I. Program Updates

Navel Orangeworm Area Wide Program – Multi-Phase Approach

Phase 1 – 2018-2022

Phase 1 was the Initial Phase of the Navel Orangeworm (NOW) Program (Program) with a focus on developing NOW sterile insect technique (SIT) moths, determining their viability during cold storage transfer, performing quality control (QC) on mating propensity and survivability of the sterile moths, developing a trap monitoring program, and collecting preliminary damage data from the orchards participating in the Program's project site.

Phase 2 – 2023-2025

Phase 2 is the Data Phase of the NOW Program. The focus of this phase is controlling variables within the orchards participating in the Program's project site to increase the integrity of the field data being collected. Strategic planning and industry communication with NOWAC remains with Matthew Aubuchon, the USDA National Policy Coordinator, in partnership with CDFA.

Navel Orangeworm Sterile Insect Technique

The Navel Orangeworm Program utilizes NOW SIT moths obtained from the United States Department of Agriculture (USDA) and California Department of Food and Agriculture's (CDFA) Phoenix, Arizona Rearing Facility. QC tests are performed on every shipment of NOW SIT moths used for aerial releases.

Releases of sterile NOW moths began on March 26 and concluded on October 28, with one magazine of approximately 750,000 sterile moths released daily over select sites in West Fresno County. CDFA conducted ground releases every day between March 26 and May 27 at select sites until aerial releases were available. Ground releases occurred at Zones 3 and 9 between March 26 and May 11. The remaining almond release sites were added to the release schedule starting on May 12, bringing the total to 8 almond release sites, which include Zones 3, 9, 12, 14, 16, 18, 19, and 21.

Beginning on May 28 and continuing to the end of the season, releases were conducted six days per week via aircraft.

Releases were conducted exclusively over almond sites between March 26 and August 14. Releases were then conducted exclusively over pistachio sites between August 15 and October 28. These pistachio sites included Zones 6, 22, 26, 27, 28, 29, 32, and 33.

Listed below are circumstances which prevented regular releases in 2025:

- March 29 – March 30: No releases conducted due to staffing issues
- April 26: No releases conducted due to rain and muddy conditions preventing access to the release sites; magazine from April 26 held overnight for release on April 27
- April 27: Ground release conducted for both magazines from April 26 and April 27

- April 28 – April 29: Aerial releases were conducted in place of ground releases for testing purposes
- May 6: No releases conducted due to change from same-day to next-day releases
- June 30: No releases conducted due to issues with release equipment
- July 1: Double aerial release conducted for both magazines from June 30 and July 1
- July 8: No moth shipment received due to issue with airline flight diversion
- July 9: No releases conducted due to previous day's issue with airline
- July 10: No moth shipment received due to issue at rearing facility
- July 11: No releases conducted due to previous day's issue at rearing facility
- August 8: Ground release conducted in lieu of aerial release due to shortage of pilots
- August 11: No releases conducted due to shortage of pilots and CDFA staff needed to conduct ground release; magazine from August 10 held overnight for release on August 12
- August 12: Double aerial release conducted for both magazines from August 10 and August 11
- September 8: Ground release conducted in lieu of aerial release due to issue with release aircraft
- September 19: No release conducted due to rain and muddy conditions preventing access to the release sites; magazine from September 19 held overnight for release on September 20
- September 20: Double aerial release conducted for both magazines from September 19 and September 20
- September 29: Ground release conducted in lieu of aerial release due to issue with release equipment
- October 14: No release conducted due to rain and muddy conditions preventing access to the release sites; magazine from October 14 held overnight for release on October 15
- October 15: Double aerial release conducted for both magazines from October 14 and October 15
- October 17: Ground release conducted in lieu of aerial release due to low aerial visibility
- October 22: Ground release conducted in lieu of aerial release due to low aerial visibility
- October 27: No release conducted due to rain and muddy conditions and low aerial visibility; magazine from October 27 held overnight for release on October 28
- October 28: Double ground release conducted for both magazines from October 27 and October 28

Navel Orangeworm Trapping

The Phase 2 Area Wide Project Site for 2025 currently includes thirty-two orchards: sixteen pistachio and sixteen almond, located in the San Joaquin Valley. In 2024, the program had nine orchards with each orchard ranging in area from 600 to 640 acres. Many of these locations are currently enrolled in the 2025 field season; however, this year the Program expanded enrollment to 32 orchards with the total area for each location being approximately 160-acres. Trapping is being conducted weekly year-round in all zones.

