Weekly Report for Week Ending November 9, 2012

### **Fall Treatment Campaign**

Treatment maps were developed from the navigational files following the fall treatment campaign. A list of BLM lands treated in the fall campaign was compiled. Areas avoided on private lands due to environmental considerations were also compiled for the BLM annual report.

### **Fresno County**

Survey was performed in the Tumey Hills, south to the Kettleman Hills to introduce a newly hired field staff member to a portion of the spring treatment areas. Staff found the rangeland generally dry and void of new winter vegetation.

### **Fresno Facility**

Program vehicles were given their annual inspection for the year and minor maintenance was performed on several vehicles as a result.

Coupler parts were ordered for one ground-rig and rewired the ignitions on several others.

Work continues on developing materials for the November Board Meeting scheduled for November 27, 2012.
