Fax: (661) 399-1601

I. Program Updates

Navel Orangeworm Area Wide Program – Multi-Phase Approach

Phase 1 – 2018-2022

Phase 1 was the Initial Phase of the Navel Orangeworm (NOW) Program (Program) with a focus on developing NOW sterile insect technique (SIT) moths, determining their viability during cold storage transfer, performing quality control (QC) on mating propensity and survivability of the sterile moths, developing a trap monitoring program, and collecting preliminary damage data from the orchards participating in the Program's project site.

Phase 2 – 2023

Phase 2 is the Data Phase of the NOW Program. The focus of this phase is controlling variables within the orchards participating in the Program's project site in order to increase the integrity of the field data being collected. During this phase a University of California Cooperative Extension (UCCE) coordinator will take over as a grower point of contact. They will be responsible for coordinating with growers and establishing orchards for the Phase 2 Program project site.

Navel Orangeworm Sterile Insect Technique

The Navel Orangeworm Program utilizes NOW SIT moths obtained from the United States Department of Agriculture (USDA) and California Department of Food and Agriculture's (CDFA) Phoenix, Arizona Rearing Facility. QC tests are performed on every shipment of NOW SIT moths used for aerial releases.

Aerial releases for 2023 began on Sunday, March 12, with one magazine of approximately 750,000 moths being released daily over two 640-acre orchards in Fresno County, designated as Zones 1 and 3. Beginning on Thursday, April 13, a second magazine of approximately 750,000 moths began being released daily over a single 640-acre orchard, designated as Zone 6. During the period of April 18 to April 23, the second magazine was released daily over two 640-acre orchards, designated as Zones 6 and 7. As of Monday, April 24, the second magazine began being released daily over two 640-acre orchards, designated as Zones 4 and 6.

Ground releases are conducted in lieu of aerial releases only when aerial releases are not possible. Ground releases are limited to one magazine released at one zone per day, along the north and west edges of the release zone.

Listed below are any circumstances which prevented regular releases in 2023:

March 10: No release conducted due to excessive rain preventing access to release sites via air or ground; moth shipment from March 9 held overnight for a second night for potential release on March 11

March 11: No release conducted due to excessive rain preventing access to release sites via air or ground; moth shipment from March 9 was destroyed; moth shipment from March 10 held overnight for a second night for potential release on March 12

March 12: Double release conducted over Zones 1 and 3 with moth shipments from March 10 and 11

March 14: No release conducted due to excessive rain preventing access to release sites via air or ground; moth shipment from March 13 held overnight for a second night for potential release on March 15

March 15: Double release conducted over Zones 1 and 3 with moth shipments from March 13 and 14

March 17: No release conducted due to mechanical issues with release aircraft; moth shipment from March 16 held overnight for a second night for potential release on March 18

March 18: Double release conducted over Zones 1 and 3 with moth shipments from March 16 and 17

April 20: First magazine unintentionally released over Zones 1 and 7 instead of Zones 1 and 3; the second magazine released, per schedule, over Zones 6 and 7

May 10: Ground release conducted at Zone 1 using Mag 1 while release aircraft underwent repairs; Mag 2 from May 9 held overnight for a second night for potential release on May 11; only one magazine transferred through airline for potential release on May 11

May 11: Aerial releases conducted per schedule; Mag 2 from May 9 released over Zones 4 and 6

May 30: Only Mag 1 shipped through airline due to issue at rearing facility

May 31: Single aerial release conducted using Mag 1 over Zones 1 and 3 only

June 6: No shipments sent through airline due to airline flight cancellations

June 7: No releases due to airline flight cancellations from previous day

June 13: No shipments sent through airline due to airline flight cancellations

June 14: No releases due to airline flight cancellations from previous day

June 18: No shipments received; shipments placed on incorrect flight

June 19: No releases due to shipments being placed on incorrect flight on previous day

June 20: No shipments sent through airline due to airline flight cancellations

June 21: No releases due to airline flight cancellations from previous day

June 26: Single ground release conducted at Zone 4 using Mag 2 from June 25 while release aircraft underwent repairs; Mag 1 from June 25 held overnight for potential release on June 27

June 27: Single ground release conducted at Zone 1 using Mag 1 from June 25 while release aircraft underwent repairs; both mags from June 26 held overnight for potential release on June 28; no shipments sent through airlines

June 28: Single ground release conducted at Zone 4 using Mag 2 from June 26; no shipments sent through airlines due to issue at rearing facility; Mag 1 from June 26 destroyed at Shafter facility