Listed below are any circumstances which prevented regular trap servicing in 2025:

- Week of January 3: No traps were serviced in Zones 2, 6, and 9 due to excessive rain and muddy conditions preventing access to trap sites
- Week of January 31: No traps were serviced in Zone 9 due to excessive rain and muddy conditions preventing access to trap sites; Zone 3, trap numbers 26 – 36 not serviced due to pesticide applications on site
- Week of February 7: No traps were serviced in Zones 3 and 7 due to pesticide applications on site; Zone 4, trap numbers 8 – 36 not serviced due to pesticide applications on site; No traps were serviced in Zone 6 due to rain and muddy conditions preventing access to trap sites
- Week of February 14: No traps were serviced in Zones 3 and 7 due to pesticide applications on site
- Week of February 21: No traps were serviced in Zones 3 and 7 due to pesticide applications on site; No traps were serviced in Zone 6 due to staffing issues
- Week of March 7: No traps were serviced in Zones 2, 3, 4, and 7 due to pesticide applications on site; No traps were serviced in Zone 5 due to excessive rain and muddy conditions preventing access to trap sites
- Week of March 21: No traps were serviced in Zones 4 and 6 due to excessive rain and muddy conditions preventing access to trap sites
- Week of March 28: No traps were serviced in Zones 2 and 9 due to pesticide applications on site; No traps were serviced in Zone 6 due to staffing issues
- Week of April 4: No traps were serviced in Zone 8 due to pesticide applications on site; No traps were serviced in Zone 4 due to staffing issues
- Week of April 11: No traps were serviced in Zones 3 and 8 due to pesticide applications on site
- Week of April 18: No traps were serviced in Zone 7 due to pesticide applications on site
- Week of April 25: No traps were serviced in Zone 6 due to staffing issues
- Week of May 9: No traps were serviced in Zones 3, 5, 7, and 8 due to pesticide applications on site
- Week of June 20: No traps were serviced in Zones 6, 20, and 21 due to pesticide applications on site
- Week of June 27: No traps were serviced in Zones 2 and 5 due to pesticide applications on site
- Week of July 11: No traps were serviced in Zones 3, 7, 20, and 21 due to pesticide applications on site
- Week of July 18: No traps were serviced in Zones 8, 18, and 24 due to pesticide applications on site
- Week of August 1: No traps were serviced in Zone 3 due to pesticide applications on site; only trap number 1 was serviced in Zone 34 due to pesticide applications on site
- Week of August 22: No traps were serviced in Zone 22 due to pesticide applications on site
- Week of August 29: No traps were serviced in Zones 27, 31, 32, and 33 due to pesticide applications on site; trap number 7 was not serviced in Zone 25 due to harvest equipment on site
- Week of September 5: No traps were serviced in Zone 6 due to pesticide applications on site

- Week of September 12: No traps were serviced in Zone 20 due to harvest equipment on site
- Week of September 26: No traps were serviced in Zones 9, 31, 32, and 33 due to pesticide applications on site
- Week of October 3: No traps were serviced in Zones 13 and 14 due to pesticide applications on site
- Week of October 10: No traps were serviced in Zone 14 due to staffing issues
- Week of October 17: No traps were serviced in Zones 2, 3, 5, 6, 7, 8, 9, 11, 13, 14, 17, 18, 19, 26, 28, 29, 30, 31, 32, 33, 34 due to excessive rain and muddy conditions preventing access to trap sites
- Week of October 24: Trap number 5 in Zone 26 not serviced due to muddy conditions preventing access to the trap site
- Week of October 31: No traps were serviced in Zones 6, 20, 21, and 27 due to pesticide applications on site
- Week of November 7: No traps were serviced in Zones 20, 21, 27, and 32 due to pesticide applications on site
- Week of November 14: No traps were serviced in Zone 5 due to pesticide applications on site; trap number 5 in Zone 32 was not serviced due to pesticide applications on site
- Week of November 21: No traps were serviced, except Zones 23 and 25, due to excessive rain and muddy conditions preventing access to trap sites
- Week of November 28: No traps were serviced, except Zones 15 and 24, due to excessive rain and muddy conditions preventing access to trap sites
- Week of December 5: No traps were serviced in Zone 8 due to pesticide applications on site

II. Project Design

The Area Wide Project Site was restructured in 2023 in preparation for Phase 2 of the Program. Phase 2 aims to establish more standardized and consistent approaches to mating disruption, sanitation, pesticide usage, and other cultural practices for more comparable data between each orchard set (release site/control site).

