I. **Program Updates**

Navel Orangeworm Area Wide Program – Multi-Phase Approach

Phase 1 – 2018-2022

Phase 1 was the Initial Phase of the Navel Orangeworm (NOW) Program (Program) with a focus on developing NOW sterile insect technique (SIT) moths, determining their viability during cold storage transfer, performing quality control (QC) on mating propensity and survivability of the sterile moths, developing a trap monitoring program, and collecting preliminary damage data from the orchards participating in the Program's project site.

<u>Phase 2 – 2023-2024</u>

Phase 2 is the Data Phase of the NOW Program. The focus of this phase is controlling variables within the orchards participating in the Program's project site in order to increase the integrity of the field data being collected. During this phase a University of California Cooperative Extension (UCCE) coordinator will be a primary grower point of contact. They will be responsible for coordinating with growers and establishing orchards for the Phase 2 Program project site. Strategic planning and industry communication with NOWAC remains with Matthew Aubuchon, the USDA National Policy Coordinator, in partnership with CDFA.

Navel Orangeworm Sterile Insect Technique

The Navel Orangeworm Program utilizes NOW SIT moths obtained from the United States Department of Agriculture (USDA) and California Department of Food and Agriculture's (CDFA) Phoenix, Arizona Rearing Facility. QC tests are performed on every shipment of NOW SIT moths used for aerial releases.

Releases of sterile NOW moths began on March 20, 2024, with one magazine of approximately 750,000 sterile moths being released daily over select sites in West Fresno County. CDFA conducted ground releases daily between March 20 and April 7 at Zones 7 and 8 until aerial releases were available. Ground releases were limited to one magazine released at one zone per day along the north and west edges, alternating between the two zones each day. Aerial releases began on April 8 with one magazine being released daily over Zones 7 and 8. Initially, releases will be conducted exclusively over almond sites and will change to being conducted exclusively over pistachio sites later in the year to prioritize periods of crop-specific vulnerability to NOW damage.

CDFA began conducting ground releases every Wednesday, starting on May 8, due to shortage of pilots needed for aerial release. These weekly ground releases occur at either Zone 7 or Zone 8, alternating between the two zones each week when possible.

Listed below are any circumstances which prevented regular aerial releases in 2024:

- March 20 March 23: Ground releases conducted while aerial releases were unavailable
- March 24: No releases conducted due to excessive rain and muddy field conditions preventing access to release sites
- March 25 March 26: Ground releases conducted while aerial releases were unavailable

- <u>March 27</u>: No releases conducted due to release equipment issues
- <u>March 28 March 29</u>: Ground releases conducted while aerial releases were unavailable
- <u>March 30</u>: No releases conducted due to excessive rain and muddy field conditions preventing access to release sites
- <u>March 31</u>: Ground releases conducted while aerial releases were unavailable
- <u>April 1</u>: No releases conducted due to excessive rain and muddy field conditions preventing access to release sites
- <u>April 2 April 5</u>: Ground releases conducted while aerial releases were unavailable
- <u>April 14</u>: No releases conducted due to excessive rain and muddy field conditions preventing access to release sites; magazine was held overnight for potential release on April 15
- <u>April 15</u>: Double aerial release conducted with moth shipments from April 13 and 14
- July 7: Aerial release only conducted over Zone 8 due to issues with release equipment during flight; Zone 7 not released over

Navel Orangeworm Trapping

The Phase 2 Area Wide Project Site for 2024 includes eight 640-acre orchards: four pistachio and four almond, and one 600-acre almond orchard, located in Fresno County. Trapping is being conducted weekly year-round in all nine orchards, designated as Zones 1 through 9. Zone 9 was added to the Project Site on May 20, 2024.

Listed below are any circumstances which prevented regular trap servicing in 2024:

- <u>Week of January 5</u>: No traps were serviced due to excessive rain and muddy conditions preventing access to trap sites
- <u>Week of January 12</u>: No traps were serviced in Zones 4 and 6 due to excessive rain and muddy conditions preventing access to trap sites
- <u>Week of January 26</u>: No traps were serviced due to excessive rain and muddy conditions preventing access to trap sites
- <u>Week of February 2</u>: No traps were serviced in Zones 3 and 7 due to pesticide applications on site
- <u>Week of February 9</u>: No traps were serviced due to excessive rain and muddy conditions preventing access to trap sites
- <u>Week of February 16</u>: No traps were serviced in Zones 4 and 8 due to excessive rain and muddy conditions preventing access to trap sites
- <u>Week of February 23</u>: No traps were serviced in Zones 1, 2, 5, 6, and 7 due to excessive rain and muddy conditions preventing access to trap sites
- <u>Week of March 1</u>: No traps were serviced in Zone 8 due to pesticide applications on site
- <u>Week of March 8</u>: No traps were serviced in Zones 4 and 8 due to excessive rain and muddy conditions preventing access to trap sites; Traps 13 36 not serviced in Zone 3 due to pesticide applications on site

