## California Agricultural $\quad$ xports

1n 2012, California agricultural exports reached $\$ 18.18$ billion, representing a 8 percent increase over the previous year. As indicated by the table below, California's agricultural exports have grown at an impressive pace for the past 10 years except for a slight contraction between 2008 and 2009.

## California Agricultural Export Values, 2002-2012

| Year | Export Value in \$Billions |
| :---: | :---: |
| 2012 | $\$ 18.18$ |
| 2011 | $\$ 16.77^{*}$ |
| 2010 | $\$ 14.75^{*}$ |
| 2009 | $\$ 12.44$ |
| 2008 | $\$ 12.90$ |
| 2007 | $\$ 11.17$ |
| 2006 | $\$ 9.82$ |
| 2005 | $\$ 9.37$ |
| 2004 | $\$ 8.24$ |
| 2003 | $\$ 7.50$ |
| 2002 | $\$ 6.55$ |

*Note: the total export value for 2010 and 2011 was revised upward slightly from previously published totals due to availability of improved data on production.

Exports of almonds continued to be the top commodity from California, with a value of $\$ 3.39$ billion in foreign sales. Dairy and dairy products ranked second to almonds with a California total export value of $\$ 1.31$ billion, a one percent decrease over 2011.

The leading 57 export commodities accounted for $\$ 15.77$ billion, or 87 percent of total agricultural exports, while the remaining 13 percent of exports were associated with "other products and mixtures." Of the top 57 commodities, 30 experienced an increase in export value of 5 percent or greater.

California's share of total U. S. agricultural exports for 2012 was 12.9 percent or slightly more than the 12.3 percent share reported last year. California's top 10 export destinations - Canada, European Union, China/Hong Kong, Japan, Mexico, South Korea, India, United Arab Emirates, Turkey, and Taiwan, accounted for 69 percent of the 2012 export value. Export values to China and Taiwan grew 20 percent or more as compared to 2011.

## Methodology

Data to compute agricultural exports are derived from official government sources, published industry sources, and unpublished information from the government and the industry. Export quantities and values of the whole U.S. and California port districts are from the Department of Commerce (DOC) trade data posted on the United States International Trade Commission (USITC) online database (http://dataweb.usitc.gov/). Canadian import (value) data are from Strategis Canada's online database (http://strategis.ic.gc.ca/engdoc/ main.html). If the California export price is not available for a particular product, we use the U.S. average export price for that commodity in order to provide a dollar value for exports.

Production quantities and values are from various National Agricultural Statistics Service (NASS), Economic Research Service (ERS), and Agricultural Marketing Service (AMS) publications. A share of the raw data provided in these USDA service publications are released as a preliminary report early in the calendar year followed by a more accurate final report released at a later date. For accuracy, The University of California Agricultural Issues Center (AIC) export estimates use data from final USDA reports. Due to the US budget sequestration in 2013 a final report of production quantities and values of non-citrus fruits and nuts was not released. Estimates of 2012 California exports of non-citrus fruit and nuts were calculated using preliminary crop data.

AIC exports estimates use different methods from other sources, such as ERS. The ERS estimates are based on a state's national share of production of the exported commodity. The ERS method assumes that,
for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use geographic port data, without direct links to where the product originated. The AIC export figures correspond to commodities that have been produced on farms and ranches within California. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, AIC reports exports at the individual commodity level. For instance, exports of a given fruit in fresh, canned, and dried forms are summed and listed under the name of the fruit, although the method for fresh fruit exports may differ from the method used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

| California Agricultural Product Export Values and Rankings, 2010-2012 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

Source: University of California, Agricultural Issues Center.
${ }^{1}$ Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.
${ }^{2}$ Export values for 2011 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.
${ }^{3}$ Export values for 2010 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.
4 "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.
${ }^{5}$ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.
6 "Total Principal Commodity" values for 2010 and 2011 were revised based on updates to USDA NASS production data.
7 "Total Other Products and Mixtures" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; (b) categories for which the listed item does not provide data on individual commodities and (c) animal and plant products marketed in such small quantities that they are not included in the top 57 leading commodities.

