§ 3558. Insects and Other Arthropods That ~~Which~~ May Be Imported or Shipped Into or Within California Without a Permit.

Section 6305 of the Food and Agricultural Code requires persons to obtain a permit from the director or the United States Department of Agriculture to import into, or ship or transport within, the state live insects and other pests except for certain exemptions. One of these exemptions is for beneficial or useful insects and other arthropods of common occurrence in the state. To identify which beneficial insects and other arthropods do not require a permit to import into, or ship or transport within the state, the following lists are provided. However, as with all ~~such insect~~ shipments, they shall be rejected when the insects or other arthropods are moved in conjunction with host plants or other host organisms ~~that when such hosts would normally be rejected if moving independently~~ independent of exempt insects or arthropods.