June 29: No releases; shipments not sent through airlines due to issue at rearing facility

June 30: No releases; shipments not sent through airlines due to issue at rearing facility

Navel Orangeworm Trapping

During Phase 1 of the NOW Program, trap monitoring operations began May 5, 2020, with an area wide project site that included a total of four orchards in Fresno County: two 640-acre almond orchards and two 640-acre pistachio orchards. On May 17, 2021, the Area Wide Project site expanded to include four additional orchards in Fresno County: one 640-acre almond orchard, one 640-acre pistachio orchard, one 160-acre almond orchard, and one 160-acre pistachio orchard. All eight orchards, designated as Zones 1 through 8, were serviced on a weekly basis.

For Phase 2 of the NOW Program, the area wide project site will include eight 640-acre orchards; four pistachio and four almond, located in Fresno County. All eight orchards, designated as Zones 1 through 8, have been identified. Trapping is being conducted weekly in Zones 1 through 8.

Listed below are any circumstances which prevented regular trap servicing in 2023:

- Week of March 3: No traps were serviced due to excessive rain preventing access to trap sites
- Week of March 17: Only Zone 1 traps were serviced; Zones 2 - 6 traps not serviced due to excessive rain preventing access to trap sites
- Week of March 24: Only Zone 1 traps were serviced; Zones 2 - 6 traps not serviced due to excessive rain preventing access to trap sites
- Week of March 31: No traps were serviced in Zone 2 due to excessively muddy conditions preventing access to trap sites; trap sites 26 – 36 in Zone 4 were not serviced due to pesticide applications on site
- Week of May 5: No traps were serviced in Zone 7 due to excessively muddy conditions preventing access to trap sites
- Week of May 12: No traps were serviced in Zones 2 and 5 due to pesticide applications on site
- Week of June 9: No traps were serviced in Zone 2 due to pesticide applications on site
- Week of June 23: Trap sites 20 – 36 not serviced in Zone 3 due to pesticide applications on site; Trap sites 10 – 36 not serviced in Zone 6 due to pesticide applications on site
- Week of June 30: No traps were serviced in Zone 8 due to pesticide applications on site

II. Project Design

The 2023 Area Wide Project site is being restructured in preparation for Phase 2 of the Program, which will establish more standardized and consistent approaches to mating disruption, sanitation, pesticide usage, and other cultural practices for more comparable data between each orchard set (release site/control site).

Listed below is information related to each orchard within the Program's Phase 2 project site for 2023:

Zone #	Crop Type	Acres	Release/Non-release Site	Date Added to Area Wide Project
Zone 1	Pistachio	640	Release	February 2023
Zone 2	Pistachio	640	Non-release	February 2023
Zone 3	Almond	640	Release	February 2023
Zone 4	Almond	640	Release	February 2023
Zone 5	Pistachio	640	Non-release	March 2023
Zone 6	Pistachio	640	Release	March 2023
Zone 7	Almond	640	Non-release	April 2023
Zone 8	Almond	640	Non-release	April 2023

Each zone has a trap site ratio of approximately 1 trap site per 18 acres for a total of 36 trap sites for each 640-acre zone. Each trap site has one trap baited with pistachio meal bait and one trap baited with NOW pheromone/PPO lures. All traps are serviced on a weekly basis. Servicing includes collecting trap bottoms and replacing with new trap bottoms. Bait/lure changes occur once a month, and trap tops are replaced as needed. Counts are performed on each trap collected to determine number of wild versus sterile captures and male versus female captures.

