Fax: (661) 399-1601

## I. Project Updates

### Navel Orangeworm Sterile Insect Technique

The Navel Orangeworm (NOW) Pilot Project (Project) utilizes NOW sterile insect technique (SIT) moths obtained from the United States Department of Agriculture (USDA) Phoenix, Arizona Rearing Facility. Quality Control (QC) tests are performed on every shipment of NOW SIT moths used for aerial releases.

Aerial releases for 2022 began on March 15, 2022, with one magazine of approximately 750,000 moths being released daily over Zones 1 and 3. A second magazine of approximately 750,000 moths began being released daily on May 28 over Zones 5 and 7 with regular releases being diverted to separate sites for research purposes.

From March 15 to April 4, aerial releases were conducted on the same day the magazines were received in California. Since April 6, aerial releases have been conducted the day after the magazines were received in California; meaning the magazines were kept overnight in cold-storage prior to being released the following morning. This change in the aerial release schedule was due to changes to the airline's flight schedule from Phoenix, AZ to Bakersfield, CA that the Program uses to ship magazines from the Phoenix Rearing Facility to the CDFA Shafter field office. This next-day aerial release schedule continued for the remainder of the season.

CDFA conducted ground releases in lieu of aerial releases when release aircrafts were unavailable due to maintenance or repairs. In 2022, ground releases were conducted during the month of June and were limited to one magazine released at one zone per day, along the north and west edges of the zone. Ground releases occurred only at Zones 1 and 3 during weekdays, alternating the zones each day. No ground releases were conducted on weekends due to staff shortages.

Listed below are any circumstances which prevented or altered regular aerial releases in 2022:

- Saturday, March 19: No aerial release conducted due to severe weather conditions; magazine held an extra night in the cold room to be released the following day
- Sunday, March 20: Double release; today's magazine and magazine from previous day released
- Tuesday, March 22: Shipment of moths not transferred through airlines; this shipment was transferred next day
- Wednesday, March 23: Double release; today's magazine and magazine from previous day released
- Monday, March 28: No aerial release conducted due to severe weather conditions; magazine held an extra night in the cold room to be released the following day
- Tuesday, March 29: Double release; today's magazine and magazine from previous day released

- Tuesday, April 5: No aerial release conducted due to release schedule change from same-day release to next-day release
- Saturday, April 23: Shipment of moths not transferred through airlines; this shipment was destroyed
- Sunday, April 24: No aerial release due to shipment of moths not being transferred through airlines
- Saturday, April 30: Shipment of moths not transferred through airlines; this shipment was held overnight in Phoenix and shipped on May 1
- Sunday, May 1: No aerial release due to shipment of moths not being transferred through airlines
- Monday, May 2: Both shipments from April 30 and May 1 released
- Saturday, May 14: Shipment destroyed at rearing facility due to issue with irradiation
- Sunday, May 15: No aerial release due to issue with irradiation
- Monday, May 30 – Wednesday, June 8: No aerial releases due to issues with release aircrafts
- Thursday, June 9 – Friday, June 10: Ground releases conducted due to ongoing issues with release aircrafts; ground release conducted at Zone 1 on June 9 and at Zone 3 on June 10
- Saturday, June 11 – Sunday, June 12: No releases conducted due to lack of personnel needed to operate ground release equipment
- Monday, June 13 – Friday, June 17: Ground releases conducted due to ongoing issues with release aircrafts; ground release conducted at Zone 1 on June 13, 15, and 17; and at Zone 3 on June 14 and 16
- Saturday, June 18 – Sunday, June 19: No releases conducted due to lack of personnel needed to operate ground release equipment
- Monday, June 20: Aerial release conducted for one magazine only; shipments not sent through airlines due to issue at rearing facility
- Tuesday, June 21: No releases due to shipment of moths not being transferred through airlines
- Saturday, June 25 – Monday, June 27: No releases due to issues with release machine
- Tuesday, June 28: Ground release conducted at Zone 1 due to ongoing issues with release machine
- Wednesday, June 29: No releases due to shipments of moths not being transferred through airlines
- Thursday, June 30: Single aerial release conducted over Zones 1 and 3
- Sunday, August 7: No shipments of moths transferred due to airline flight cancellations
- Monday, August 8: No releases due to airline flight cancellations
- Monday, August 15: No shipments of moths transferred due to airline flight cancellations
- Tuesday, August 16: No releases due to airline flight cancellations