- <u>Week of March 15</u>: No traps were serviced in Zone 4 due to pesticide applications on site
- Week of March 22: No traps were serviced in Zones 2 and 5 due to pesticide applications on site
- <u>Week of March 29</u>: No traps were serviced in Zone 4 due to pesticide applications on site
- <u>Week of April 5</u>: No traps were serviced in Zone 4 due to staffing issues
- Week of April 19: No traps were serviced in Zone 8 due to pesticide applications on site
- <u>Week of May 10</u>: No traps were serviced in Zone 8 due to pesticide applications on site
- <u>Week of May 24</u>: No traps were serviced in Zone 6 due to pesticide applications on site
- <u>Week of July 5</u>: No traps were serviced in Zones 4 and 9 due to pesticide applications on site
- <u>Week of July 12</u>: No traps were serviced in Zone 4 due to staffing issues

II. Project Design

The Area Wide Project Site was restructured in 2023 in preparation for Phase 2 of the Program. Phase 2 aims to establish more standardized and consistent approaches to mating disruption, sanitation, pesticide usage, and other cultural practices for more comparable data between each orchard set (release site/control site).

The 2024 Area Wide Project Site includes nine orchards located in Fresno County, identified as Zones 1 through 9. Listed below is information related to each orchard within the Program's Phase 2 project site for 2024:

| Zone # | Сгор Туре | Acres | Release/Non-release Site | Magazine Designation | Date Added to Area Wide Project |
|--------|--------------|-------|-----------------------------|-------------------------|---------------------------------|
| Zone 1 | Pistachio | 640 | Non-release | | February 2023 |
| Zone 2 | Pistachio | 640 | Release | TBD | February 2023 |
| Zone 3 | Almond | 640 | Non-release | | February 2023 |
| Zone 4 | Almond | 640 | Non-release February 2023 | | February 2023 |
| Zone 5 | Pistachio | 640 | Release | TBD | March 2023 |
| Zone 6 | Pistachio | 640 | Non-release | | March 2023 |
| Zone 7 | Almond | 640 | Release | Mag 1 | April 2023 |
| Zone 8 | Almond | 640 | Release | Mag 1 | April 2023 |
| Zone 9 | Almond | 600 | Non-release | | May 2024 |

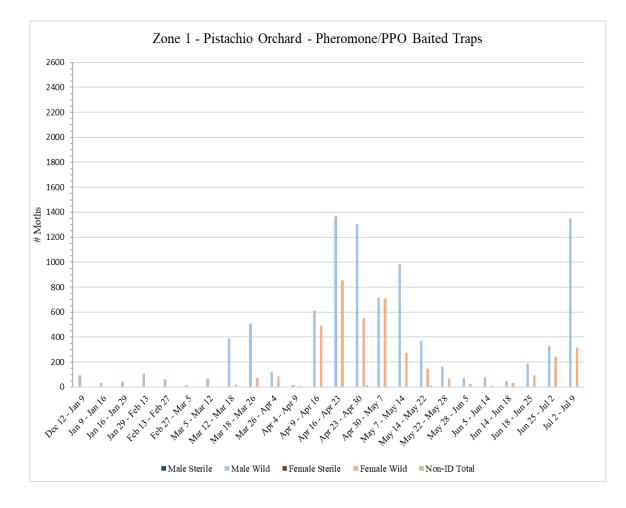

Each zone has a trap site ratio of approximately one trap site per 18 acres for a total of 36 trap sites for each 640acre zone and 34 traps for the 600-acre zone. Each trap site has one trap baited with NOW pheromone/PPO lures. All traps are serviced on a weekly basis. Servicing includes collecting trap bottoms and replacing with new trap bottoms. Bait/lure changes occur once a month, and trap tops are replaced as needed. Counts are performed on each trap collected to determine number of wild versus sterile captures and male versus female captures.

III. Trap Results for <u>Week Ending on July 12, 2024</u>

Zone 1 – Pistachio Orchard

A total of 36 pheromone/PPO lure-baited traps were collected from Zone 1 on <u>Tuesday</u>, July 9.

IV. NOW Degree Days

NOW Degree days begin to accumulate when ambient temperatures remain between the lower threshold of 55° F and the upper threshold of 93.9° F. Using data from weather stations nearest to the trap sites, courtesy of the UC IPM website - <u>https://ipm.ucanr.edu/PHENOLOGY/ma-navel_orangeworm.html</u>, the chart below shows daily and total accumulated degree days since January 1, 2024. The model uses a double triangle and vertical cutoff method of calculating degree days.

| Date | Air Temperatures (°F) | | Degree Days | | |
|-----------|-----------------------|-----|-------------|-------------|--|

V. Quality Control

QC tests are performed on samples taken from each shipment of sterile NOW moths. These tests include: zerohour mortality rates, zero-hour mating dissections, forty-eight-hour mating dissections, seven-day longevity monitoring, and crush tests. Throughout the span of a week, Monday through Sunday, the results of each test are averaged. Below are the QC results from samples of sterile NOW moths for Mag 1, primarily released over Zones 7 and 8, during the week of <u>Monday</u>, July 1, 2024 to <u>Sunday</u>, July 7, 2024:

- 1% of moths from samples found dead at zero hour
- 0% of moths from samples found to have mated at zero hour
- 68% of moths from samples found to have mated after forty-eight hours
- 82% of moths from samples remained alive after seven days in BioChamber
- 99% of moths from samples found to have distinct red dye markings