III. Trap Results for Weeks Ending on June 23 and June 30, 2023

Zone 1 – Pistachio Orchard

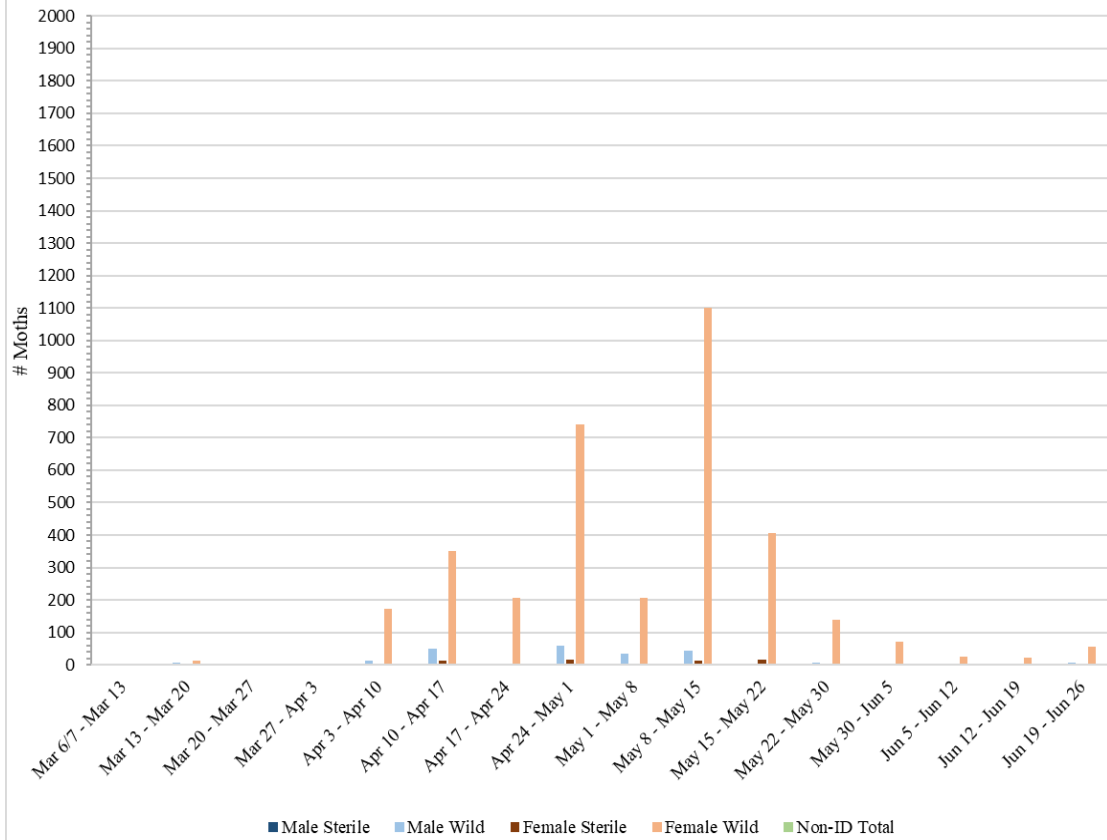

A total of **36** meal-baited traps and **36** pheromone/PPO lure-baited traps were collected from Zone 1 on Monday, June 19.

A total of **36** meal-baited traps and **36** pheromone/PPO lure-baited traps were collected from Zone 1 on Monday, June 26.

IV. Quality Control

QC tests are performed on samples taken from each shipment of sterile NOW moths. These tests include: zero-hour mortality rates, zero-hour mating dissections, forty-eight-hour mating dissections, seven-day longevity monitoring, and crush tests. Throughout the span of a week, Monday through Sunday, the results of each test are averaged. Below are the QC results from samples of sterile NOW moths for Mag 1, released over Zones 1 and 3, and Mag 2, primarily released over Zones 4 and 6, during the week of Monday, June 12, 2023 to Sunday, June 18, 2023:

Mag 1:

- 1% of moths from samples found dead at zero hour
- 3% of moths from samples found to have mated at zero hour
- 36% of moths from samples found to have mated after forty-eight hours
- 76% of moths from samples remained alive after seven days in BioChamber
- 94% of moths from samples found to have distinct red dye markings

Mag 2:

- 1% of moths from samples found dead at zero hour
- 2% of moths from samples found to have mated at zero hour
- 59% of moths from samples found to have mated after forty-eight hours
- 65% of moths from samples remained alive after seven days in BioChamber
- 95% of moths from samples found to have distinct red dye markings

Below are the QC results from samples of sterile NOW moths for Mag 1, released over Zones 1 and 3, and Mag 2, primarily released over Zones 4 and 6, during the week of Monday, June 19, 2023 to Sunday, June 25, 2023:

Mag 1:

- 1% of moths from samples found dead at zero hour
- 1% of moths from samples found to have mated at zero hour
- 30% of moths from samples found to have mated after forty-eight hours
- 79% of moths from samples remained alive after seven days in BioChamber
- 95% of moths from samples found to have distinct red dye markings

Mag 2:

- 1% of moths from samples found dead at zero hour
- 2% of moths from samples found to have mated at zero hour
- 61% of moths from samples found to have mated after forty-eight hours
- 73% of moths from samples remained alive after seven days in BioChamber
- 92% of moths from samples found to have distinct red dye markings
