

**Master Permit (Infested Premise Nursery)**  
**Exhibit B**  
**County Agricultural Commissioners Requirements**  
December 28, 2009

1. Origin County Agricultural Commissioners (CAC) shall provide information and training to key nursery personnel regarding the glassy-winged sharpshooter (GWSS) program and compliance agreement (including exhibit) requirements.
2. The CAC shall ensure that the nursery maintains a staging area (loading dock) for shipments that is safeguarded from and apparently free of GWSS.
3. The staging area is trapped and monitored by the CAC to ensure the area is GWSS-free. Traps must be placed at a minimum of 2 traps per one-half acre in the staging areas. Loading dock traps must not exceed three GWSS adults in the same one-half acre in a two-week period. If the nursery is using Fenpropathrin (Tame®) or Carbaryl (Sevin®) as a foliar application on all outgoing loads containing host material, the staging area traps must not exceed six GWSS adults in the same one-half acre in a two-week period.
4. If the loading dock traps exceed three GWSS adults in the same one-half acre in a two-week period (or six GWSS adults in nurseries exclusively using Fenpropathrin (Tame®) or Carbaryl (Sevin®) on outgoing shipments), the nursery shall immediately suspend all shipments to non-infested areas. A 100' radius treatment in/around the staging area shall be conducted with a recommended chemical other than Tame® or Sevin® (see #7 of the Nursery Shipping Protocols). The nursery may resume shipping after one successful trap cycle below the threshold.
5. The CAC shall ensure that the nursery conducts a 100% inspection of all plants (host and non-host) for GWSS prior to moving plants to the staging area and the nursery shall not move any plants, on which GWSS was detected, to the staging area.
6. The origin CAC shall conduct a 100% inspection of all host plants presented for the presence of GWSS.
  - a. The CAC shall require that any plant material found to be infested with GWSS be removed from the staging area immediately and be refused certification.
  - b. The CAC shall certify those plants found free-from GWSS using a Certificate of Quarantine Compliance (CQC) attached to the shipping documents. The CAC shall ensure that the plants to be shipped are safeguarded from GWSS prior to shipping. This safeguarding includes treatment of entire load (including non-host when co-mingled with host material), in full compliance with all label requirements including re-entry interval, to mitigate the risk of the shipment becoming infested with GWSS prior to or at the time of loading. *Similarly, if a shipment destined to a non-enforcing county (Alpine, Del Norte, Inyo, Lassen, Mono, Modoc, Plumas, Sierra and Siskiyou Counties) is co-mingled with material destined for an enforcing county, the entire load shall be treated as a safeguarding measure.* The treatment shall be witnessed by the CAC and the county staff shall indicate the time, date, rate and material used on the CQC. The CQC shall expire at the end of the fifth day after being issued.
  - c. The plants shall only be loaded into vehicles that are free-from GWSS.

7. Origin CAC shall monitor nurseries for compliance with this agreement:
  - a. The CAC shall review inspection and treatment records maintained by the nursery.
  - b. In addition to inspection and certification of plants, the CAC shall monitor the nursery and its activities as frequently as possible.
8. The CAC shall ensure that both the CQC and "Blue Tag" accompany shipments destined to non-infested areas.
9. When any confirmed viable life stage is found on plant material at destination, the nursery shall immediately discontinue shipments that include the affected plant material (*may be entire species, variety, block origin, or pot size, as determined by origin CAC*). The nursery shall conduct, at minimum, one chemical treatment of all affected host material with a recommended chemical (see #7 of the Nursery Shipping Protocols). The pest problem shall be mitigated to the satisfaction of the origin CAC before shipments are allowed to resume. This includes survey of the nursery grounds by the CAC to assess pest risk and compliance with nursery stock pest cleanliness standards.

All information regarding suspensions of shipping privileges or specific plant species shall be put on the non-public (password protected) portion of the GWSS web site at: <http://www.cdfa.ca.gov/phpps/pdcp/>; Resources and Information; County Users; GWSS Bulletin Board.
