

Exhibit G1: Grower–High-Risk Processing Tomato Field

1. Harvested tomato fruit from a high-risk processing tomato field shall only be transported by a transporter operating under a compliance agreement with the Broomrape Program.
2. Harvested tomato fruit from a high-risk processing tomato field shall only be transported to a processing facility operating under a compliance agreement with the Broomrape Program.
3. A Field Management program shall be implemented for the control of broomrape, which includes management plans for pre-transplant, growing season, and post-harvest. See Broomrape Board recommended guidelines for examples. ([Home | Broomrape](#))
4. With the exception of MOT in a gondola, all Equipment authorized by establishment to enter a high-risk processing tomato field shall be cleaned reasonably free of soil and plant debris prior to moving equipment out of high-risk processing tomato field(s). See Broomrape Board recommended guidelines for examples. ([Home | Broomrape](#))
5. An area shall be designated for equipment entering and exiting a high-risk processing tomato field and included in the field management plan.
6. All persons authorized by the Establishment to enter a high-risk processing tomato field(s) shall be trained in broomrape identification, and the Establishment shall report the exact location of the first suspect broomrape plants of the season to the contracted processor(s) for that location immediately upon detection. In the event the detection is outside of the Designated Zone, the establishment shall also notify the Program immediately. ([Designated Zone Map](#))
7. Establishment shall use the Broomrape Board recommended Growing Degree Day Model ([GDD](#)) to develop a scouting and rogueing plan to remove suspect broomrape plants. This plan shall be included within the field management plan. If at any time the Establishment deems that it is infeasible to harvest a processing tomato field(s) due to broomrape, the Establishment must notify the Program and contracted processor(s) and terminate the crop within 7 days of notification in accordance with Broomrape Board recommended guidelines.
8. Suspect broomrape plants removed by the establishment must be disposed of in accordance with field management plan and the Broomrape Board recommended guidelines. ([Home | Broomrape](#))
9. All persons authorized by Establishment to enter a high-risk processing tomato field shall clean footwear of all soil and plant debris before exiting processing tomato field(s). See the Broomrape Board recommended guidelines. ([Home | Broomrape](#))
10. The establishment shall notify their contracted processor(s) 48 hours prior to planting or harvesting in a high-risk processing tomato field.

11. The Program shall be allowed access to a high-risk processing tomato field with 48 hour advanced notification in order to verify compliance with these requirements.
12. All required notifications to the Program and questions about this exhibit shall be made to the Program via email to: Broomrape_Program@cdfa.ca.gov