### **Navel Orangeworm Trapping**

The NOW trapping program began May 5, 2020, with an Area Wide Project site that included a total of four orchards in Fresno County: two 640-acre almond orchards and two 640-acre pistachio orchards. On May 17, 2021, the Area Wide Project site expanded to include four additional orchards in Fresno County: one 640-acre almond orchard, one 640-acre pistachio orchard, one 160-acre almond orchard, and one 160-acre pistachio orchard. All eight orchards, designated as Zones 1 through 8, continue to be serviced on a weekly basis.

Listed below are any circumstances which prevented regular servicing in 2022:

- Week of January 7: No traps were serviced due to severe weather on site
- Week of January 14: No traps were serviced in Zones 1 – 4 due to staffing issues
- Week of February 25: No traps were serviced in Zone 1 due to pesticide applications on site
- Week of March 4: No traps were serviced in Zone 2 due to pesticide applications on site
- Week of March 11: Only 26 of the 72 traps were serviced in Zone 2 due to pesticide applications on site
- Week of April 1: Only Zones 3 and 4 were serviced this week due to severe weather on site
- Week of April 22: No traps were serviced in Zone 2 due to pesticide applications on site
- Week of May 20: No traps were serviced in Zone 4 due to pesticide applications on site
- Week of May 27: No traps were serviced in Zone 2 due to pesticide applications on site
- Week of June 10: No traps were serviced in Zone 4 due to staffing issues
- Week of July 15: No traps were serviced in Zone 4 due to pesticide applications on site
- Week of July 29: No traps were serviced in Zones 2 and 7 due to pesticide applications on site
- Week of August 5: No traps were serviced in Zone 3 due to pesticide applications on site
- Week of August 12: No traps were serviced in Zone 5 due to pesticide applications on site

## II. Project Design

The NOW Area Wide Project site includes eight orchards located in Fresno County, identified as Zones 1 through 8. Listed below is information related to each orchard:

Zone #	Crop Type	Acres	Aerial SIT Release/Non-Release	Date Added to Area Wide Project
Zone 1	Pistachio	640	Release	May 5, 2020
Zone 2	Pistachio	640	Non-Release	May 5, 2020
Zone 3	Almond	640	Release	May 5, 2020
Zone 4	Almond	640	Non-Release	May 5, 2020
Zone 5	Pistachio	640	Release	May 17, 2021
Zone 6	Pistachio	160	Non-Release	May 17, 2021
Zone 7	Almond	640	Release	May 17, 2021
Zone 8	Almond	160	Non-Release	May 17, 2021

Each zone has a trap site ratio of approximately 1 trap site per 18 acres for a total of 36 trap sites for each 640-acre zone and 9 trap sites for each 160-acre zone. Trap sites include two traps: one trap baited with NOW pheromone/PPO lures and one trap baited with pistachio meal. All traps are serviced on a weekly basis. Servicing includes collecting trap bottoms and replacing with new trap bottoms. Bait/lure changes occur once a month, and trap tops are replaced as needed. Counts are performed on each trap collected to determine number of wild versus sterile captures and male versus female captures.

