<td></td>
</tr>
<tr>
<td>i. Demonstrated that all tasks are logical and achievable within the grant term, and with available resources. Identified measurable targets that must be met to accomplish project within the grant timeline, with specific dates for each target.</td>
<td></td>
</tr>
<tr>
<td>j. Included an evaluation component to measure success of the project and to determine whether the goals/objectives were accomplished and build in measurable milestones and a timeline to complete the evaluation before the grant term expires. Evaluation plan consistent with work plan.</td>
<td></td>
</tr>
<tr>
<td>k. Long term operations and maintenance plan included.</td>
<td></td>
</tr>
</tbody>
</table>
I. Demonstrated that the applicant (including its contractors) and cooperating organizations have sufficient staff resources, technical expertise, and experience to successfully complete the proposed project. Provided resumes of key project personnel and contractors.

**BUDGET AND FINANCIALS**

Adequate documentation regarding organization’s financial strength provided through financial documents listed in the application. Additionally:

a. Evidence of ability to fund upfront costs while waiting for reimbursement provided. Demonstrated financial strength to sustain project beyond grant term.

b. Described and quantified sources and amount of local, state, and federal funds, loans, other grants, and all other funding necessary to complete the proposed project (if applicable).

c. Described and quantified expenditures already incurred to initiate work on project, such as engineering, site preparation, infrastructure, utility hookups, permitting and environmental review.

d. Provided a complete Budget Worksheet addressing issues including, but not limited to:
   1. Itemized costs consistent with the Work Plan.
   2. Back-up documentation including quotes, estimates, and equipment details in support of budget costs.
   3. Overall budget well justified and consistent with Work Plan.

e. Provided a clear accounting of all costs associated with all activities necessary to complete the project.

**ESTIMATED GREENHOUSE GAS EMISSIONS REDUCTION**

a. Described the proposed project and explained how it will result in reduction of metric tons of GHG emissions annually compared to existing practices for the dairy or livestock operation (10 points).

b. Completed the Estimated GHG Reduction Calculator spreadsheet for AMMP. Proper justification for all assumptions made in the calculation process provided (10 points).

Applicants reported GHG emission reduction results (in MTCO2e) as:

a. Total project emission reductions over 5 years (5 points);

b. GHG reduction per unit of energy-corrected milk (ECM) produced by the dairy operation over 5 years (dairy applicants only);

c. GHG reduction per animal (5 points – b or c)

d. GHG reduction per dollar of AMMP grant money requested over 5 years;
e. GHG reduction per dollar total Greenhouse Grass Reduction Fund (GGRF) grant money requested over 5 years (includes AMMP and other GGRF grants, if applicable) *(5 points – d or e).* Applications will be competitively scored on their projected emissions reductions.