California Share of U.S. Agricultural Exports by Category and Commodity, 2011 and 2012

Source: University of California Agricultural Issues Center.
${ }^{1}$ Export values were revised for 2011 based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.
${ }^{2}$ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.
${ }^{3}$ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.
4 "Total "Other Products and Mixtures" is equal to "Total US Agricultural Exports" minus "Total Principal Commodity Exports."
5 "Total US Agricultural Export" values come from USDA. USDA defines agriculture to include: live animals, meat, and products of livestock, poultry, and Dairy and products; hides and skins (but not leather products); animal fats and greases; food and feed grains and grain products; oilseeds and oilseed products; fruits, nuts, and vegetables and products of these; juices, wine, and malt beverages (not distilled spirits); essential oils; planting seeds; raw cotton, wool, and other fibers (not manufactured products of these); unmanufactured tobacco (not manufactured tobacco products); sugar and sugar products; coffee, cocoa, tea, and products of these; rubber and allied products; and stock for nurseries and greenhouses, spices, and crude or natural drugs. Fish, shellfish, and forestry products are not included in "agriculture."

${ }^{1}$ This table provides the total export value and export values for individual commodities to the top 15 destinations. Only commodities with export values greater than $\$ 2$ million to the destination are reported.
${ }^{2}$ Values were revised for 2011 based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.
${ }^{3}$ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.
4 "Hides and Skins" are included in the heading "Beef and Products."
${ }^{5}$ In 2012 Russia replaced Indonesia in the top 15 export destinations.

Source: University of California Agricultural Issues Center.
${ }^{1}$ The EU-27 members to which California exports are shipped reflect only the initial destination of the product, not the EU country of consumption. Many products are distributed throughout the EU after the initial entry.
2 "Other Commodities" are those that individually account for less than $\$ 100$ million in export value to the EU.
${ }^{3}$ Accurate export destination data is only available for 50 of the top 57 commodities. The commodities where export destinations are not included are apples, chickens, eggs, mushrooms, seeds for sowing, turkey and wheat. Totals may not equal due to rounding.
${ }^{4}$ The other 17 EU members include Austria, Bulgaria, Cyprus, Czech Republic, Estonia, Finland, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Romania, Slovak Republic, and Slovenia. All these countries combined account for just over 5 percent of California agricultural exports to the EU.

${ }^{1}$ Export quantities of processed goods were converted to farm fresh quantities using conversion factors published by UDSA ERS (http://www.ers.usda.gov/publications/ah697/) or annual conversion factors published by USDA NASS in annual crop summaries.
${ }^{2}$ Values for 2011 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.
${ }^{3}$ Farm quantity exported for "Dairy and Products" and products is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents.
${ }^{4}$ There is no addition for the farm quantity of milk allocated to whey exports because whey is a by-product from cheese production. Other "Dairy and Products" including casein, lactose, milk albumin, products for infant use, pudding, and rennet are converted to farm equivalent by multiplying California's share of U.S. milk production to the U.S. export quantity for these products, then applying a conversion factor of 1 pound of product to 8 pounds of milk equivalent. The same conversion factor is used for non fat dry milk.
5 "Grapes, All" includes grape juice, raisins, table grapes, and wine.
${ }^{6}$ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.
7 "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.
${ }^{8}$ The weighted average is based on each of the 53 commodity's share of production value. Values for chickens, flowers and nursery products, mushrooms and seeds for sowing are not included because reliable data on export quantity is not available.

[^0]:    Source: University of California Agricultural Issues Center.
    ${ }^{1}$ This table shows destinations that receive shares of total exports greater than or equal to 5 percent of each commodity in either 2011 or 2012 for which reliable data are available. The numbers in parentheses correspond to the 2012 ranking in Table 1 "Agricultural Commodity Export Values and Rankings, 2010-2012."
    ${ }^{2}$ Accurate export destination data are only available for 50 of the top 57 commodities. The commodities where export destinations are not included are apples, chickens, eggs, mushrooms, seeds for sowing, turkey and wheat.
    3 "Hides and Skins" are included in the heading "Beef and Products."
    ${ }^{4}$ Values were revised for 2011 based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.
    ${ }^{5}$ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.
    ${ }^{6}$ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.