### III. Trap Results for Weeks Ending on August 5, August 12, and August 19, 2022

#### Zone 1

Zone 1 is a pistachio orchard where aerial NOW SIT releases are conducted. A total of **72** traps were collected from Zone 1 on Monday, August 1, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

A total of **72** traps were collected from Zone 1 on Monday, August 8, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

A total of **72** traps were collected from Zone 1 on Monday, August 15, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

### Zone 3

Zone 3 is an almond orchard where aerial NOW SIT releases are conducted. No traps were collected from Zone 3 during the week of August 5 due to pesticide applications on site.

A total of **72** traps were collected from Zone 3 on Wednesday, August 10, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

A total of **72** traps were collected from Zone 3 on Wednesday, August 17, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

*Non-ID counts are NOW moths unable to be sexed as male or female/or identified as sterile or wild due to missing or unrecognizable genitalia caused by predation while traps were in storage awaiting processing								
<sup>1</sup> Traps in field since 12/21								
<sup>2</sup> Traps not serviced in Zone 6 during the week of Apr 1 due to severe weather on site								

## Zone 7

Zone 7 is an almond orchard where aerial NOW SIT releases will be conducted. A total of **72** traps were collected from Zone 7 on Thursday, August 4, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

A total of **72** traps were collected from Zone 7 on Thursday, August 11, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

A total of **72** traps were collected from Zone 7 on Thursday, August 18, with **36** pistachio meal baited traps and **36** pheromone/PPO lure traps.

