## I. Program Updates

### Navel Orangeworm Area Wide Program – Multi-Phase Approach

#### Phase 1 – 2018-2022

Phase 1 was the Initial Phase of the Navel Orangeworm (NOW) Program (Program) with a focus on developing NOW sterile insect technique (SIT) moths, determining their viability during cold storage transfer, performing quality control (QC) on mating propensity and survivability of the sterile moths, developing a trap monitoring program, and collecting preliminary damage data from the orchards participating in the Program's project site.

#### Phase 2 – 2023-2026

Phase 2 is the Data Phase of the NOW Program. The focus of this phase is controlling variables within the orchards participating in the Program's project site to increase the integrity of the field data being collected.

### Navel Orangeworm Sterile Insect Technique

The Navel Orangeworm Program utilizes NOW SIT moths obtained from the United States Department of Agriculture (USDA) and California Department of Food and Agriculture's (CDFA) Phoenix, Arizona Rearing Facility. QC tests are performed on every shipment of NOW SIT moths used for aerial releases.

Releases of sterile NOW moths are anticipated to begin in March 2026 over select sites in Fresno, Kings, and Kern Counties. Prior to releases, the Navel Orangeworm Action Committee (NOWAC) will meet to discuss plans for the 2026 NOW SIT season.

### Navel Orangeworm Trapping

The Phase 2 Area Wide Project Site for 2026 currently includes 32 orchards: 16 pistachio and 16 almond, located within Fresno, Kings, and Kern counties. All 32 orchards, designated as Zones 2-3, 5-34, are approximately 160 acres each with 9 trap sites placed per zone. Trapping is conducted weekly year-round in all zones.

Listed below are any circumstances which prevented regular trap servicing in 2026:

- Week of January 2: No traps were serviced in all zones due to excessive rain and muddy conditions preventing access to trap sites
- Week of January 9: No traps were serviced in all zones due to excessive rain and muddy conditions preventing access to trap sites
- Week of January 16: No traps were serviced in Zones 14, 26, and 31 due to dense fog preventing safe travel to trap sites; no traps were serviced in Zones 20 and 21 due to pesticide applications on site; trap numbers 5 and 6 were not serviced in Zone 28 due to farm equipment and livestock preventing access to trap sites
- Week of January 23: No traps were serviced in Zones 5, 13, and 14 due to pesticide applications on site; trap numbers 4-9 not serviced in Zone 20 due to pesticide applications on site; trap number 5 not serviced in Zone 28 due to farm equipment and livestock preventing access to trap sites

- Week of January 30: Zones 13 and 14 not serviced due to pesticide applications on site; trap numbers 3, 4, 5, 8, and 9 not serviced in Zone 10 due to pesticide applications on site

## II. Project Design

The 2026 Area Wide Project Site currently includes 32 orchards located in Fresno, Kings, and Kern counties. Listed below is information related to each orchard within the Program's project site for 2026:

Each zone has a trap site ratio of approximately one trap site per 18 acres for a total of 9 trap sites for each 160-acre zone. Each trap site has one trap baited with NOW pheromone/PPO lures. All traps are serviced on a weekly basis. Servicing includes collecting trap bottoms and replacing them with new trap bottoms. Bait/lure changes occur once a month, and trap tops are replaced as needed. Counts are performed on each trap collected to determine number of wild versus sterile captures and male versus female captures.

### III. Trap Results for the Week of February 6, 2026

#### IV. NOW Degree Days

NOW Degree days begin to accumulate when ambient temperatures remain between the lower threshold of 55° F and the upper threshold of 93.9° F. Using data from weather stations nearest to the trap sites, courtesy of the UC IPM website - [https://ipm.ucanr.edu/PHENOLOGY/ma-navel\\_orangeworm.html](https://ipm.ucanr.edu/PHENOLOGY/ma-navel_orangeworm.html), the chart below shows daily and total accumulated degree days starting on January 1, 2026. The model uses a double triangle and vertical cutoff method of calculating degree days.