The 2025 Area Wide Project Site currently includes 32 orchards located in Fresno, Kings, and Kern counties. Listed below is information related to each orchard within the Program's project site for 2025:

Zone #	Crop Type	Acres	Release/Non-release Site	Date Added to Area Wide Project
Zone 2	Pistachio	160	Non-release	February 2023
Zone 3	Almond	160	Release	February 2023
Zone 5	Pistachio	160	Non-release	March 2023
Zone 6	Pistachio	160	Release	March 2023
Zone 7	Almond	160	Non-release	April 2023
Zone 8	Almond	160	Non-release	April 2023
Zone 9	Almond	160	Release	May 2024
Zone 10	Almond	160	Non-release	May 2025
Zone 11	Almond	160	Non-release	May 2025
Zone 12	Almond	160	Release	May 2025

Zone 13	Almond	160	Non-release	May 2025
Zone 14	Almond	160	Release	May 2025
Zone 15	Almond	160	Non-release	May 2025
Zone 16	Almond	150	Release	May 2025
Zone 17	Almond	173	Non-release	May 2025
Zone 18	Almond	150	Release	May 2025
Zone 19	Almond	183	Release	May 2025
Zone 20	Almond	150	Non-release	May 2025
Zone 21	Almond	155	Release	May 2025
Zone 22	Pistachio	180	Release	June 2025
Zone 23	Pistachio	155	Non-release	July 2025
Zone 24	Pistachio	155	Non-release	July 2025
Zone 25	Pistachio	160	Non-release	July 2025
Zone 26	Pistachio	155	Release	July 2025
Zone 27	Pistachio	150	Release	June 2025
Zone 28	Pistachio	160	Release	July 2025
Zone 29	Pistachio	170	Release	July 2025
Zone 30	Pistachio	160	Non-release	July 2025
Zone 31	Pistachio	155	Non-release	July 2025
Zone 32	Pistachio	160	Release	July 2025
Zone 33	Pistachio	160	Release	July 2025
Zone 34	Pistachio	160	Non-release	July 2025

Each zone has a trap site ratio of approximately one trap site per 18 acres for a total of 9 trap sites for each 160-acre zone. Each trap site has one trap baited with NOW pheromone/PPO lures. All traps are serviced on a weekly basis. Servicing includes collecting trap bottoms and replacing them with new trap bottoms. Bait/lure changes occur once a month, and trap tops are replaced as needed. Counts are performed on each trap collected to determine number of wild versus sterile captures and male versus female captures.

III. Trap Results for Week Ending on December 5, 2025

Zone 2 – Pistachio Orchard

A total of 9 pheromone/PPO lure-baited traps were collected from Zone 2 on Wednesday, December 3.

Zone 34 - Pistachio Orchard - Pheromone/PPO Baited Traps

IV. NOW Degree Days

NOW Degree days begin to accumulate when ambient temperatures remain between the lower threshold of 55° F and the upper threshold of 93.9° F. Using data from weather stations nearest to the trap sites, courtesy of the UC IPM website - https://ipm.ucanr.edu/PHENOLOGY/ma-navel_orangeworm.html, the chart below shows daily and total accumulated degree days since January 1, 2025. The model uses a double triangle and vertical cutoff method of calculating degree days.

Weather Station Location: Five Points, Fresno

Date	Air Temperatures (°F)		Degree Days	
	Min	Max	Daily	Accumulated
1/1/2025	33.00	60.20	0.50	0.50
1/2/2025	33.60	62.30	1.15	1.65

V. Quality Control

QC tests are performed on samples taken from each shipment of sterile NOW moths. These tests include: zero-hour mortality rates, zero-hour mating dissections, forty-eight-hour mating dissections, seven-day longevity monitoring, and crush tests. Throughout the span of a week, Monday through Sunday, the results of each test are averaged. Below are the 2025 SIT season's average QC results from samples of sterile NOW moths between the period of Wednesday, March 26, 2025 to Tuesday, October 28, 2025.

2025 Season Averages:

- 0% of moths from samples found dead at zero hour
- 2% of moths from samples found to have mated at zero hour
- 70% of moths from samples found to have mated after forty-eight hours
- 70% of moths from samples remained alive after seven days in BioChamber
- 99% of moths from samples found to have distinct red dye markings