## Zone 8

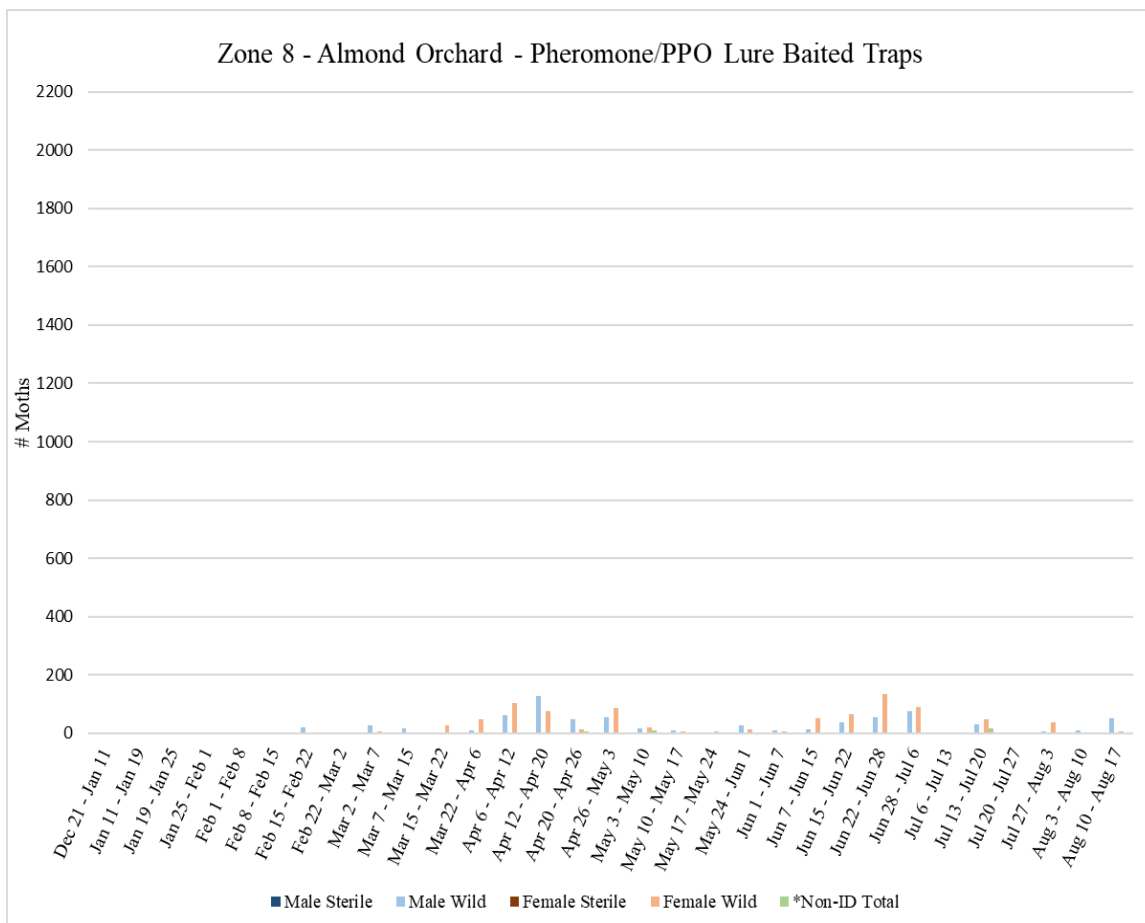

Zone 8 is an almond orchard where aerial NOW SIT releases are not conducted. A total of **18** traps were collected from Zone 8 on Wednesday, August 3, with **9** pistachio meal baited traps and **9** pheromone/PPO lure traps.

A total of **18** traps were collected from Zone 8 on Wednesday, August 10, with **9** pistachio meal baited traps and **9** pheromone/PPO lure traps.

A total of **18** traps were collected from Zone 8 on Wednesday, August 17, with **9** pistachio meal baited traps and **9** pheromone/PPO lure traps.

#### IV. Quality Control

QC tests are performed on samples taken from each shipment of sterile NOW moths. These tests include: zero-hour mortality rates, zero-hour mating dissections, forty-eight-hour mating dissections, seven-day longevity monitoring, and crush tests. Throughout the span of a week, Monday through Sunday, the results of each test are averaged. Below are the QC results for Mag 1 and Mag 2 of sterile NOW moths during the week of Monday, July 25, 2022 to Sunday, July 31, 2022:

##### Mag 1:

- 1% of moths from samples found dead at zero hour
- 1% of moths from samples found to have mated at zero hour
- 16% of moths from samples found to have mated after forty-eight hours
- 75% of moths from samples remained alive after seven days in BioChamber
- 93% of moths from samples found to have distinct red dye markings

##### Mag 2:

- 1% of moths from samples found dead at zero hour
- 0% of moths from samples found to have mated at zero hour
- 10% of moths from samples found to have mated after forty-eight hours
- 70% of moths from samples remained alive after seven days in BioChamber
- 97% of moths from samples found to have distinct red dye markings

Below are the QC results for Mag 1 and Mag 2 of sterile NOW moths during the week of Monday, August 1, 2022 to Sunday, August 7, 2022:

##### Mag 1:

- 1% of moths from samples found dead at zero hour
- 0% of moths from samples found to have mated at zero hour
- 9% of moths from samples found to have mated after forty-eight hours
- 76% of moths from samples remained alive after seven days in BioChamber
- 98% of moths from samples found to have distinct red dye markings

##### Mag 2:

- 1% of moths from samples found dead at zero hour
- 0% of moths from samples found to have mated at zero hour
- 10% of moths from samples found to have mated after forty-eight hours
- 78% of moths from samples remained alive after seven days in BioChamber
- 98% of moths from samples found to have distinct red dye markings

Below are the QC results for Mag 1 and Mag 2 of sterile NOW moths during the week of Monday, August 8, 2022 to Sunday, August 14, 2022:

##### Mag 1:

- 0% of moths from samples found dead at zero hour
- 0% of moths from samples found to have mated at zero hour
- 21% of moths from samples found to have mated after forty-eight hours
- 64% of moths from samples remained alive after seven days in BioChamber
- 98% of moths from samples found to have distinct red dye markings

##### Mag 2:

- 1% of moths from samples found dead at zero hour
- 0% of moths from samples found to have mated at zero hour
- 18% of moths from samples found to have mated after forty-eight hours
- 71% of moths from samples remained alive after seven days in BioChamber
- 97% of moths from samples found to have distinct red dye markings
